WEATHER TABLE.

The following Table (ascribed to Dr. Herschell, and revised by Dr. Adam Clarke,) constructed upon philosophical considerations of the attraction of the Sun and Moon, in their several positions respecting the Earth, and confirmed by experience of many years actual observation, furnishes the observer, without farther trouble, with the knowledge of what kind of weather there is the greatest probability of succeeding, and that so near the truth, that in very few instances will it be found to fail.

New and Full Moon.	Summer.	Winter.
If it be New or Full Moon, or the Moon entering into the first or last quarter at 12 noon or between 12 and 2	Very rainy	Snow and rain
2 and 4 afternoon	Changeable	Fair and mild
4 and 6 evening	Fair	Fair
6 and 8 do.	Fair, if wind at N. W. Rain, if wind at S. or S. W.	Fair and frosty, if wind at N. or N. E. Rain or snow, if wind South or S. West.
8 and 10 do.	Do. do.	Do. do. do. do.
10 and 12 night	Fair	Fair and frosty
12 and 2 morning	Fair	Hard frost, unless wind S. or S. W.
2 and 4 do.	Cold, with frequent showers	Snow and stormy
4 and 6 do.	Rain	Do. do.
6 and 8 do.	Wind and rain	Stormy weather
8 and 10 do.	Changeable	Cold rain, if wind be West; snow, if East
10 and 12 noon	Frequent showers	Cold with high wind

EXPLANATION.—It will be seen from the above, 1st. That the nearer the time of the Moon's change, First Quarter, Full, and Last Quarter, is to *Midnight*, the fairer will the weather be during the seven days following; the space for this calculation occupies from ten at night till two next morning.

2.—That the nearer to *Mid-day*, or *Noon*, these phases of the moon happen, the more foul or wet the weather may be expected during the next seven days; the space for this calculation occupies from ten in the forenoon to two in the afternoon. These observations refer principally to summer, though they affect spring and autumn to a considerable extent.

3.—That the Moon's Change, First Quarter, Full, and Last Quarter, happening during six of the afternoon hours, *i. e.* from four to ten, may be followed by fair weather: but this is mostly dependent on the *wind*, as it is noted in the table.

Though the weather is more uncertain in the latter part of autumn, the whole of winter, and the beginning of spring; yet, in the main, the above observations will apply to those periods also.
