Santé et Services sociaux Québec

PRÉSENTATION

INFORMATION DOCUMENTAIRE est un bulletin que le Service de l'accès à l'information et de la propriété intellectuelle met à votre disposition afin de souligner la documentation récente susceptible de vous intéresser dans les domaines sociosanitaires et d'en favoriser ainsi l'exploitation optimale.

La première partie vous présente les nouvelles acquisitions du Service de l'accès à l'information et de la propriété intellectuelle. Une courte notice bibliographique vous décrit les documents choisis. Vous retrouvez dans la deuxième partie les tables des matières des périodiques nouvellement reçus.

Si vous êtes un employé d'un milieu documentaire ou un membre du personnel du ministère de la Santé et des Services sociaux, de la Régie de l'assurance maladie du Québec, du Commissaire à la santé et au bien-être ou du Bureau du coroner, vous pouvez effectuer une demande de prêt de documents ou d'articles de périodiques par le biais de la Bibliothèque virtuelle, par courriel ou par téléphone au 418-266-7007.

Toute reproduction des documents signalés dans le présent bulletin doit être conforme aux dispositions prévues à la *Loi sur le droit d'auteur*.

Pour être assuré de recevoir régulièrement **INFORMATION DOCUMENTAIRE**, il est très important de nous informer de tout changement d'adresse ou annulation d'abonnement.

Le médecin face à sa responsabilité sociale

« Les hausses importantes de rémunération nous ont enfermés dans une cage dorée. Elles nous ont enlevé une certaine motivation et éloignés de la médecine en consacrant la primauté d'une logique d'entrepreneur. C'est l'avénement du chacun-pour-soi. »

Kendler and Gardner report (p. 426) a study of over 1000 brother and sister twins to examine differences in predisposing factors for depression in men, such as their failure to achieve goals, and in women, such as their lost caring relationships. Weissman in an Editorial (p. 384) points out that these differences need to be incorporated into the search for better treatments for both genders.

APHA
AMERICAN PUBLIC HEALTH ASSOCIATION
For science. For action. For health.

Promoting public health research, policy, practice, and education is the mission of the American Journal of Public Health. As we widen our scope to embrace global issues, we also sharpen our focus to support the needs of public health practitioners. We invite contributions of original unpublished research, opinion and commentary, departments, and letters to the editor.

The Journal is printed on acid-free recycled paper.

Cover. The US map on the cover displays visually the number of persons diagnosed with an HIV infection over the time period 2008-2011. In their insightful Commentary in this issue titled, Geography Should Not Be Destiny: Focusing HIV/AIDS Implementation Research and Programs on Microepidemics in American Neighborhoods, Amy Nunn and colleagues argue that: "Since HIV infection often clusters in neighborhoods that already experience significant social and economic burden, for the [National HIV/AIDS Strategy] to be maximally effective, public health officials will need to address these microepidemics by concentrating resources, program evaluation, and implementation research in the most heavily impacted communities." (see p. 775)

Cover concept and selection by Aleisha Kropf. The cover map is printed with permission of AIDSVu.com (available at http://aidsvu.org/resources/downloadable-maps-and-resources).

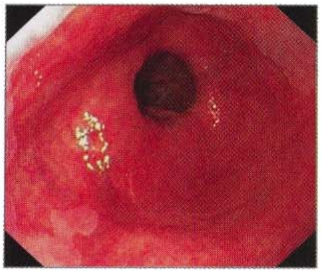
Ablation vs Surveillance of Barrett Esophagus 1209



Esophageal adenocarcinoma originates from Barrett esophagus, a metaplastic change in the esophageal epithelium that likely progresses in a step-wise fashion from nondysplastic to low- and high-grade dysplasia before eventually becoming adenocarcinoma. In a multicenter randomized trial involving 136 patients with Barrett esophagus containing low-grade dysplasia, Phoa and colleagues found that compared with endoscopic surveillance, endoscopic radiofrequency ablation reduced the risk of progression to high-grade dysplasia and adenocarcinoma. In an Editorial, Mönkemüller discusses the treatment of Barrett esophagus with low-grade dysplasia.

Web-Based Alcohol Screening and Intervention 1218

To assess the effect of web-based alcohol screening and brief intervention on unhealthful alcohol use, Kypri and colleagues invited 14 991 New Zealand university students to complete web-based screening. Among 5620 students who completed screening, 3422 screened positive for problem alcohol use and were randomly assigned to additional self-assessment and feedback (intervention) or screening alone (controls). The authors report the intervention produced no significant reductions in the frequency or in the overall volume of drinking, or in academic problems. A small effect on the amount of alcohol consumed per drinking session was possible. In an Editorial, Naimi and Cole discuss web-based alcohol screening intervention programs to reduce excessive alcohol use among college students.

HbA_{1c} Measurement and Cardiovascular Disease Prediction 1225

Elevated glycated hemoglobin (HbA_{1c}) levels have been associated with higher cardiovascular disease (CVD) incidence, and some guidelines recommend inclusion of glycemia measures in algorithms used to predict the risk of CVD. In an analysis of individual-level data from 73 prospective cohort studies involving 294 998 participants without a known history of diabetes or CVD at baseline, the Emerging Risk Factors Collaboration found that assessment of HbA_{1c} in the context of CVD risk assessment provided little incremental benefit in predicting incident CVD.

Distance From Transplant Center and Liver Transplantation 1234
Centralization of specialized health care services such as organ transplantation has been advocated to improve quality and efficiency; however, whether increased travel compromises access to care or patient outcomes is not clear. In a retrospective study of 50 637 veterans classified as potentially eligible for a liver transplant, Goldberg and colleagues found that 2895 (6%) were placed on a transplant list. In analyses that considered the distance a patient lived from a transplant center, the authors found that greater distance was associated with a lower likelihood of being waitlisted or transplantation and a greater likelihood of death.

Carotid Endarterectomy and Stenting in Elderly Patients 1244
An article in *JAMA Surgery* reported results of a meta-analysis of data from 44 observational studies that examined outcomes of carotid endarterectomy and carotid artery stenting procedures in young and elderly patients. In this From The JAMA Network article, Perler discusses the efficacy and safety of the 2 procedures among patients 65 years or older. He finds that carotid stenting is an evolving technology that may be appropriate for selected patients; however, the available evidence favors carotid endarterectomy for most elderly patients with significant carotid artery disease who are at risk of stroke.

Tadalafil to Prevent ED After Prostate Cancer Radiotherapy 1300

Erectile dysfunction (ED) is common after radiotherapy for prostate cancer. In a randomized trial that enrolled 242 men with intact erectile function who were to receive radiotherapy for prostate cancer, Pisansky and colleagues assessed whether daily treatment with the phosphodiesterase-5 inhibitor tadalafil—initiated at the onset of radiotherapy and continued for 24 weeks—could preserve erectile function. The authors report that compared with placebo, daily use of tadalafil did not result in improved off-drug, spontaneous erectile function assessed 28 to 30 weeks after starting radiotherapy.

Rohde and colleagues assessed whether red blood cell (RBC) transfusion was associated with health care-associated infection risk in a systematic review and meta-analysis of data from 18 randomized trials (7593 patients) that compared restrictive vs liberal hemoglobin thresholds for transfusion. The authors found that a restrictive RBC transfusion strategy was associated with a reduced risk of health care-associated infection. Leukoreduction of RBC units did not alter the association. In an Editorial, Carson discusses RBC transfusion thresholds and transition-associated infection risk.

Breast Cancer Screening: Benefits and Risks 1327

Pace and Keating report results of a systematic review of the evidence (1960-2014) addressing several important issues related to screening mammography: the mortality benefit; harms associated with screening, including false-positive results, unnecessary biopsies, and overdiagnosis; and the clinical challenges of incorporating individual patient characteristics in screening recommendations and communicating risks and benefits to patients. Among the authors' findings was a modest 19% overall reduction in breast cancer mortality and an approximate 50% cumulative risk of a false-positive result during 10 years of annual mammograms. In an Editorial, Elmore and Kramer discuss how to ensure informed and individualized decision making about breast cancer screening.

Validation of the ASCVD Pooled Cohort Risk Equations 1406

The 2013 American College of Cardiology/American Heart Association cholesterol treatment guideline recommends new equations (the Pooled Cohort risk equations) to estimate patients' atherosclerotic cardiovascular disease (ASCVD) risk and to guide initiation of statin therapy. To provide external validation of the prediction models, Muntner and colleagues assessed the calibration and discrimination of the equations in a contemporary, population-based cohort (n = 18 498). The authors report the Pooled Cohort risk equations were well calibrated and demonstrated moderate to good discrimination in the population of individuals for which they were designed to be used. In an Editorial, Krumholz discusses implications of recently updated cholesterol and blood pressure treatment guidelines for patients and physicians.

Among the authors' findings was that the proportion of individuals eligible for statin therapy differed substantially among the guidelines and that all 3 guideline-specific risk prediction models overestimated 10-year CVD risk.

In an analysis of data from the 2005-2010 National Health and Nutrition Examination Surveys (n = 16 372 individuals), Navar-Boggan and colleagues estimated the proportion of adults potentially affected by recommended changes in high blood pressure management specified in the 2014 guideline from the panel appointed to the Eighth Joint National Committee on Prevention, Detection, Evaluation, and Treatment of High Blood Pressure (JNC 8). The authors estimate that compared with the JNC 7 guideline, the JNC 8 guideline would result in fewer US adults recommended for hypertension treatment and an increased proportion of adults considered to have achieved blood pressure goals.

Among the review findings was that when initiated within 24 hours of symptom onset, oral zinc was associated with a shorter duration of cold symptoms but did not differ from placebo in reducing symptom severity. Used prophylactically (mean duration, 6 months), oral zinc reduced cold incidence among children.

Device Success in Transcatheter Aortic Valve Replacement 1503

Deployment of valves in transcatheter aortic valve replacement (TAVR) requires a balloon-expandable or self-expandable system. Abdel-Wahab and colleagues assessed the comparative performance of these 2 systems in a randomized trial that enrolled 241 patients scheduled to undergo TAVR. The authors report that the balloon-expandable prosthesis resulted in a greater rate of device success—a composite of successful vascular access, device deployment, and retrieval of the delivery system; correct device positioning; performance without moderate or severe regurgitation; and only 1 valve implanted. In an Editorial, Tuzcu and Kapadia discuss factors to consider when choosing a valve for TAVR.

Ambulance-Based Thrombolysis in Acute Ischemic Stroke 1622

Early thrombolysis with intravenous tissue plasminogen activator is associated with better outcomes in acute ischemic stroke. In a study randomized by week from May 1, 2011, to January 31, 2013, that involved 6182 German adults with suspected stroke, Ebinger and colleagues found that compared with conventional ambulance care, use of an ambulance equipped with a computed tomography scanner, laboratory capability, telemedicine connection, and trained stroke team resulted in decreased time to treatment without an increase in adverse events. ▶MJA Podcast

The second podcast in our Centenary Year series features Professor David Cooper, director of the Kirby Institute for infection and immunity in society at the University of New South Wales. Professor Cooper was there when Harvard Medical School researchers discovered the cell surface markers of T cells in 1983. He established the HIV/AIDS ward at St Vincent's Hospital in Sydney and has been at the forefront of HIV research ever since. He talks about the future, including the possibility of an HIV vaccine and global health concerns.
