Review of the Economic Situation in 2000 and Outlook

This section presents the highlights of the economic situation in Québec in 2000 as well as the economic outlook used to prepare the Budget Plan.

The economic situation in 2000

Fourth consecutive year of robust economic growth

Thanks to strong domestic and foreign demand, the Québec economy followed the same trend as in recent years, growing by 4.3% in 2000, twice the average rate observed between 1980 and 1999. Following the excellent performance in 1999, when real GDP reached 4.7%, in 2000 Québec posted its second strongest economic growth in 12 years.

GRAPH 1.1

CHANGE IN QUÉBEC REAL GDP (annual percentage change)

1 Preliminary result.

Sources: Institut de la statistique du Québec, Conference Board of Canada and ministère des Finances du Québec.

Domestic demand was up 5.0% last year due to a marked 15.7% increase in business non-residential investment. This is the strongest upswing in domestic demand in 15 years. Foreign demand also contributed significantly to Québec's economic growth, with international exports of goods rising by 12.2%. However, the net contribution of the foreign sector to real GDP growth was attenuated by the sharp increase in imports (11.1%).

The economic performance in 2000 was better than projected by most private forecasters a year ago.

The rise in real GDP outpaced the forecasts used to prepare the 2000-2001 Budget Plan by approximately one percentage point, creating 10 000 more jobs than expected. This outcome is attributable to the stronger-than-anticipated U.S. economy and the exceptional increase in investments.

GRAPH 1.2

Positive spin-offs for the labour market

The robust growth in Québec's economy in recent years led to a substantial improvement in labour market conditions. On an annual basis, over 80 000 new jobs were created in Québec last year. This is the strongest performance recorded since the late 1980s, after that observed in 1998. Some 243 000 jobs have been created since 1997, nearly all full-time positions (232 000). Such strong job creation over a three-year period had not been seen since the mid-1980s.

For the third year in a row, job creation largely benefited young people, who obtained one quarter of all new jobs created in Québec even though they account for only 16% of the working-age population. In the past three years, nearly 30% of all new jobs have gone to young people aged 15-24.

GRAPH 1.3

NUMBER OF JOBS CREATED SINCE 1997
(in thousands)

Source: Statistics Canada.

The employment rate for persons aged 15-64, i.e. the proportion of persons in this age group who are gainfully employed, climbed considerably in 2000. Already at a peak in 1999, the employment rate for the 15-64 age group gained another 1.3 percentage points to reach 67.3% in 2000.

GRAPH 1.4

EMPLOYMENT RATE FOR PERSONS AGED 15-64
 (in percent)

Source: Statistics Canada.

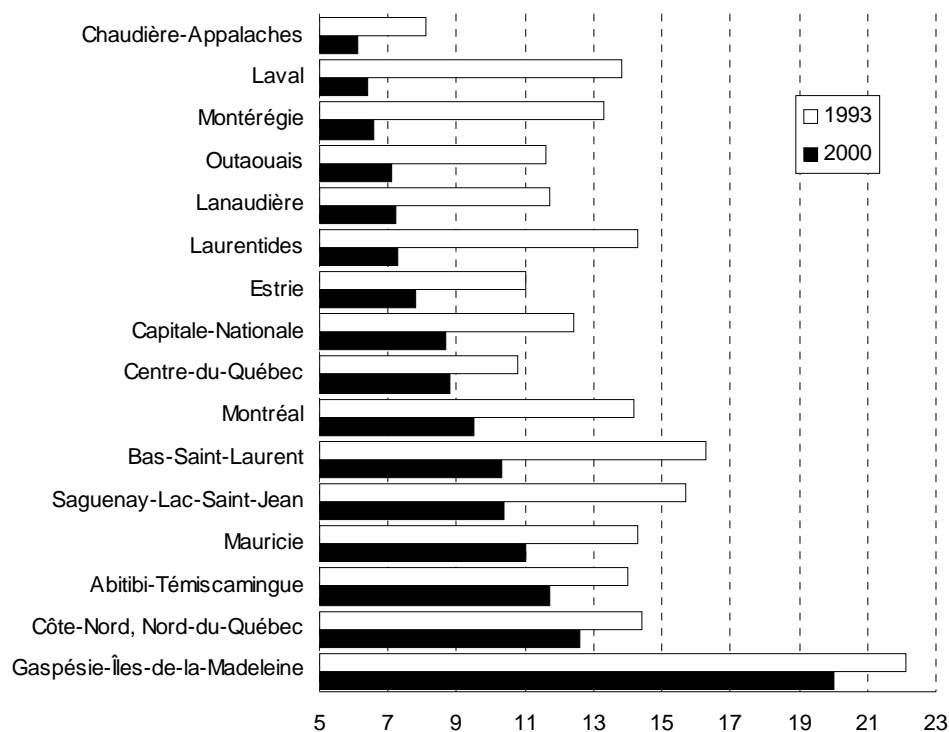

Furthermore, despite the increase in the labour force participation rate from 62.8% in 1999 to 63.2% in 2000, the unemployment rate fell to its lowest level in 25 years, averaging 8.4% in 2000. It has dropped by five percentage points since its cyclical peak in 1993.

Compared with 1999, the unemployment rate declined in nearly all of Québec's administrative regions in 2000. The largest decreases were recorded in the regions of Laval (-1.8% to 6.4%), Côte-Nord and Nord-du-Québec (-1.8% to 12.6%), Lanaudière (-1.7% to 7.2%), Abitibi-Témiscamingue (-1.7% to 11.7%) and Montérégie (-1.6% to 6.6%).

These decreases continue the trend observed since 1993. In fact, the unemployment rate has fallen significantly in all of the regions over this period.

GRAPH 1.5

UNEMPLOYMENT RATE IN QUÉBEC BY ADMINISTRATIVE REGION (in percent)

Source: Statistics Canada.

Strong domestic demand

The continued improvement of labour market conditions coupled with the personal income tax reductions sustained the high level of household confidence in Québec, which posted its highest annual rate in 12 years. This confidence resulted in a 3.6% jump in real consumer spending by Québec households in 2000, the largest annual increase since 1988, except for 1997 (4.0%).

GRAPH 1.6

GRAPH 1.7

REAL CONSUMER SPENDING
(percentage change)

Sources: Institut de la statistique du Québec and ministère des Finances du Québec.

While household consumer spending rose substantially in 2000, residential investment was sluggish, posting only 2.0% real growth due to a decline in new housing construction. The drop in housing starts from 25 700 units in 1999 to 24 700 in 2000 translated into a 5.7% decline in investment in new construction. On the other hand, real estate commissions were up 7.9% and spending on renovations, 6.9%.

The decline in housing starts in 2000 masks a major improvement in new-housing market conditions. Following a long period of market imbalance, balance was finally restored to the rental-housing sector. Montréal, for example, boasts a vacancy rate of only 1.5%, one fifth the 1993 rate of 7.7%. The vacancy rate has also declined for Québec as a whole, dropping from 3.8% in 1999 to 2.2% in 2000, the lowest level since 1985 (1.5%). Had it not been for resolving the imbalance, housing starts in Québec would have been higher in 2000.

GRAPH 1.8

RENTAL HOUSING VACANCY RATE IN QUÉBEC
(in percent)

Sources: Canada Mortgage and Housing Corporation and ministère des Finances du Québec.

Enterprises also benefited from the favourable economic setting. Increased demand and higher profits encouraged Québec enterprises to expand and modernize their production facilities in 2000. As a result, business non-residential investment rose by 15.7% in real terms, the strongest growth observed since 1987. Purchases of machinery and equipment posted the most substantial gains, at nearly 20%.

Expanding world economy

In 2000, the Québec economy continued to benefit from an external environment that was favourable to trade. According to the International Monetary Fund (IMF), the world economy grew at a rate of 4.7% in 2000, the strongest annual growth in 12 years. The vitality of the world economy is attributable to the rapid economic recovery in several Asian countries and the exceptionally robust economy in the United States.

GRAPH 1.9

WORLD REAL GDP GROWTH (in percent)

Source: International Monetary Fund, October 2000.

Sustained economic expansion in Asia

Economic growth in emerging Asian countries was better than expected last year, owing primarily to two factors:

- a more dynamic foreign demand stimulated exports to Europe and the United States; and
- the rise in oil prices was beneficial for producing countries (Indonesia, Malaysia, Singapore).

GRAPH 1.10

In Japan, on the other hand, the economic situation remained fragile. Low private consumption and major structural problems caused by the high public debt, restructuring by businesses and an aging population continued to cripple the country's economy. As a result, the unemployment rate remained relatively high in 2000, at 4.7%.

Another outstanding year for the U.S. economy

Marking the tenth year of expansion, economic activity grew by 5.0% in the United States in 2000, nearly one and a half percentage points higher than projected by American forecasters a year ago. For the fourth consecutive year, the United States saw its economy expand by over 4%.

GRAPH 1.11

REAL GDP GROWTH – UNITED STATES
(in percent)

1 At the time of the 2000-2001 Budget.
Source: Standard & Poor's *DRI*.

This economic growth was led by the steady climb in consumer spending, which was up 5.3% in 2000 due to the continued high level of confidence among American consumers. The unemployment rate reached 3.9% in September and October of last year, the lowest level since January 1970 (3.9%). Thanks to this full-employment economy, enterprises continued to invest heavily, especially in new technologies.

Due to significant gains in productivity and the strong American dollar, inflationary pressures remained under control in the United States. Growth in the consumer price index (CPI) for commodities other than food and energy rose slightly, from 2.1% in 1999 to 2.4% in 2000. The overall inflation rate climbed even more, to 3.4%, owing to the sharp increase in oil prices (57%).

Strong growth in Québec's international exports of goods

Benefiting from growing world demand and a weak Canadian dollar, international exports of goods posted another year of solid growth. The volume of exports was up by 12.2% in 2000, the highest increase since 1994.

This sharp rise is primarily attributable to the successful showing of Québec high-tech products on international markets. In 2000, exports of office, telecommunications and transportation equipment accounted for over two thirds of the increase in Québec's international exports.

Economic outlook for Québec in 2001

Slowdown in economic growth in the United States

Despite 5.0% annual growth in 2000, the U.S. economy slowed down considerably in the second half of the year owing to the tightening of monetary conditions, the rise in energy costs, the downturn in stock markets and the decline in automobile sales. Whereas the annualized growth rates were 4.8% and 5.6% in the first and second quarters of 2000, respectively, U.S. real GDP rose by only 2.2% in the third quarter and by 1.1% in the fourth quarter.

GRAPH 1.17

ECONOMIC GROWTH – UNITED STATES (annualized rate in percent)

Source: Standard & Poor's DRI.

To prevent an acceleration of inflation, U.S. monetary authorities continued to hike interest rates in 2000, a trend begun in 1999. The leading rate rose from 4.75% in June 1999 to 6.50% in June 2000. With the value of the Canadian dollar relative to the American dollar remaining at an all-time low, the Bank of Canada followed the United States' lead in all rate hikes by the U.S. Federal Reserve last year.

GRAPH 1.18

OVERNIGHT INTEREST RATE

(in percent)

Sources: Standard & Poor's *DRI* and Bank of Canada.

Monetary tightening, higher energy prices and stock market correction resulted in a slowdown in the main engine of the U.S. economy in recent years: domestic demand. This slowdown will continue in 2001. Consequently, private forecasters project 2.7% growth in domestic demand this year, half the rate recorded in 2000. The slowdown in domestic demand will cause real GDP to grow by only around 2% this year, three percentage points less than last year.

Monetary easing

The marked slowdown in the U.S. economy prompted the Federal Reserve Board to reorient its monetary policy. After six consecutive increases in the federal funds rate, the U.S. Federal Reserve took the world by surprise on January 3, 2001, when it announced, between two regular meetings, that the leading rate would be cut by 50 basis points. At the end of January, the U.S. central bank announced a further 50-point cut. On March 20, the Federal Reserve cut its leading rate by another 50 basis points.

In Canada, monetary easing should be more tempered given the dynamic domestic demand, which will be stimulated by an expansionary fiscal and budgetary policy.

Decline in inflation

Growth in the consumer price index (CPI) for commodities other than food and energy remained below the midpoint of the Bank of Canada target band (1% to 3%) throughout 2000. Between December 1999 and December 2000, the price of energy nevertheless rose by 13.6% and the price of food, by 3.2%, resulting in a 3.2% increase in the overall price index during the year.

GRAPH 1.19

CONSUMER PRICE INDEX - CANADA (annual percentage change)

Source: Statistics Canada.

The oil price rose substantially last year, reaching an average of US\$28.40 per barrel, its highest level since the mid-1980s. Experts project a decline in price in 2001. OPEC countries appear to be in a position to agree and to adjust their production so that the oil price remains around its current level of US\$25 per barrel.

The slowdown in North American economies and maintenance of world oil prices below 2000 levels should mean a decline in inflation in 2001 and a return to the midpoint of the Bank of Canada target band.

More subdued slowdown in Canada and Québec

The slowdown in economic growth should be more subdued in Canada and Québec than in the United States.

First, the signs of a downturn are not as clear as in the United States:

- real GDP growth in the second half of the year did not slow down as much as it did in the United States; and

GRAPH 1.20

REAL GDP – QUÉBEC, CANADA AND THE UNITED STATES (annualized change in percent)

Sources: Standard & Poor's *DRI*, Statistics Canada, Institut de la statistique du Québec and ministère des Finances du Québec.

- sustained job creation in Québec resulted in 41 000 new jobs between October 2000 and February 2001.

Second, the Canadian and Québec governments implemented expansionary fiscal and budgetary policies before the United States. The plan put forward by the Bush administration will not be adopted until later in 2001 and its impact may not be felt until 2002.

Third, household confidence remained high in Canada and Québec, despite falling slightly in the last quarter. The decline in consumer confidence was much sharper south of the border.

Finally, the automobile sector makes only a modest contribution to the Québec economy; therefore, the decline should primarily affect Ontario.

However, given the significant economic integration with the United States, the Canadian and Québec economies cannot avoid being affected by the economic slowdown in the United States.

Overall, real GDP should grow by 2.9% this year in Canada and by 2.7% in Québec. This will be sufficient for continued improvement in labour market conditions. Thanks to the creation of 50 000 jobs per year, Québec's unemployment rate is projected to fall from 8.4% in 2000 to below 8% by 2002.

Slower growth in exports

In 2001, Québec's international exports will feel the effects of the economic slowdown south of the border. After jumping 12.2% in 2000, growth in international exports of goods should be more subdued this year, rising by around 5.0%.

Despite the slowing down, exports are expected to grow faster than real GDP again this year. The share of international exports in GDP should therefore continue to increase.

Robust domestic demand

Once again this year, the Québec economy will be supported by fiscal and budgetary policies favourable to growth.

Thanks to major reductions in income tax and the projected decline in energy prices, households should see their purchasing power increase significantly. Real consumer spending is projected to grow by 3.5% this year (4.7% in current dollars) and by 2.6% in 2002 (4.1% in current dollars).

Market conditions in the residential sector have improved immensely in the past few years. Due to the drop in the vacancy rate, which is at its lowest level in 15 years, and the small number of unsold housing units, housing starts should reach 27 000 units this year.

However, according to the most recent Statistics Canada investment intentions survey, non-residential investment should decline by 1.4% in Québec in 2001 owing to the completion of two major investment projects: the Alcan project in Alma and the Magnola project in Asbestos. Excluding these two projects, non-residential investment should reach around 3.5% this year. And while investments in the manufacturing sector are expected to drop, they should still amount to \$5.2 billion this year, double the level in 1993 (\$2.6 billion), the low point of investments for the decade.

The Statistics Canada survey shows, among other things, that robust upswings should be recorded in the following sectors: transportation and storage (17.1%), real estate and rental services (16.9%), public services (16.3%) and communications (14.7%).

Comparison with private-sector forecasts

Private-sector forecasters are divided on the rate of Québec's economic growth this year owing to the uncertainty over the magnitude of the economic slowdown in the United States and the factors liable to attenuate its impacts on Québec. While some anticipate as much as 3.2% growth in 2001, others predict more subdued growth, as low as 2.0%. On average, private-sector forecasts predict real GDP will grow by 2.7% in Québec, the same rate that was used to prepare this Budget.

Budgetary surplus of \$500 million in 2000-2001 after reserve for health and social services, education, social solidarity and research

The government's financial transactions¹

The preliminary results of the government's financial transactions for the year ending March 31, 2001 show a budgetary surplus of \$500 million after reserve for health and social services, education, social solidarity and research, making it possible to reduce the debt (accumulated deficits) by the same amount.

Consolidated budgetary revenue for the 2000-2001 fiscal year amounts to \$50 903 million, \$2 607 million more than forecast in the last Budget. This growth in revenue may be explained by an increase of \$1 739 million in own-source revenue and of \$868 million in Government of Canada transfers.

As for consolidated budgetary expenditure, it is revised upward by \$1 157 million, to \$49 453 million in 2000-2001. This change reflects the impact of the additional resources allocated during the fiscal year, particularly for health and social services, and the new initiatives announced in the 2001-2002 Budget Speech. In addition, debt service is adjusted upward by \$239 million compared with the level anticipated at the time of the last Budget. This adjustment is essentially attributable to a weaker Canadian dollar relative to other currencies, notably the US dollar and the yen, than forecast in the Budget of last March.

This Budget announces the creation of a reserve² of \$950 million out of the budgetary surpluses posted in 2000-2001. Over the coming years, this sum will be used especially for modernizing the health and social services and education networks and for implementing new social solidarity and research initiatives.

Net financial requirements of \$432 million: \$42 million less than forecast

Consolidated net financial requirements are revised to \$432 million, a decrease of \$42 million compared with the figure anticipated in the March 2000 Budget.

With respect to financing transactions, the change in direct debt is revised upward by \$1 764 million compared with the initial forecast, mainly because of pre-financing of \$1 477 million contracted to take advantage of favourable market conditions. This has led to a temporary increase in the cash level.

¹ The data included in this section have been adjusted, for purposes of comparison, on the basis of the budgetary and financial structure that will prevail in 2001-2002. The adjustments made to the forecasts presented in the Budget Speech of March 14, 2000 are shown in Appendix 2.1.

² Section 4 presents detailed information on the creation of the reserve.

Note: A negative entry indicates a financial requirement and a positive entry, a source of financing. For the change in cash position, a negative entry indicates an increase and a positive entry, a decrease.

1 The data have been adjusted, for purposes of comparison, on the basis of the 2001-2002 budgetary and financial structure. The adjustments required for the data presented in the Budget Speech of March 14, 2000 are shown in Appendix 2.1.

2 The preliminary results for 2000-2001 are based on actual data recorded from April 2000 to January 2001 and on an estimate, as at March 16, 2001, of the February and March results for which transactions will be posted, up to the closing of the books, to 2000-2001 transactions.

3 The change in direct debt includes new borrowings less repayment of borrowings.

4 This sinking fund receives amounts to be used to cover retirement benefits payable by the government under the public and parapublic sector retirement plans. The income from this fund is accumulated in it and is subtracted from the interest expenditure recorded with regard to the retirement plans liability.

Budgetary revenue

For the 2000-2001 fiscal year, budgetary revenue totals \$50 903 million, an increase of 7.4% compared with 1999-2000. Own-source revenue grew by 4.1%, while federal transfers rose by 28.7%.

Own-source revenue

*Own-source revenue:
\$1.7 billion higher owing to
the good economic
performance*

Own-source revenue is \$1 739 million higher than forecast in the 2000-2001 Budget Speech. The better-than-anticipated economic performance in 2000 led to an increase in revenue from personal income tax, contributions to the Health Services Fund and consumption taxes. Compared with the initial forecasts, the revenue from consolidated organizations is revised downward by \$171 million.

TABLE 2.2

SUMMARY OF THE CHANGE IN OWN-SOURCE REVENUE
 (in millions of dollars)

	1999-2000				2000-2001
	Actual results	Budget Speech 2000-03-14	Preliminary results	Change compared with Budget	Change compared with 1999-2000
					%
Personal income tax	16 029	15 748	17 006	1 258	6.1
Health Services Fund	4 291	4 198	4 458	260	3.9
Corporate taxes	3 643	4 121	4 192	71	15.1
Consumption taxes	8 819	9 202	9 522	320	8.0
Government enterprises	3 943	3 428	3 457	29	- 12.3
Consolidated organizations	1 850	1 870	1 699	- 171	- 8.2
Other sources	2 472	2 423	2 395	- 28	- 3.1
Total own-source revenue	41 047	40 990	42 729	1 739	4.1

Revenue from personal income tax and contributions to the Health Services Fund is adjusted upward by \$1 258 million and \$260 million respectively. These adjustments are mainly attributable to the stronger-than-expected growth in remuneration.

Corporate tax revenue is also revised upward by \$71 million, owing to the fact that corporate profits grew more vigorously than anticipated.

Similarly, revenue from consumption taxes is up to \$320 million higher than forecast, mainly because of the additional revenue generated by the sustained growth of consumption in 2000. However, these impacts were partly offset by lower-than-expected revenue from the fuel tax, owing to high prices throughout the year, and from the tobacco tax.

The preliminary results for revenue from government enterprises show an increase of \$29 million compared with the initial forecast. The decline in the profits of certain enterprises is more than offset by the increase in Hydro-Québec's profits.

As described in Appendix 2.2, revenue from consolidated organizations is \$171 million less than anticipated in the 2000-2001 Budget Speech.

Lastly, the downward revision of amounts from other sources is explained for the most part by lower-than-expected revenue from sales of goods and services and from duties and permits, particularly for natural resources, on account of the decline in the price of softwood lumber on the North American market and the higher-than-anticipated volume of silvicultural work. However, these revisions are partly offset by higher interest income.

Federal transfers

Revenue from Government of Canada transfers for fiscal 2000-2001 amounts to \$8 174 million, an upward revision of \$868 million compared with the forecast in the March 2000 Budget Speech. This revision is explained mainly by the fact that growth in equalization revenue was stronger than expected.

TABLE 2.3

SUMMARY OF THE CHANGE IN GOVERNMENT OF CANADA TRANSFERS

(in millions of dollars)

	1999-2000				2000-2001
	Actual results	Budget Speech 2000-03-14	Preliminary results	Change compared with Budget	Change compared with 1999-2000
					%
Equalization	4 387	4 686	5 650	964	28.8
Canada Health and Social Transfer	1 120	1 777	1 597	- 180	42.6
Contributions to welfare programs	11	—	—	—	—
EPF and other transfers related to fiscal arrangements	11	11	30	19	—
Other programs	553	576	648	72	17.2
Consolidated organizations	270	256	249	- 7	- 7.8
Total Government of Canada transfers	6 352	7 306	8 174	868	28.7

Equalization revenue is \$964 million higher than forecast in last year's Budget. A more-favourable-than-expected economic context throughout Canada in 2000 resulted in higher-than-anticipated growth in the provincial revenue, particularly from the oil and natural gas sector, used to establish equalization entitlements. In addition, the federal government revised its equalization entitlements estimate for 1999-2000 upward and adjusted its payments in this regard in late 2000-2001. Apart from these factors, growth in equalization revenue was considerably weaker in 2000-2001, reflecting the good performance of the Québec economy.

However, the application of a provision placing a ceiling on the amounts paid to provinces under the equalization program reduced the amounts owed to Québec for 1999-2000 by some \$490 million. Nevertheless, since the federal government has presented draft legislation that will abolish retroactively the equalization ceiling for 1999-2000, this amount should be paid to Québec in 2001-2002.

Revenue from the Canada Health and Social Transfer (CHST) is revised downward by \$180 million, reflecting the increase in the value of the tax transfer used for the purpose of calculating the CHST, which reduces cash payments to Québec accordingly.

Revenue from other federal transfer programs is revised upward by \$72 million, mainly because of adjustments to payments for 1990-1998 under the Vocational Rehabilitation of Disabled Persons Program.

Budgetary expenditure

*Additional resources
allocated mainly to the
health and social services
sector*

Budgetary expenditure for fiscal 2000-2001 amounts to \$49 453 million, \$1 157 million more than forecast in the Budget Speech of March 14, 2000. This increase is mainly the result of the additional resources allocated to the health and social services sector and the new initiatives announced in this Budget. In all, there is a 4.4% increase in budgetary expenditure compared with 1999-2000, which is less than the growth rate of nominal GDP, i.e. 6.9%.

Total budgetary expenditure	47 369	48 296	49 453	1 157	4.4

Operating expenditure

Operating expenditure is revised to \$41 789 million, \$918 million more than forecast in the March 2000 Budget Speech.

This Budget announces a \$1 188-million increase in the program spending objective in 2000-2001. This increase is due to the additional resources of \$611 million allocated to the health and social services sector, of which nearly two thirds may be attributed to various growth factors for costs in the network. In addition, the expenditure of the Régie de l'assurance-maladie du Québec has been revised upward by \$200 million owing to the impact of the new agreements concluded with the medical federations and the additional costs of the prescription drug program for the elderly and income security recipients.

Net overruns of \$388 million have been identified in other departments, notably nearly \$118 million representing the contribution by the government as employer to financing the retirement plan improvements stemming from the new collective agreements, \$95 million owing to the higher-than-anticipated number of households receiving income security and \$70 million on account of the greater-than-expected popularity of the program to connect families to the Internet.

Lastly, the new initiatives announced in this Budget increased program spending by \$189 million.

As described in Appendix 2.2, spending by consolidated organizations is adjusted downward by \$270 million compared with the Budget Speech of March 2000.

Debt service

The results anticipated for the debt service amount to \$7 664 million, of which \$4 434 million is for the direct debt service, \$2 562 million for the interest on the net retirement plans liability and \$668 million for the debt service of consolidated organizations. This represents an upward revision of \$239 million compared with the forecast in the 2000-2001 Budget Speech.

This change essentially reflects an increase of \$277 million in direct debt service, stemming for the most part from a weaker-than-anticipated Canadian dollar relative mainly to the US dollar and the yen. In addition, interest expenditures in regard to the retirement plans are adjusted downward by \$31 million owing to an increase in deposits in the retirement plans sinking fund. The revenue of this fund is applied against the interest expenditure recorded with regard to the retirement plans liability.

Non-budgetary transactions

Net financial requirements stemming from non-budgetary transactions amount to \$932 million, \$458 million more than forecast in the March 2000 Budget Speech.

TABLE 2.5

SUMMARY OF NON-BUDGETARY TRANSACTIONS

(in millions of dollars)

Non-budgetary surplus (shortfall)	- 474	- 932	- 458

Note: A negative entry indicates a financial requirement and a positive entry, a source of financing.

1 Details shown in Table 2.17.

Preliminary results for investments, loans and advances indicate an \$852-million increase in funding requirements compared with the initial forecast. This difference is attributable to the fact that certain assets were not disposed of owing to rather unfavourable market conditions.

The \$5-million rise in capital expenditures is explained mainly by lower-than-expected net investments by departments and agencies compared with the level anticipated at the time of the last Budget.

The annual surplus of the retirement plans liability, estimated at \$1 726 million in the last Budget, is revised upward by \$23 million, to \$1 749 million. This change stems from the upward adjustment of \$130 million resulting essentially from the increase in government contributions as employer, which is offset by disbursements that are \$107 million higher than initially forecast.

Transactions related to other non-budgetary accounts represent year-to-year changes in these financial items. These accounts, which include, in particular, cash and bills on hand, outstanding cheques, accounts receivable and accounts payable, can fluctuate a great deal because of the variability of government cash inflow and disbursements. For 2000-2001, the balance of the other accounts shows an increase of \$423 million compared with the figure announced in the March 2000 Budget Speech.

In regard to consolidated organizations, the \$57-million downward adjustment stems for the most part from slower-than-anticipated cash inflow for certain special funds.

Debt representing accumulated deficits

In 2000-2001, Québec will post a budgetary surplus for the third year in a row. The \$500-million surplus anticipated for this fiscal year will make it possible to reduce the debt (accumulated deficits) as at March 31, 2001 by the same amount.

This concept of debt corresponds to deficits accumulated and budgetary surpluses achieved over the years. Several Canadian jurisdictions use concepts of surplus or accumulated deficits as an indicator of the change in their financial position. This indicator has been used in Québec's Public Accounts for several years.

It is important to specify that there is a difference between reducing the debt that represents accumulated deficits and reducing borrowings that have been contracted by the government. For example, the government may decide to increase its borrowings during a given fiscal year in order to take advantage of favourable market conditions without any effect on the debt representing accumulated deficits.

Thus the surpluses anticipated at the end of this fiscal year will make it possible to reduce the debt (accumulated deficits) of \$82 193 million as at March 31, 2000 to \$81 693 million as at March 31, 2001.

CHANGE IN DEBT REPRESENTING ACCUMULATED DEFICITS

1 Preliminary results.

2 Excluding pre-financing of \$506 million in 1999-2000 and \$1 477 million in 2000-2001. Including pre-financing, the total debt reaches \$101 052 million in 1999-2000 and \$104 257 million in 2000-2001.

Financing

Preliminary results show that the change in direct debt amounts to \$2 955 million, \$1 764 million more than forecast in the 2000-2001 Budget Speech. Borrowings in fiscal 2000-2001 amount to \$8 581 million (\$7 580 million for the Consolidated Revenue Fund and \$1 001 million for consolidated organizations), \$2 356 million more than anticipated in the last Budget Speech.

Note: A negative entry indicates a financial requirement and a positive entry, a source of financing. For the change in cash position, a negative entry indicates an increase and a positive entry, a decrease.

Financing of the Consolidated Revenue Fund

Preliminary results show that the change in the direct debt of the Consolidated Revenue Fund amounts to \$2 985 million, an increase of \$1 866 million compared with the forecast in the 2000-2001 Budget Speech. Borrowings in fiscal 2000-2001 amount to \$7 580 million, \$2 310 million more than anticipated in the last Budget. This increase in borrowings is due mainly to the decision to take advantage of favourable market conditions in order to contract, in late 2000-2001, borrowings that would normally have been made in early 2001-2002. These pre-financing transactions totalled \$1 477 million. The increase in borrowings is also explained by the fact that repayments were \$444 million higher than expected, while additional deposits of \$137 million were made in the retirement plans sinking fund.

Owing to pre-financing, the cash level was increased by \$971 million, although a \$758-million decrease was forecast in last year's Budget Speech.

Financing of consolidated organizations

Preliminary results show that the change in the direct debt of consolidated organizations amounts to \$30 million. This is a downward revision of \$102 million compared with the forecast in the Budget Speech of last March. The repayment of borrowings in fiscal 2000-2001 amounts to \$1 031 million, an increase of \$148 million compared with the amount expected in last year's Budget Speech.

This revision is attributable to three factors: a \$60-million decrease in long-term financial requirements, given that the anticipated financing was carried out through a reduction in the cash level, a \$42-million reduction in the anticipated net financial requirements of consolidated organizations, and the \$46-million upward revision in borrowings contracted during the fiscal year.

Borrowings

In all, the government contracted borrowings of \$8 581 million in 2000-2001, of which \$7 580 million was for Consolidated Revenue Fund needs (including \$2 014 million to make deposits in the retirement plans sinking fund) and \$1 001 million for consolidated organizations.

Realization of the financing program was characterized by the exceptional receptivity of financial markets to Québec securities.

In all, 76% of the financing program, or \$6 543 million, was conducted on the Canadian market. The government carried out on this market seven public issues of negotiable bonds for a total of \$2 869 million, and real return issues for a total of \$143 million. Private investments totalling \$2 267 million were made with the Caisse de dépôt et placement du Québec, and \$741 million were obtained through the issue of medium-term notes. Lastly, savings products sold by Placements Québec should provide the government with \$520 million in financing.

Borrowings totalling \$2 038 million, or 24% of the financing program, were obtained on foreign markets as part of the government's financing sources diversification strategy. Three bond issues were made on these markets. First, a global bond issue in US dollars for US\$1 billion (CAN\$1 493 million) was carried out in January 2001. A bond issue intended for the retail market was then made on the euro market for €150 million (CAN\$213 million). Lastly, the government carried out a first public bond issue on the Australian market for AUS\$400 million (CAN\$315 million). Québec is the first government in Canada to make a public bond issue on this market.

YIELD ON SHORT-TERM SECURITIES

Repayment of borrowings

Preliminary results show that the repayment of borrowings of the Consolidated Revenue Fund and consolidated organizations for fiscal 2000-2001 amounts to \$5 626 million, \$592 million more than forecast in the Budget Speech of March 14, 2000.

Repayment of borrowings of the Consolidated Revenue Fund

Preliminary results show that the repayment of borrowings of the Consolidated Revenue Fund amounts to \$4 595 million, \$444 million more than anticipated in the Budget Speech of last March.

This rise is explained mainly by an increase in the redemption of savings products, the higher-than-anticipated revenue of the retirement plans sinking fund, which is recorded as repayments, and the payments made under the credit policy relating to interest rate and currency swap agreements.

Repayment of borrowings of consolidated organizations

Preliminary results show that the repayment of borrowings of consolidated organizations for fiscal 2000-2001 amounts to \$1 031 million, \$148 million more than forecast in the last Budget Speech.

Total government debt

The government's total debt consists of the consolidated direct debt and the net retirement plans liability. The consolidated direct debt is the sum of the direct debt of the Consolidated Revenue Fund and the debt of consolidated organizations. As for the net retirement plans liability, it consists of the retirement plans liability minus the balance of the retirement plans sinking fund (RPSF), an asset that may eventually be used to pay the retirement benefits of public and parapublic sector employees.

According to the preliminary data, the consolidated direct debt amounts to \$65 185 million as at March 31, 2001, or \$61 396 million as direct debt of the Consolidated Revenue Fund and \$3 789 million as debt of the consolidated organizations.

It should be noted that an amount of \$1 477 million included in the consolidated direct debt represents pre-financing in 2000-2001 that will be used to cover part of the borrowings to be made in 2001-2002. Excluding this pre-financing, the consolidated direct debt of the Québec government amounts to \$63 708 million as at March 31, 2001, including \$59 919 million as direct debt of the Consolidated Revenue Fund.

The net retirement plans liability totals \$39 072 million as at March 31, 2001 and consists of \$46 126 million as the retirement plans liability minus the value of the RPSF, or \$7 054 million.

Excluding pre-financing, the total debt is \$102 780 million.

TABLE 2.8

TOTAL ANTICIPATED GOVERNMENT DEBT AS AT MARCH 31, 2001 (in millions of dollars)

	Consolidated direct debt			Retirement plans liability	Total debt
	Direct debt of the Consolidated Revenue Fund	Consolidated organizations	Total		
Anticipated debt as at March 31, 2001	61 396	3 789	65 185	46 126	111 311
Retirement plans sinking fund	—	—	—	– 7 054	– 7 054
Pre-financing	– 1 477	—	– 1 477	—	– 1 477
Total	59 919	3 789	63 708	39 072	102 780

Structure of the government's total debt

As at March 31, 2001, the proportion of the consolidated direct debt in Canadian dollars amounts to 68.0% and the proportion in foreign currency, 32.0%. If the net retirement plans liability, for which all commitments are in Canadian dollars, is also taken into account, the proportion of the total debt in Canadian dollars rises to 80.0%.

TABLE 2.9

TOTAL ANTICIPATED GOVERNMENT DEBT AS AT MARCH 31, 2001 INCLUDING THE IMPACT OF CURRENCY SWAPS (in millions of dollars)

Sub-total	61 396	100.0	3 789	65 185	100.0	39 072	104 257	100.0
Pre-financing	- 1 477		—	- 1 477		—	- 1 477	
Total	59 919		3 789	63 708		39 072	102 780	

Note: The debt in foreign currency is expressed in the Canadian equivalent at the exchange rates effective on February 28, 2001.

Structure of the direct debt of the Consolidated Revenue Fund

The proportion of the direct debt of the Consolidated Revenue Fund in Canadian dollars amounts to 66.3% and the proportion in foreign currency, 33.7%. At the end of the current fiscal year, the share at fixed rates amounts to 53.4%, while the share at variable rates stands at 46.6%.

The weighted average maturity of this debt, excluding savings bonds and Treasury bills, rose from 11.4 years as at March 31, 2000 to 11.8 years as at March 31, 2001.

Savings products outstanding should total \$2 688 million and represent 4.4% of this debt. Treasury bills outstanding total \$1 772 million, or 2.9% of the direct debt of the Consolidated Revenue Fund.

Net retirement plans liability

The retirement plans liability is the recorded value of government commitments with regard to the retirement plans of public and parapublic sector employees. As at March 31, 2001, this value amounts to \$46 126 million.

In 1993, the government created the retirement plans sinking fund (RPSF), which constitutes a cash reserve that may eventually be used for paying the retirement benefits of public and parapublic sector employees. It is managed by the Caisse de dépôt et placement du Québec (CDPQ).

As at March 31, 2001, the value of the RPSF amounts to \$7 054 million, \$2 014 million more than the previous year. This increase is due to deposits of \$1 606 million made by the government in 2000-2001 and investment income of \$408 million.¹

As at March 31, 2001, the net retirement plans liability totals \$39 072 million.

The government contracts borrowings on financial markets in order to make deposits in the RPSF. It should be noted that the amounts deposited in the RPSF do not affect the government's total debt. The amount of borrowings contracted to make deposits in the RPSF increases the direct debt of the Consolidated Revenue Fund while reducing the net retirement plans liability by the same amount.

To analyze the change in the components of the direct debt of the Consolidated Revenue Fund from one fiscal year to the next, it is important to exclude the impact of the RPSF.

As shown in the following table, the direct debt of the Consolidated Revenue Fund rose by \$2 263 million between March 31, 2000 and March 31, 2001 (after adjustment to take pre-financing into account). However, this increase is essentially due to the substantial deposits made in the RPSF in 2000-2001. If the value of the RPSF as at March 31 of each fiscal year were subtracted from the direct debt of the Consolidated Revenue Fund, it can be noted that this debt, in the absence of the RPSF, would have increased by \$249 million, while the retirement plans liability would have risen by \$1 749 million.

1 Investment income from the RPSF is calculated according to the rate of return used for the actuarial valuations of the retirement plans. The rate is changed every three years when new actuarial valuations are carried out, and the income from the fund is adjusted to reflect the real income recorded over the three previous years.

Net borrowings	4 706	2 630	987	3 761	140

1 Preliminary results.

2 Amounts borrowed during the calendar year for the requirements of the Consolidated Revenue Fund, excluding less-than-one-year net borrowings made as long-term financing transactions, which explains the difference between this list and the list of borrowings made over the fiscal year given later in this text. These amounts also exclude borrowings to cover the requirements of consolidated organizations, non-consolidated organizations and Financement-Québec, which are distributed among the organizations and networks for which they were intended.

3 Amounts borrowed during the calendar year, excluding less-than-one-year net borrowings made as long-term financing transactions.

Gross borrowings in Canadian dollars totalled \$13 243 million in 2000, or 96.7% of total borrowings by the public sector. Gross borrowings in US dollars reached \$192 million, or 1.4% of the total, while those in other currencies amounted to \$255 million, or 1.9% of the total.

Taking repayments into consideration, net public sector borrowings are estimated at \$140 million in 2000. The ratio of net borrowings to gross domestic product rose from 1.84% of GDP in 1999 to 0.06% in 2000.

Total	6 589	6 008	6 572	6 183	7 338

1 Preliminary results.

2 Government investments include its capital expenditures as well as grants and loans for investments made available to economic agents outside the public sector. Financial investments in other components of the public sector are therefore excluded.

Sources: Public Accounts of the gouvernement du Québec, Secrétariat du Conseil du trésor and ministère des Finances du Québec.

3 Investments by school boards, colleges, universities and health and social services institutions include the share paid by the government and that paid by the institutions themselves. It should be noted that the share paid by the government is financed by subsidies for the debt service.

Source: Secrétariat du Conseil du trésor.

4 Financial investments and commercial programs were excluded beginning in 1997.

Source: Hydro-Québec.

5 Investments by government enterprises correspond to the increase in long-term assets. Investments of the Société québécoise d'assainissement des eaux are included under "municipal bodies".

Sources: Financial statements of the enterprises of the gouvernement du Québec and ministère des Finances du Québec.

6 Investments by municipal bodies include those related to water purification, public transportation and cultural and community facilities, as well as other municipal investments.

Sources: Secrétariat du Conseil du trésor, ministère des Affaires municipales et de la Métropole and ministère des Finances du Québec.

The following table presents a comparative analysis of borrowings and investments by the public sector as a whole. Total net public sector borrowings include, in addition to the net long-term borrowings mentioned earlier, less-than-one-year borrowings made as long-term financing transactions, including Treasury bills and Treasury notes issued by the government, and the annual surplus of the government retirement plans liability. Over the four preceding years, net public sector borrowings were systematically lower than public sector investments. In 2000, the ratio of net borrowings to investments was – 0.20.

Financing transactions				
Change in cash position	473	- 1 983	2 246	- 509
Change in direct debt ²	1 295	2 490	- 132	2 955
Retirement plans sinking fund ³	- 84	- 1 030	- 2 831	- 2 014
Total financing of transactions	1 684	- 523	- 717	432

Note: A negative entry indicates a financial requirement and a positive entry, a source of financing. For the change in cash position, a negative entry indicates an increase and a positive entry, a decrease. For purposes of comparison, the data are presented on the basis of the 2001-2002 budgetary and financial structure.

1 The preliminary results for 2000-2001 are based on actual data recorded from April 2000 to January 2001 and on an estimate, as at March 16, 2001, of the February and March results for which transactions will be posted, up to the closing of the books, to 2000-2001 transactions.

2 The change in direct debt includes new borrowings less repayment of borrowings.

3 This sinking fund receives amounts to be used to cover retirement benefits payable by the government under the public and parapublic sector retirement plans. The income from this fund is accumulated in it and is subtracted from the interest expenditure recorded with regard to the retirement plans liability.

1 Financement-Québec is a government enterprise that was created in 1999-2000 to make loans to certain public sector establishments in Québec, particularly those in the health and social services network and the education network. Previously, these establishments contracted borrowings from the Financing Fund. Financement-Québec makes borrowings on financial markets in its own name, with guarantees from the government.

2 Borrowings in foreign currency given in Canadian equivalent of their value on the date of borrowing.

3 Interest payable semi-annually except if another frequency is indicated in a note.

4 Yield to investor is determined on the basis of interest payable semi-annually.

5 Interest payable quarterly.

1 The adjustments required to make the data from the 2000-2001 Budget comparable with those from the 2001-2002 Budget stem from the implementation of the family policy regarding subsidized day care spaces in day care centres, which increases revenue and expenditure by \$43 million.

Section 2

Appendix 2.2

Results of consolidated organizations

Results of consolidated organizations

Revenue from consolidated organizations totals \$1 948 million, a decrease of \$178 million compared with the Budget Speech of last March. Expenditure totals \$1 766 million, a decrease of \$277 million. These changes are mainly attributable to the higher-than-expected volume of transactions carried out by these organizations in the government's reporting entity.

Net results for consolidated organizations show a surplus of \$182 million, \$99 million more than forecast in the Budget Speech of March 2000. Results are better than anticipated for certain organizations, notably the Fonds de lutte contre la pauvreté par la réinsertion au travail and Investissement-Québec.

3.3 Additional information on the budgetary revenue forecast for 2001-2002	27
3.4 Additional information on the government's financial position	33

This section of the 2001-2002 Budget Plan indicates the Québec government's budgetary and financial stance. It presents revenue, expenditure, budget balance, and net financial requirements or surplus forecasts in light of the economic assumptions adopted and the fiscal and budgetary policies announced in this Budget Speech.

A balanced budget, income tax reductions and additional resources for public services

The government forecasts a budgetary surplus after reserve of \$500 million for fiscal 2000-2001. The budget will remain balanced in subsequent fiscal years, as prescribed by the *Act respecting the elimination of the deficit and a balanced budget*.

P: Preliminary results for 2000-2001 and forecasts for subsequent years.

1 Based on the budgetary and financial structure in effect in 2001-2002.

Substantial additional revenue was posted for fiscal 2000-2001 and 2001-2002 compared with the forecasts presented in the Budget Speech of last March. These excess amounts have allowed the government:

- to further reduce personal income tax. Reductions of up to \$3.5 billion over the next three years are announced.
- to devote more resources to public services. In this regard, the government has boosted spending substantially, particularly for the health and social services sector, education and the fight against poverty and exclusion. Moreover, additional resources are being provided to support economic development in the regions.
- to allocate \$950 million to a reserve. Over the coming years, these funds may be used notably for modernizing the health and social services and education networks and for implementing new social solidarity and research initiatives.
- to reduce government debt by \$500 million.

Total net financial requirements will be \$432 million in 2000-2001 and \$770 million in 2001-2002.

No net financial requirements are forecast for the Consolidated Revenue Fund in 2000-2001 and 2001-2002. Net financial surpluses of \$500 million are anticipated for fiscal 2002-2003.

The net financial requirements of consolidated organizations will amount to \$432 million in 2000-2001 and \$770 million in 2001-2002. These requirements stem for the most part from capital investments, particularly for the Fonds de conservation et d'amélioration du réseau routier.

A marked improvement in the financial situation

The government's financial situation has improved considerably in recent years. While the budgetary deficit accounted for 3.4% of gross domestic product in 1994-1995, it was gradually eliminated thereafter. Since 1998-1999, the government has recorded surpluses. It intends to continue to achieve a balanced budget in the years to come.

GRAPH 3.1

BUDGETARY DEFICIT AND NET FINANCIAL REQUIREMENTS (as a percentage of GDP)

P: Preliminary results for 2000-2001 and forecasts for subsequent years.

The achievement of a budgetary surplus of \$500 million after reserve in 2000-2001 will lead to a reduction of the debt (accumulated deficits) as at March 31, 2001 by the same amount.

Several Canadian jurisdictions use the concept of accumulated deficits as an indicator of the change in their financial situation. This indicator, which has been used in Québec's Public Accounts for several years, is different from concepts of direct debt and total government debt, which refer to borrowings outstanding and to commitments with regard to the retirement plans of public and parapublic sector employees.

The debt (accumulated deficits) as at March 31, 2001 totals \$81 693 million, or \$500 million less than as at March 31, 2000. It will remain stable throughout the forecast period.

TABLE 3.2

CHANGE IN THE DEBT REPRESENTING ACCUMULATED DEFICITS
(in millions de dollars)

	2000-2001 ^P	2001-2002 ^P	2002-2003 ^P

Less			
<i>Budgetary surplus after reserve</i>	<i>500</i>	<i>0</i>	<i>0</i>
Closing balance	81 693	81 693	81 693

P: Preliminary results for 2000-2001 and forecasts for subsequent years.

1 1999-2000 closing balance as shown in the 1999-2000 Public Accounts.

The government's indebtedness rate continues to decline

The gradual elimination of the deficit has resulted in a reduction in the government's indebtedness rate. As a proportion of GDP, the debt (accumulated deficits) will gradually decline, reaching 34.6% as at March 31, 2003, a drop of over 21% in just five years.

GRAPH 3.2

DEBT REPRESENTING ACCUMULATED DEFICITS
(as a percentage of GDP)

P: Preliminary results for 2000-2001 and forecasts for subsequent years.

The interest on the debt represents an increasingly smaller share of government revenue

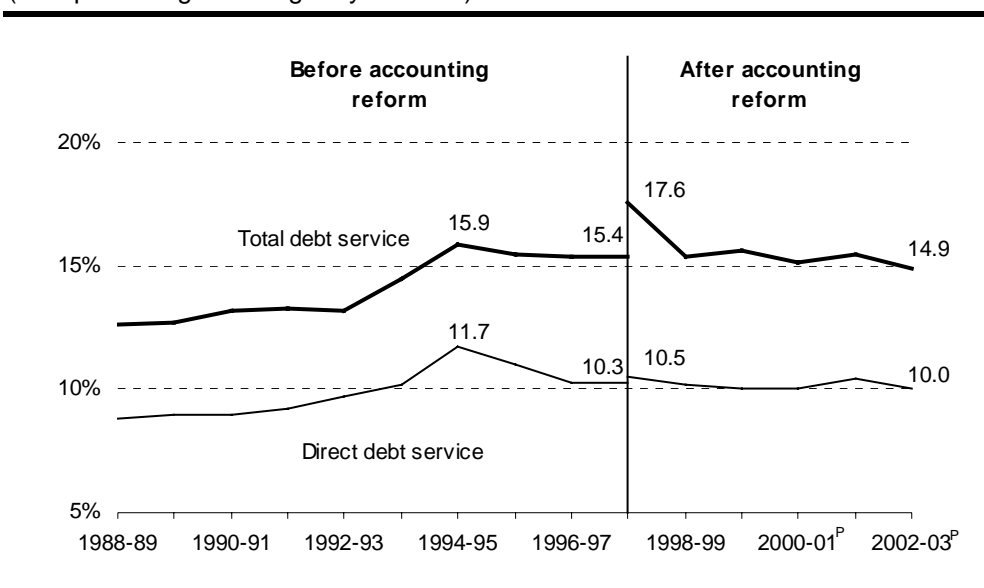

The portion of budgetary revenue allocated to direct debt service should amount to around 10% over the forecast period. It should be noted that direct debt service does not include interest on the net retirement plans liability and includes the debt service of consolidated organizations.

The portion of budgetary revenue allocated to total debt service should continue to decline. Amounting to 17.6% in 1997-1998, it should be 14.9% in 2002-2003.

GRAPH 3.3

DEBT SERVICE

(as a percentage of budgetary revenue)

P: Preliminary results for 2000-2001 and forecasts for subsequent years.

Government revenue

Budgetary revenue

The government's budgetary revenue should total \$51 136 million in 2001-2002, i.e. \$41 652 million in own-source revenue and \$9 484 million in federal transfers. After rising 7.4% in 2000-2001, budgetary revenue should grow by 0.5% in 2001-2002 and 2.4% in 2002-2003.

TABLE 3.3

1 For the calendar year ending three months before the end of the fiscal year.

Own-source revenue

Overall, own-source revenue should rise by 4.1% in 2000-2001 compared with the preceding year. Substantial increases will be recorded for income taxes and other taxes, owing to strong growth in the major tax bases.

However, revenue from government enterprises will fall by 12.3% in 2000-2001 on account of a decline in the profits of the Commission de la santé et de la sécurité du travail and the Société de l'assurance automobile du Québec. As for the 8.2% drop in the revenue of consolidated organizations, it is explained mainly by the fact that the Fonds spécial de financement des activités locales ceased its operations on December 31, 2000.

TABLE 3.4

% change	4.1	- 2.5	2.8
Nominal GDP growth rate in % ¹	6.9	4.0	4.0

P: Preliminary results for 2000-2001 and forecasts for subsequent years.

1 For the calendar year ending three months before the end of the fiscal year.

Own-source revenue is expected to decrease by 2.5% in 2001-2002, particularly because of the fiscal measures announced in this Budget and in those of previous years. The slowdown in the growth rate will be especially pronounced with regard to personal income tax, the Health Services Fund and corporate taxes. In 2002-2003, despite growth of 4% in nominal GDP, the increase in own-source revenue should be limited to 2.8%, given that the full impact of the fiscal measures announced will be felt that year.

Change in revenue by source:

- Personal income tax, the main source of government revenue,¹ should decline by 6.5% in 2001-2002, to \$15.9 billion. During this fiscal year, the increase in tax revenue arising from growth in income subject to tax will be more than offset by the impact of the income tax reductions announced in this Budget and those of previous years. In 2002-2003, the increase in revenue will amount to only 1.5%, which is compatible with the rise in income subject to tax, taking the growing impact of reductions in the tax burden into account.
- Health Services Fund contributions should amount to \$4.4 billion in 2001-2002, a level equal to that observed the preceding year. The increase stemming from the growth in wages and salaries is entirely offset by the impact on the Health Services Fund of the tax holiday granted in this Budget to manufacturing enterprises in resource regions and by the reduction in the contribution rate of small and medium-sized enterprises effective since January 1, 2001. This reduction is the last of the gradual reductions introduced as part of the corporate taxation reform announced in the 1998-1999 Budget. In 2002-2003, Health Services Fund contributions are expected to rise by 3.4% owing particularly to the growth in wages and salaries.
- The 4.3% rise in revenue anticipated in corporate taxes in 2001-2002 is due to the growth expected in corporate profits, although this effect will be partly offset by the impact of the measures announced in this Budget. In 2002-2003, revenue should increase by 2.5% given the anticipated slowdown in the growth of corporate profits in 2002 and the impact of the fiscal measures announced.

¹ Appendix 3.3 presents the breakdown of the main sources of the government's own-source revenue since 1970-1971.

- Consumption tax revenue should increase by 2.3% in 2001-2002 and 2.8% in 2002-2003, which is comparable to the rate of growth in household consumption, taking into account the change in refund applications submitted by businesses in respect of taxes already paid for goods and services they acquire.
- Revenue from government enterprises should fall by 5.8% in 2001-2002, reflecting the anticipated decline in profits of the Commission de la santé et de la sécurité du travail. In 2002-2003, revenue is expected to increase by 7.2%, owing notably to the anticipated growth in Hydro-Québec's profits.
- Revenue from consolidated organizations should drop by 2.2% in 2001-2002 particularly because of the impact over a full year of the termination of the activities of the Fonds spécial de financement des activités locales on December 31, 2000. In 2002-2003, revenue from consolidated organizations should rise by 7.3% on account of anticipated growth in revenue from the Fonds de l'assurance-médicaments.

Link between growth in own-source revenue and economic growth

Broadly speaking, growth in own-source revenue is expected to match nominal economic growth. Once the financial impact of fiscal measures and certain extraordinary revenue has been taken into account, the average annual growth rate for own-source revenue over the next two years should be 4.3%, compared with a 4.0% increase in gross domestic product.

2 Sources: 1998-1999, 1999-2000, 2000-2001 and 2001-2002 Budget Speeches, Additional Information on the Budgetary Measures.

3 Non-recurring impact of retroactive wage and pay equity payments of nearly \$1.1 billion to Québec government employees and pay equity payments totalling \$875 million to federal employees.

4 Elasticity measures the link between growth in revenue before various measures and growth in gross domestic product. An elasticity of 1.00 means that a 1% increase in gross domestic product will result in a 1% increase in own-source revenue.

Own-source revenue as a proportion of gross domestic product, including consolidated organizations, amounted to 20.1% in 1999-2000. Given the tax reductions announced in this Budget and in those of previous years, the ratio should decline over the forecast period, to 18.1% in 2002-2003.

GRAPH 3.4

CHANGE IN OWN-SOURCE REVENUE
(as a percentage of GDP)

F: Forecast.

Federal transfers

Federal transfers should grow by 16.0% in 2001-2002, reflecting essentially the planned withdrawal of \$1 004 million from the Canada Health and Social Transfer (CHST) trust accounts.

Equalization revenue will fall in 2001-2002 despite the fact that the federal government will pay nearly \$500 million as a retroactive adjustment stemming from its commitment to suspend for 1999-2000 the application of a ceiling in respect of the program. This ceiling would have limited equalization entitlements for 1999-2000 to \$10 billion for provinces that receive equalization payments as a whole. However, the most recent federal calculations suggest that equalization entitlements will exceed this ceiling by approximately \$800 million. Even though Québec receives only 49% of equalization payments, it would have suffered the equivalent of 62% of the cuts made following the application of the ceiling, which is equal to its share of the population of provinces that receive equalization payments. This amount will be repaid to it in 2001-2002.

In 2002-2003, federal transfers will grow by only 0.8%, reflecting a substantial decline in withdrawals from the CHST trust accounts.

In regard to consolidated organizations, transfer revenue will rise by over \$100 million in 2001-2002, owing notably to the creation of the Financière agricole du Québec, which groups the activities of the Société de financement agricole and the Régie de l'assurance-agricole du Québec. Previously, revenue from federal transfers paid to the Régie was not included in the government's reporting entity.

CHST trust accounts

The federal government created three CHST trust accounts at the time of its last two budgets and in September 2000 in conjunction with the federal-provincial First Ministers' meeting. The amount allotted to Québec in the three trust accounts totals \$1 675 million.

The financial plan of this Budget renews the withdrawals provided for in Québec's March 2000 Budget. It also provides for the withdrawal in 2001-2002 of the amounts relating to the trust account created last fall, i.e. \$239 million.

All told, the Québec government will have withdrawn \$420 million from the trust accounts in 2000-2001. Withdrawals of \$1 004 million and \$251 million respectively are planned for the next two years.

TABLE 3.7

WITHDRAWALS FROM THE CHST TRUST ACCOUNTS

(in millions of dollars)

	2000-2001	2001-2002	2002-2003	2003-2004	Total
2000-2001 Budget	420	765	256	—	1 441
2001-2002 Budget					
□ 1999-2000 allotment	420	420	—	—	840
□ 2000-2001 allotment	—	345	251	—	596
Sub-total	420	765	251¹	—	1 436¹
□ Federal announcement of September 2000	—	239	—	—	239
Total	420	1 004	251	—	1 675

1 When the Budget was tabled last year, Québec's allotment in the federal trust account created in 2000-2001 was estimated at \$600 million. In comparison, the federal government set Québec's share at \$596 million.

However, it should be noted that despite the trust accounts and the federal reinvestments in the CHST announced in September 2000, the federal contribution to Québec's health, education and income security programs will pursue the downward trend observed since the early 1980s. While federal funding accounted for 23% of Québec's spending for these programs in the mid 1980s, it will account for barely 13.9% in 2005-2006.

GRAPH 3.5

 (as a percentage of Québec's social spending²)

P: Preliminary results for 2000-2001 and forecasts for subsequent years.

1 Including the value of the special Québec abatement.

2 Health, education and income security spending.

Government expenditure

The government's budgetary expenditure should total \$51 136 million in 2001-2002. Operating expenditure will amount to \$43 226 million, while debt service will total \$7 910 million.

Operating expenditure includes the program spending of government departments and the expenditures of consolidated organizations. Similarly, debt service includes the debt service of the Consolidated Revenue Fund and that of consolidated organizations.

1 For the calendar year ending three months before the end of the fiscal year.

Program spending

Program spending will grow by 3.0% in 2001-2002 and 3.1% in 2002-2003. This growth rate is less than that of nominal GDP, which is compatible with the government's objectives in terms of maintaining a balanced budget and reducing taxes.

The ratio of the government's program spending to GDP should continue to fall, to 18.5% in 2001-2002 and 18.3% in 2002-2003, the lowest level in at least 30 years.

GRAPH 3.6

PROGRAM SPENDING (as a percentage of GDP)

P: Preliminary results for 2000-2001 and forecasts for subsequent years.

¹ The increase in the program spending/GDP ratio in 1998-1999 is attributable to expenditures of \$1 377 million to implement the financial restructuring and consolidation plan for health and social services network institutions and to improve the financial situation of universities.

Section 3

Appendix 3.1

Resources allocated to health and social services

The health and social services sector accounts for a large share of the government's program spending. Benefiting from nearly 40% of such spending, it is the most important expenditure sector in this regard. It should be noted that public spending on health in Québec accounted for 7.2% of GDP in 1998.

Major increase in resources allocated to health and social services in recent Budget Speeches

Since the achievement of a balanced budget in 1998-1999, the health and social services sector has reaped a large share of the benefits of the improvement in Québec's public finances. In the last two Budget Speeches, additional resources were allocated primarily to three main priorities:

- improving the financial situation of network institutions to ensure the accessibility and quality of health services offered to Quebecers;
- increasing and developing services, particularly to reduce waiting lists, provide more services to various network clienteles and finance increases in the cost of the prescription drug insurance program;
- acquiring specialized, high-technology medical equipment to make it possible to treat more patients and improve the quality of care.

Resources are increased again for health and social services

To further boost the quality and quantity of health and social services, the government is granting additional resources to this sector. It will devote \$10 million in 2001-2002, \$15 million in 2002-2003 and \$20 million thereafter to improving services for young people and their families. In addition, government financial support for home care services provided by social economy enterprises is being extended and will amount to \$32 million per year. Over and above these new initiatives are the higher costs relating to increases in wages and clientele and the growth in the cost of the prescription drug insurance program.

In all, the budget allocated to the ministère de la Santé et des Services sociaux will reach \$16 716 million in 2001-2002. Since 1997-1998, the budgets earmarked for health and social services will have risen by 29.4%, almost three times the growth rate of other program spending as a whole (11.4%).

TABLE 3.1.1

CHANGE IN HEALTH AND SOCIAL SERVICES EXPENDITURES

(in millions of dollars)

	1997-1998	1998-1999	1999-2000	2000-2001		2001-2002 ^F	Cumulative growth %

F: Forecast.

1 Appropriations adjusted to reflect the new program structure.

2 Increase compared with the envelope provided last March for 2000-2001.

Compared with the envelope provided last March for 2000-2001, which totalled \$15 382 million, the appropriations allocated to the ministère de la Santé et des Services sociaux for 2001-2002 are increased by \$1 334 million.

In addition, a sum of \$30 million, financed out of Loto-Québec's revenue, will be used to develop a range of services adapted to the needs of older persons who are losing their autonomy.

These additional resources are supplemented by \$600 million that are being placed in reserve this year and that may be used to finance projects for modernizing the health and social services network over the coming years.

Therefore, the health and social services sector will receive additional resources totalling \$1 964 million.

Section 3

Appendix 3.2

Resources allocated to education

The education sector accounts for a large share of the government's program spending. Benefiting from over a quarter of such spending, it is the second most important sector in this regard after health and social services.

Québec compares favourably with other jurisdictions in respect to education

Compared with other countries, Québec invests to a greater extent in education. It devotes 7% of its gross domestic product (GDP) to this sector, while OECD countries as a whole devote an average of 5.9% of GDP to education. The difference in investment levels is even more marked when Québec's post-secondary education sector is compared with that of other jurisdictions.

Québec's education system is also distinguished by its accessibility. In particular, tuition fees for Québec students are less than half those charged in the rest of Canada. In addition, student financial assistance is more generous in Québec, with the result that students' indebtedness level is much lower than in the other Canadian provinces. It should also be mentioned that Québec's enrolment rate, i.e. 78%, is the highest of all OECD countries, i.e. 63% on average.

The quality of teaching in Québec also compares favourably with that of other jurisdictions. The number of students per teacher at the elementary and secondary levels is lower in Québec than in the rest of Canada. Furthermore, Québec students do particularly well at school, especially in mathematics and science.

Substantial additional resources have been allocated to education in recent Budget Speeches

In recent years, a large share of the additional resources allocated by the government to maintain and improve the quality of public services have been earmarked for the education sector.

In the 1999-2000 Budget Speech, \$596 million were allotted particularly to enhance the financial health of the education networks, initiate the education reform and make it possible to purchase dictionaries, grammar and other books.

At the time of the 2000-2001 Budget Speech, the government acted on the commitments made at the Sommet du Québec et de la jeunesse by granting education network institutions an additional \$1 billion over three years. The funds needed to implement the special education policy (*Early Steps Toward Success*) were also allocated.

Additional resources for education

The funds needed to meet the commitments made during the Sommet du Québec et de la jeunesse are being provided in the financial framework of this Budget. The envelope of the ministère de l'Éducation has thus been increased by \$100 million to improve funding for various educational institutions. In addition, the growth in costs relating to wage indexation and in other expenditures has also been included in the department's budget. Lastly, the funds needed to pursue the implementation of the *Early Steps Toward Success* program have been added to the department's envelope.

The government has also decided to improve its student financial assistance program by \$31 million in 2001-2002 and \$38 million annually thereafter. These changes are in response to the requests made during the Sommet du Québec et de la jeunesse and the World March of Women.

All told, the education budget will be raised to \$10 635 million in 2001-2002. Over the past four years, education expenditures have increased cumulatively by over 12%.

TABLE 3.2.1

CHANGE IN EDUCATION EXPENDITURES SINCE 1997-1998

(in millions of dollars)

	1997-1998	1998-1999	1999-2000	2000-2001		2001-2002 ^F	Cumulative growth %

<i>Change</i>		131	245	282	254	528 ¹	

F: Forecast

1 Increase compared with the envelope provided last March for 2000-2001.

Thus, compared with the envelope provided last March for 2000-2001, i.e. \$10 107 million, the budget of the ministère de l'Éducation is increased by \$528 million in 2001-2002.

This amount is supplemented by \$200 million placed in reserve, which will make it possible to fund projects aimed at modernizing the education networks over the coming years.

In all, the government is allocating additional resources of \$728 million to the education sector.

TABLE 3.2.2

Section 3

Appendix 3.3

Additional information on the budgetary revenue forecast for 2001-2002

The Québec government's revenue should total \$51 136 million in 2001-2002. This revenue is derived from two sources: own-source revenue and federal transfer revenue.

Own-source revenue accounts for 81.5% of the government's revenue

In 2001-2002, the Québec government's own-source revenue should reach \$41 652 million, or 81.5% of budgetary revenue. Own-source revenue consists of tax revenue, which essentially includes personal income tax, corporate taxes and consumption taxes. It also consists of non-tax revenue, such as various duties and permits (registration fees, forest royalties, hunting and fishing permits, etc.), miscellaneous revenue (interest, recoveries, sales of goods and services, fines, etc.) and the revenue of consolidated organizations. Lastly, it includes revenue from government enterprises, such as Hydro-Québec, Loto-Québec and the Société des alcools du Québec.

TABLE 3.3.1

BUDGETARY REVENUE IN 2001-2002^F

	In millions of dollars	In %
Own-source revenue	41 652	81.5
Federal transfers	9 484	18.5
Total	51 136	100.0

F: Forecast.

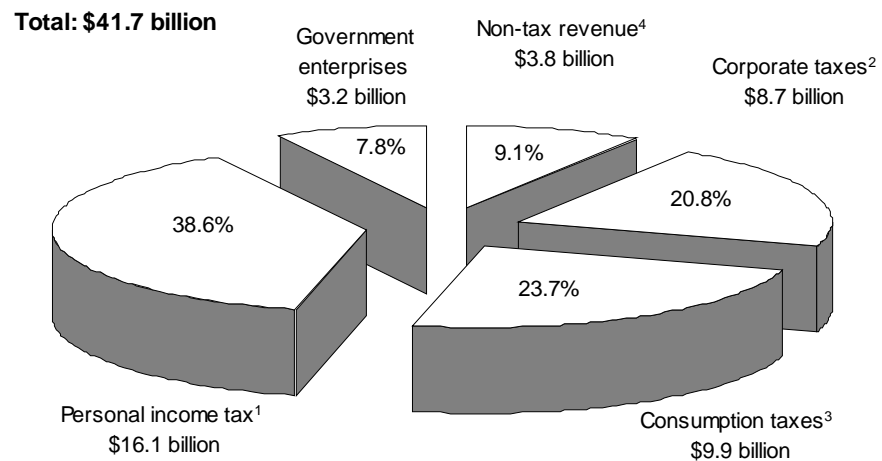

Tax revenue makes up the bulk of own-source revenue

In 2001-2002, personal income tax will be the largest source of own-source revenue (38.6%), followed by consumption taxes (23.7%) and corporate taxes (20.8%). These three sources, which make up tax revenue, account for 83.1% of all own-source revenue.

The balance of own-source revenue consists of revenue from government enterprises (7.8%) and non-tax revenue (9.1%), which includes fees for government services and the revenue of consolidated organizations.

GRAPH 3.3.1

DISTRIBUTION OF OWN-SOURCE REVENUE BY SOURCE IN 2001-2002^F

F: Forecast.

1 Including individuals' contributions to the Health Services Fund.

2 Including corporate contributions to the Health Services Fund.

3 Including duties on alcoholic beverages.

4 Including revenue of consolidated organizations.

Major changes to the structure of revenue

The composition of own-source revenue has changed considerably over the years. Personal income tax as a proportion of overall revenue has declined over the past two decades, while the share of corporate taxes has grown appreciably, doubling since 1970-1971. The share of consumption taxes has fallen sharply, from 37.6 % in 1970-1971 to 23.7% in 2001-2002.

The importance of revenue from government enterprises and non-tax revenue has grown in recent years, in particular because of the improved profitability of government corporations and cost-effective fees for government services. Furthermore, the addition of consolidated organizations to the government's reporting entity since 1997-1998 has helped to significantly increase the share of these revenue sources in total own-source revenue.

GRAPH 3.3.2

CHANGE IN OWN-SOURCE REVENUE BY SOURCE (as a percentage of the total)

F: Forecast.

1 Including individuals' contributions to the Health Services Fund.

2 Including corporate contributions to the Health Services Fund.

3 Including duties on alcoholic beverages.

4 Including revenue of consolidated organizations.

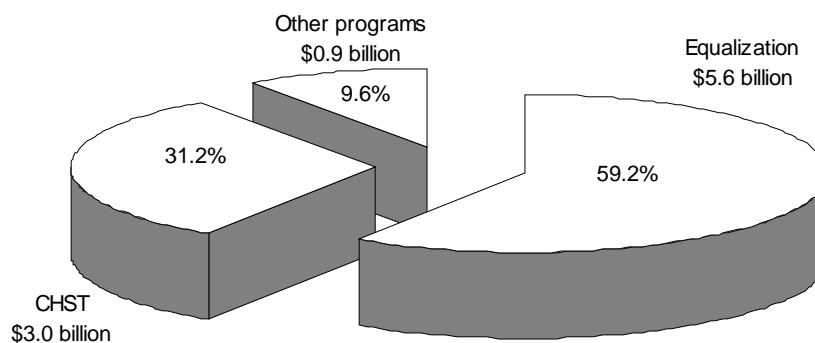

Equalization accounts for almost two-thirds of federal transfers

The Québec government's revenue also includes federal transfers. In 2001-2002, these transfers will reach \$9 484 million, or 18.5% of budgetary revenue. Federal transfers include equalization, the Canada Health and Social Transfer (CHST) and revenue from a number of cost-sharing agreements between Québec and the federal government.

GRAPH 3.3.3

DISTRIBUTION OF FEDERAL TRANSFERS BY SOURCE IN 2001-2002^F

Total: \$9.5 billion

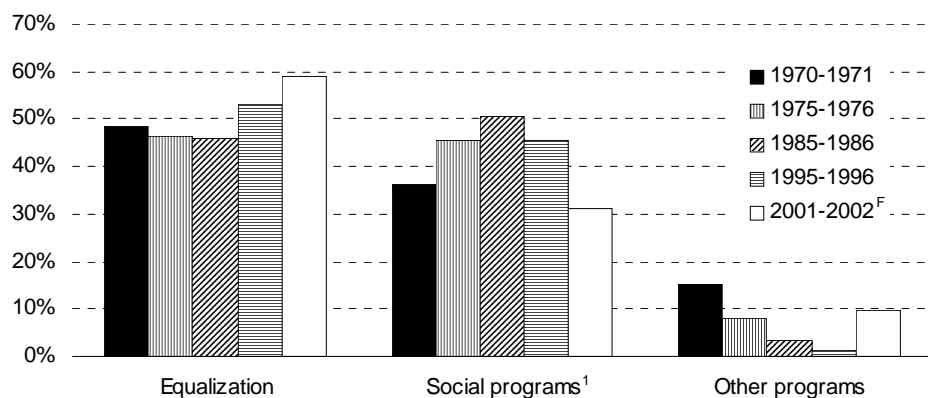

F: Forecast.

Share of federal transfers for health, education and income security down sharply

As the following graph shows, the share of federal cash transfers for health, education and income security services has fallen sharply since the early 1980s. This decline has accelerated recently with the implementation of the CHST in 1996-1997, which was accompanied by a substantial drop in the federal contribution to social programs funding.

GRAPH 3.3.4

CHANGE IN FEDERAL TRANSFERS BY SOURCE (as a percentage of the total)

F: Forecast.

1 Cash transfers only (excluding the special Québec abatement).

Owing to income tax reductions, the budgetary revenue/GDP ratio will decrease

Since the early 1980s, budgetary revenue has accounted for a relatively steady proportion of GDP, although this ratio has risen since 1997-1998 with the inclusion of certain organizations within the government's reporting entity.

However, on account of the income tax reductions announced in this Budget and in those of previous years, this ratio should fall from 24.1% in 1998-1999 to 22.2% in 2002-2003.

GRAPH 3.3.5

CHANGE IN BUDGETARY REVENUE (as a percentage of GDP)

Section 4

Reserve for health and social services,
education, social solidarity and research

Introduction..... 3

Creation of a reserve comprising four components..... 3

Maintaining government control and full transparency regarding
the use of funds placed in reserve 4

Introduction

In recent years, Québec has devoted considerable effort to eliminating the deficit. This objective was enshrined in *the Act respecting the elimination of the deficit and a balanced budget* unanimously adopted by the National Assembly in December 1996.

Over the past three years, not only has a balanced budget been achieved, but very substantial excess amounts have even been posted at the end of each fiscal year.

However, when an excess amount is posted at the end of a fiscal year, it is often too late for the government to allocate, according to its priorities, all or part of this excess amount to financing initiatives for meeting the population's needs more effectively. In the current context, any surplus achieved at the end of the fiscal year must be used to reduce the debt, unless the management of this surplus is entrusted to third parties and an expenditure is recorded in this regard.

Therefore, the government is announcing today the creation of a reserve which, in the coming years, will allow it to provide for the funding of new initiatives out of the excess amounts posted at the end of the fiscal year. Draft legislation will be tabled shortly in this regard.

Rigorous and more effective management of surpluses

Creation of a reserve comprising four components

The reserve will be used notably for modernizing the health and social services and education networks and for implementing new social solidarity and research initiatives.

This year \$950 million, taken from the excess amounts posted, will be placed in reserve: \$600 million for the health and social services sector, \$200 million for the education sector, \$100 million for social solidarity and \$50 million for research.

TABLE 4.1

ALLOCATION OF EXCESS AMOUNTS FOR 2000-2001 TO THE RESERVE FOR HEALTH AND SOCIAL SERVICES, EDUCATION, SOCIAL SOLIDARITY AND RESEARCH
(in millions of dollars)

Component	
Health and social services	600
Education	200
Social solidarity	100
Research	50
Total	950

Given that the reserve is permanent, the government will henceforth be able to decide, in preparing the Budget Speech, to allocate additional amounts to it. It will then specify the purposes for which these funds will be earmarked.

Maintaining government control and full transparency regarding the use of funds placed in reserve

The amounts paid into the reserve will remain under full government control.

Transparency with regard to the allocation and use of surpluses placed in reserve

Projects funded from the reserve will be selected jointly by the Minister of Finance, the Chairman of the Conseil du trésor and the ministers responsible for the sectors concerned by each of the four components. Projects chosen by the selection committees will have to obtain the authorizations generally required from the Conseil du trésor and, where applicable, from Cabinet.

Eligible projects will be non-recurring and will complement existing government programs.

Each year, the government will account for the use of funds taken from the reserve.

The funds allocated to the reserve will be deposited with the Caisse de dépôt et placement du Québec. The draft legislation respecting the reserve will include a provision allowing the Caisse de dépôt et placement du Québec to receive from the government amounts placed in reserve. The funds thus deposited will be managed according to the investment policies determined by the Minister of Finance. The revenue generated by these investments will be allocated to the reserve and will thus increase the resources that may be allotted to finance selected projects.

Concordance adjustments to the *Act respecting the elimination of the deficit and a balanced budget* will be introduced so that the concept of balanced budget used for the purposes of the Act takes into account the funds allocated to the reserve and the amounts that may be taken from it.
