R E M A R K S .

AS every department of the establishment is under the personal attention of the proprietors, they feel that they may confidently guarantee the identity and correctness of all the Trees and Plants sent from their establishment, as every tree that is expedited is selected and packed under their own eyes, and they have further to say, that should any error arise, it will be rectified with the greatest pleasure, and full amends made for any inconvenience or delay.

In the introduction of the products of foreign countries, the proprietors do not intend to confine themselves, to those alone which may yield pecuniary profit to themselves, but to obtain from the various parts of the world every tree or plant which may promise to yield any benefit; it being their object to make their establishment a national repository of every thing useful or interesting in Botany, both as regards Manufactories or Horticultural and Scientific Experiments.

Visitors are allowed free access to the establishment on all days, persons conversant with Horticulture are invited to visit their establishment for their amusement, as well as in order that they may form a proper estimate of the extent and value of their collection.

It will be perceived that numerous and splendid acquisitions have been made and great attention have been exercised in selecting the most interesting and beautiful, many of which have been purchased at a great expence, the prices have been greatly reduced, and are lower than the same articles of equal quality, can be obtained for elsewhere.

The proprietors will import any plants they have not got yet, either from Europe or the United-States, at a very reasonable advance, the prices of which can be ascertained by applying to

S. Guilbault & Co.

OBSERVATIONS.

COMME les propriétaires surveillent eux-mêmes en entier leur établissement, ils peuvent en toute sûreté garantir l'identité de tous les Arbres et Plantes qui en sortiront, vu qu'ils sont choisis, emballés et expédiés sous leurs yeux ; s'il arrivait quelque erreur, elle sera rectifiée avec le plus grand plaisir, et ils répareront le tort qu'aura pu occasionner ce délai.

En introduisant dans ce pays les productions des pays étrangers, ils ne se borneront point à celles qui peuvent leur rapporter des avantages pécuniaires ; ils se proposent de faire venir des différentes parties du monde les arbres ou plantes qui promettent d'être utiles, leur but étant de faire de leur établissement un dépôt national de tout ce qui peut servir ou intéresser en Botanique en fait de Manufactures ou d'expériences d'Horticulture ou Scientifiques.

Les personnes qui voudront visiter l'établissement y auront un libre accès tous les jours ; ils invitent ceux qui s'entendent en Horticulture à le venir voir pour leur propre amusement et pour juger de l'étendue et de la valeur de leur collection.

On verra qu'ils ont fait de nombreuses et précieuses acquisitions en choisissant les plantes les plus intéressantes et les plus belles, un grand nombre desquelles leur ont coûté très-cher ; ils en ont considérablement réduit les prix qui sont plus bas que ceux qu'on demande partout ailleurs pour les articles de la même qualité.

Les propriétaires importeront aucunes plantes qu'ils n'ont pas encore, soit d'Europe, soit des Etats-Unis, moyennant des avances raisonnables ; il faut à cet effet s'adresser à

S. Guilbault & Cie.

GREEN-HOUSE PLANTS.

*All of which will thrive in a comfortable
Sitting Room during Winter, they are
either in Pots or Boxes,*

PLANTES DE SERRE.

*Elles pousseront toutes dans un apparte-
ment tempéré pendant l'Hiver ; elles
sont en Pots ou Boîtes.*

	Rosa Indica,	China rose,	Rosier des Indes.	

Most of which are monthly or everblooming.

The monthly varieties when planted in the open ground are particularly interesting, on account of their expanding their flowers in May, when those of other kinds have not yet made their appearance; they continue to bloom throughout the summer, but in the autumnal months their numerous flowers also afford particular gratification, as nature then seems most to need their cheering influence.

Ces plantes donnent pour la plupart des fleurs chaque mois.

Les variétés mensuelles, quand elles sont plantées en plein air, sont singulièrement intéressantes, vu que leurs fleurs se déploient en Mai, tandis que celles des autres sortes n'ont pas encore paru. Elles continuent à être en fleur pendant tout l'été, mais les mois d'automne leurs fleurs nombreuses sont très agréables, surtout dans le tems où la nature semble avoir le plus grand besoin de leur douce influence.
