Corvair's rear engine is way out front!

There's nothing like a new car and... 

- no new compact car like the Corvair.
- This is the standard model.

If it weren't for that compact rear engine you pictured below, there would be no such thing as a Corvair. 

Chevrolet, of course, could have scaled a conventional model down to compact-size. But it wouldn't have been anything like the Corvair. It would have been a Corvair's outstanding stability and traction and smooth handling. A Corvair is different from other compact cars... and it takes a radically different power plant to make it that way.

Look at the engine again. You'll notice that the six cylinders lie horizontally, three opposed to three. That's called a "pancake" design. It takes up less space, it leaves more room for passenger comfort.

It's an unusually light engine, made almost entirely of aluminum. As a result, Corvair weight distribution is excellent; just look at the engine again. You'll notice that the six cylinders lie horizontally, three opposed to three. That's called a "pancake" design. It takes up less space, it leaves more room for passenger comfort.
