CHICKEN SUPPER—The annual chicken supper of Austin United Church, will be held on Wednesday evening, Nov. 23rd. Supper will be served in the hall from 5.30 to 8.00 o'clock to be followed by a program in the Church. Admission—35 and 20 cents.

Why not a photograph for Christmas? The one gift that can't be duplicated. Your friends can buy anything you can give them except your photograph. Our Christmas Special, until the New Year, two extra photos given with each dozen. Make an appointment to-day. H. IRISOX, Photo Artist.

The Ladies' Guild of Holy Trinity Church, Radford, held their annual chicken supper at the home of Mr. and Mrs. Jack Horner on Friday evening, Nov. 18. The event marked the closing of the Sunday School for the Winter months, and a welcome to Rev. T. E. R. and Mrs. Nurse. Fish ponds for the children and adults proved a source of much amusement for the gathering which numbered about sixty.

Citizens of town and district numbering about forty, took advantage of the reduced fare to Ottawa and Montreal, for the week-end. Many from other towns along the Pontiac line also entrained and the excursion, which was instituted by Canadian Pacific officials, proved quite successful. The return fare from Shawville to Ottawa, was only \$1.00; to Montreal, \$3.00.

Two heavy snow falls on Tuesday and Saturday, accompanied by zero temperature, has cast this section of Old Mother Earth into what seems to be a real old-time winter, and as we go to press there is little indication of the snow disappearing. Most all the farmers have brought out their sleighs, and motorists have had difficulties getting through on Main Highways. Many of the branch roads are impassable for motors.

"What Happened to Jones"—a three-act comedy, presented by the Dramatic Club, of Beachburg, at Shawville Theatre on Friday night, attracted only a fair sized audience. The play was presented under the auspices of the local Women's Institute and was very well received. The skit was truly a comedy and the various parts were taken with apparent ease. The leading role, taken by the director, Mr. R. S. Graham, was exceptionally well carried. The cast of twelve were accompanied here by a number of friends and a three-piece orchestra who furnished music preceding the performance and at the intermissions. At the conclusion of the program refreshments were served to the visitors and a dance followed.

Pontiac County Young People's Fellowship Rally

The Young People of the United Churches of South Pontiac rallied to the number of over 300 in the Bristol St. Andrew's United Church, on Monday evening. Carloads came in from Fort Coulonge, Campbell's Bay, Zion, Yarm, St. Andrew's, Austin, Wyman and Quyon. The opening worship service was conducted by Shawville society, led by Miss Margaret Chisnell, after which the Pastor of St. Andrew's Church introduced the speakers. Wm. Scrivens, of Ottawa, President of the Ottawa Presbytery, gave some outlines for work during the year, and Geo. Jackson, Secretary of the same organization dealt with the matter of Soft Ball and amateur dramatics. Then the speaker of the evening, Rev. D. T. I. Forsythe, of Montreal, leader in Young People's work spoke on the theme "The Vision from the Heights", giving a strong challenge to the Young People to strive towards the highest things in life because of the broadened vision it will give. The Young People then retired to the Sunday School Room of the Church, where an evening of stunts, games and music was enjoyed. A clever stunt entitled, "The Fatal Quest", was given by Misses Siona Brandt, Audrey McPherson, Eleda Tucker, Lottie Wright, and Messrs Harold Fokes and Max Carson, of Shawville. Messrs Jackson and Forsythe, mystified the audience with their mind-reading tricks. After an enthusiastic sing song, refreshments were served by the Young People of St. Andrew's and the gathering closed with the singing of "Tap".

MARRIED

At Shawville, Que., on Nov. 12, 1932, by the Rev. E. C. Reed, of the Standard Church, Marino, third daughter of Mr. and Mrs. Alphonse Lepine, Bryson, Que., to Seymour Austin, eldest son of Mr. and Mrs. H. A. Harris, of Charteris, Que.

PERSONAL MENTION

Mrs. Andrew Hodgins is visiting her relatives in Ottawa this week.

Mrs. Geo. Hodgins is spending this week in Ottawa with relatives.

Mrs. W. E. Shaw is visiting her sister, Mrs. Walter Derrick, in Montreal, last week-end.

Miss Marjorie Millar, of Ottawa, was a week-end guest of her sister, Miss Ivy Millar, in town.

Mrs. C. H. MacLean and daughter, Miss Helen, spent the week-end in Montreal.

Mrs. T. W. Sillick and little daughter, Joan, returned to their home in Toronto on Monday, after a week's visit with their relatives in town.

Mrs. Goldwin McDowell and daughter, Patricia, were guests of their relatives at St. John, Que., over the week end.

Miss Marjorie Clarke, Reg. N., of Campbell's Bay, is a guest of her cousin, Miss Iva Cowan, this week.

Mr. and Mrs. Martin Black and family, of Almonte, Ont., are visiting their relatives in town this week.

Mr. Dean Howard, eldest son of Mr. and Mrs. G. A. Howard, left last week for Regina, Sask., where he will enter training for the Royal Canadian Mounted Police.

Mr. Rennie of the Shawville High School, was in Montreal on Friday evening and Saturday, attending a special session of the Executive of the Provincial Association of Protestant Teachers.

Miss Pearl Baker returned last week from a month's visit with relatives and friends at South Porcupine, Ont. She was accompanied home by her little cousins, the Misses Florence and Mary Connolly.

Miss M. K. Barnett, R. N., of the Medical Centre, New York, and Mr. and Mrs. Geo. Maher, of Southampton, Long Island, have returned to their homes after spending the last ten days, the guests of Mr. and Mrs. H. S. Barnett.

Mr. Trueman A. Draper Passes After Lengthy Illness

After an illness of many months, accompanied by intense suffering, Mr. Trueman A. Draper died at his late residence, Main Street, early Monday evening, Nov. 21st. The funeral, which will be under the direction of the Masonic Order, takes place this Wednesday afternoon to Shawville United Church and Maple Grove Cemetery. An extended reference to life and death of Mr. Draper will appear in our next issue.

Former Shawvilleite in Charge of Canadian Nurses' Association

The Montreal Gazette of Nov. 14th, states that the Headquarters of the Canadian Nurses' Association has been moved from Winnipeg to Montreal, with Miss Jean S. Wilson, executive secretary in charge. Miss Wilson is a daughter of Mr. T. W. Wilson and the late Mrs. Wilson, who were residents of Shawville for many years, and received her early education in Shawville Academy. She took her nurse's training at the Lady Stansbury Institute, Ottawa, and later took a post-graduate at the McGill School, for Graduate Nurses. Miss Wilson has been the executive secretary of the Association since the office was established in February, 1932.

The office of the Canadian Nurses' Association supplies information on nursing and allied subjects to its membership and to the public on request, or indicates where it may be obtained. It also links the Canadian nurses with those of other countries through its affiliation with the International Council of Nurses.

It serves, in general, to co-ordinate the interests of the profession and to advance educational matters. At present, the chief work of the national body is to promote the application of the findings and recommendations of the survey of nursing conditions in Canada carried out by Dr. G. M. Weir, professor of education at the University of British Columbia, and published last year.

Wild Geese Numerous

The Pembroke Standard Ob-

server says: Wild geese are very

numerous in this section this year,

thousands having been seen along

the Ottawa river between this

town and Roche Fendu. They are

very wild and hunters have found

it almost impossible to get close

enough for a shot. A small flock

of geese were seen one morning

recently at the mouth of the Mus-

krat river, and it is reported that

a flock of about 2,000 birds was

seen feeding on the links of the

Pembroke Golf Club. J. Sutherland,

Micksburg, shot a laughing

goose or snow goose which hit

among a flock of turkeys on his

farm. This species is very rare in

this section.

Twenty-five Wapiti Elk arrived at

Pembroke last week. They were

shipped from the National Park, Wain-

wright, Alberta, and released at the

Pembroke Crown Game Reserve, 10

miles from Petawawa. They were

transferred from the railway car to the

preserve by motor trucks.

ASK NO QUESTIONS!

By BELDON DUFF

SYNOPSIS.

Annassa West, young and impetuous, leases Bride's House, a deserted farmhouse in a remote district in Connecticut. She moves in and installs her string of polo ponies. While inspecting the private grave-yard she discovers one of the graves newly opened with the warning "Ask No Questions." Otto, her stable boy, gives notice that he is leaving, declaring someone has been riding Dracula, a savage stallion, at night. Annassa finds Otto murdered. John Diamond renews his efforts to get Annassa to leave.

CHAPTER V.—(Cont'd.)

So frank an effort to make amends could only have one effect on a person of Miss West's temperament. She thawed on the instant.

"That's more than generous of you, Mr. Diamond; and I appreciate it. But—I can't leave my job unfinished. It, the memory of having been scared away, would haunt me all the rest of my life." With a rueful smile, "Whether I go or whether I stay, it's all one now. A ghost has camped on my trail."

Had she been looking at John Diamond then instead of at the leafy branches overhead she would have seen as black a scowl of fury cross the mobile countenance as ever Dore portrayed on the face of his fallen Lucifers. But by the time she had lowered her eyes the expression had been subtly transformed into one of fatherly concern. He said, "I am sorry, my child, that my arguments have failed to move you. Still, since they have brought about a better state of understanding between us, the trip has not been fruitless. In future you will look upon me as a friend, will you not?" And without waiting for an answer, "Suppose you dine with me some night this week. My chef is a Swiss. His cooking is not to be despised."

Miss West tried to be as enthusiastic as the invitation seemed to demand. She would love to come, she said. Her Abby was a good cook, too, but inclined to think over much about what was good for one's digestion.

On this light note they parted. The red-headed girl waved her hand in farewell. The millionaire bowed with Od World courtliness.

It took some time for the chauffeur to turn in the narrow road, but Miss West waited until the sleek black car was well out of sight before attempting to continue her interrupted journey toward Bride's House.

The errand which had taken her to town had been accomplished—the sending of a telegram to a New York employment agency. Since she had made up her mind to stay, she would need help, two men. Two were less liable to share Otto's fate than one. She as anxious now to get home to Abby.

Her heels had scarcely dug into the roan's sides, however, when a man emerged from a thicket of white birch close at hand, so close it looked as though he must have been hiding there during her interview with the master of Berkshire Towers, and scrambled down the steep bank, calling out that he had something of importance he wished to say to her.

In a position where it would be easy enough to get away should the necessity arise, it seemed there could be no great danger in stopping long enough to hear what this important something might be. Tightening her hold on the bridle rein to keep the dancing roan in check, the girl drew well over to the other side of the road and waited until the newcomer had made the descent.

He was old and quite harmless looking, more a caricature than a man, withered and plucked beyond description, yet dressed after the manner of gentry in a swallow-tailed coat and a high silk hat. The hat was battered, the coat green and shiny as the skin of an avocado pear. Annassa motioned him to draw closer, and saw that he barely reached to the pommel of Blue Bullet's saddle.

"With the pure thou shalt show thyself pure," was the poor creature's extraordinary greeting. "And with the wicked thou shalt show thyself forward."

There was no mistaking what was meant by this sly allusion.

Miss West said, with an assumption of severity, "So you were listening."

The faded eyes blinked up at her, blandly unabashed. "By listening one learns; and by learning one acts. I am a man of action."

The girl restrained a desire to smile. "What plan of action, other than spying upon me and my guests, brings you here?"

Still the stranger did not take offense. "I am the veterinary, Dr. Derick Cranston," he announced with simple dignity. "You sent for me."

"Oh, of course!" Miss West wondered how she could have forgotten. "I've a number of horses here with me on the Runnels farm. And my stable boy—" hesitating—"you may have heard?"

The little man nodded. "Yes, the light of the wicked shafts was put out; and the spark of his fire shall not shine."

"C'to was not wicked!"—stung to indignation by the unexpectedness of this attack. "He was a good, honest man, and the person who murdered him is going to escape."

She might have spared herself the added pang which any mention of Otto's name brought. The queer, vibrant voice took up the thread of its unpleasant discourse at the point where it had left off: "For he is cast into a net by his own feet; and he walketh upon a snare."

Annassa West saw that it was foolish to argue the point. The veterinary was apparently unbalanced on the subject of religion, but in Hales Crossing they had told her he knew his business, and that was all that mattered. "I own a string of horses," she explained patiently—"thoroughbreds. One of the mares is in foal. I'd like to have you show me how to take care of her until I can find another boy."

"That's why I'm here. That's why I'm here. Dr. Cranston buttoned his coat with business-like briskness. He seemed anxious to create the impression that it was Miss West and not he who delayed the game. "Shall we proceed?"

Together they went down the shaded road, Annassa alertly erect on the roan's back, the veterinary ambling along at her stirrup with all the agility of a moth-eaten black spider.

CHAPTER VI.

"That's a fine animal you're riding," said Cranston. An appreciative hand stroked the silky flank. "Must come of right good stock."

A word of praise for one of her horses always touched the right chord in Miss West's heart. "Blue Bullet is three times a ribbon winner. He's one of the best polo ponies that ever went a full chukker."

"Blood will tell," observed the veterinary. "It tells in a horse and it tells in a human." His glance slid upward to the figure of the straight young rider, and once more the fanatic gleam returned to his eyes. "I will surely go with thee; notwithstanding thy journey that thou takest shall not be for thine honour; for the Lord shall sell Sisera into the hand of a woman."

"You're quite a student of the Bible, aren't you, Dr. Cranston?" Thanks to Abby's early training, Miss West was not unfamiliar with the Book herself.

"Yes, yes," came the mumbled reply. "I diligently keep the commandments of the Lord, my God; and his testimonies and his statutes which he has commanded."

The girl said his zeal did him credit. She was not quite sure that she spoke the truth.

"And thou shalt do that which is right and good in the sight of the Lord," he told her, and there was a curious intensity in the look which accompanied the words. "To cast out thine enemies before thee—'Ah,' with a wave of the hand and a ludicrous change of tone, "here we are."

So absorbed as Miss West in her strange companion that, until he called her attention to the fact, she had not realized they stood before the gate of Bride's House.

With a start that had in it both surprise and a vague uneasiness, she stared up at the primly curtained windows, the mellowed roofs, the staggering red-brick chimneys. "I hope," was her observation as she slid from the saddle and hooked her arm through Blue Bullet's saddle. "I hope you are not one of those foolish people who are afraid to come here."

The veterinary laid his hand on the white picket fence. "Why should I be?" His voice sounded as reverent as though he were speaking before a church altar. "Time was when this place held for me all that was most sweet and beautiful." After a pause, "In the morning, it flourisheth and groweth up; in the evening, it is cut down and withereth. Teach us, O Lord, the number of days, that we may apply our hearts to wisdom." Allow me." He had opened the gate and was waiting for her to precede him to the house where Abby stood, with what her young mistress was wont to call "the psalm-and-catechism-look," all resigned to greet this latest addition to the queer characters with which Hales Crossing seemed to her to be peopled.

Before they had visited half the stalls in the white barn Miss West was convinced that the reputation Noah Peabody had given Dr. Derick Cranston, of being the best veterinary for miles around, was not exaggerated. The little man knew all there was to know about horses. Bending over a lame foot, and handling a mouth that had chafed under too severe a curb, he was no longer the pathetic, half-starved tramp but a man of position—a doctor ministering to the sick. Even though his patients were only horses, his touch was as professional as that of an established medico in one of the big cities.

Of Dracula, when he had been formally introduced to him, Derick Cranston spoke with little enthusiasm: one of the Stamboul Blacks, a cross between the fleet-footed Arabian of the desert and the free-booting wild horse of our Western prairies. Strong and handsome, but well-nigh untamable. "No good except for breeding purposes," was the way in which he summed up his impressions.

The Killer, as though he understood

he was being dispraged, rolled a wicked eye and, when the little man ventured to lay a hand on the bars of the box stall, let out a roar that could be heard for half a mile. The next moment he had charged, two rows of yellow teeth bared for action.

(To be continued.)

Autumn Maple

What golden ichor rose through trunk and bough
From unimagined springs within the earth

With soundless flow the summer long,
That now
This fountain luminously comes to birth

And spills upon the frosty air a spray
That stains with gold this blue October day?

These showers that descend will deepen soon
To burnished pools upon the autumn grass
That seems to mirror some refugent noon

Whose sun is held immobile in the glass.
—Adelaide Love, in "Voices."

Aid to Aviators

The Dominion's newest weather bureau at Moosonee on James Bay should prove of great value to aviators, according to Andrew Thomson, chief physicist of the Dominion Meteorological Service, who has completed a visit to several northern stations.

The bureau, ranked as a first class station, will record temperatures, hours of sunshine, precipitation, wind velocity and other information necessary to the work of forecasting weather conditions.

As at other outlying stations, the Moosonee bureau will wire reports twice daily to the Toronto observatory, stations are already established at Fort Churchill, Chesterfield Inlet and in the Hudson Straits, and the new one will fill a gap and greatly assist the service, according to Mr. Thomson.

The Meteorological Service works under what is known as the "polar front method," which was worked out in Norway during the war years. Great strides have been made during the past few years, Mr. Thomson says, but reports every six hours and observations by means of planes would greatly facilitate the work of forecasting accurately.

The Moosonee Bureau is established at James Bay Inn. The wind instruments are on the roof and the other instruments are set up nearby. James Kingston, manager of the Inn, has been placed in charge of the station.

Remember—Abraham Lincoln rose to power as much through his great character as his great statesmanship.

Proper Toys Aid Self-Expression In Children

Play Things Help Learning—Children Bored Without Adequate Play

New Haven, Conn.—Children develop tantrums because they are bored, according to Dorothy Cannon Thompson of the Yale University faculty and director of the Cannon Nursery School of New Haven, a laboratory of child life where students in the Department of Education of Yale University study child development. It is Mrs. Thompson's belief that the lack of proper provision for play is probably the most common cause for the "cantankerous child."

"Children who are supposedly having the best of modern care in superior homes, in hospitals or in institutions are being almost universally hampered in their growth through lack of proper provision for play," Mrs. Thompson said. "Active, constructive play leading to growth is by no means a panacea for the difficulties of childhood, but the implications in the social, emotional and mental development are such that one can no longer afford to ignore the subject."

Seek Self-Expression.

"A child is always seeking self-expression. Just like a grown-up, he feels the thrill of accomplishment. In the cradle he wants to wave a rattle, because in moving his arms and making a noise he feels that he is really doing something. He is making things happen. After he begins to walk he is conscious of new possibilities. He wishes to carry things, to push things about, to build things and take them apart again. He sees his father and mother doing things he wants to emulate. Picture books, small-sized house-keeping toys, such as mops and brooms, miniature garden tools, enable him to fulfill this desire, while such things as blocks, paint, clay, hammers, nails and pieces of wood will give him the opportunity of carrying out his own ideas in an original way."

"At all times a healthy child is a dynamo of energy. The younger he is the shorter is the time he can stick at any one thing. It is, therefore, necessary to have on hand a variety of toys, especially things to manipulate and experiment with at first. Later he will need more constructive materials to use his increasing abilities. When children are 'cantankerous' it is often because they are bored. They have exhausted their immediate environment and have grown restless for new worlds to conquer. 'I don't know what has got into Johnny, he is so naughty.' It usually means that John Jr., having been provided with no suitable play materials of his own, has appropriated the kitchen clock, or the family carving set."

"At the age of six, if not before, a child must go to school to begin his formal education. But what a lot he must have learned to be ready for this; to manage his own body skilfully, to climb and run and jump; to find out about the world immediately about him; to know the meanings of a great many words; to distinguish between different sizes and weights, between things hard and soft, things round and square and how these all work together."

"These are some of the things that he may learn from his toys, and he will if his play materials are chosen with that end in view. Many of them

ORANGE PEKOE BLEND "SALADA" TEA

"Fresh from the Gardens"

Polluted Air

Disease Carrier

Smoke, Soot and Dust Cut Off Ultra-Violet Rays

Washington.—Polluted air, preventing human beings from receiving their due share of ultra violet rays ranks with polluted milk and water as a health menace.

Dr. Fred C. Tonney, of the Chicago Health Department, told the Public Health Association meeting here that ill effects on health of shutting off the sun's ultra-violet light by smoke, soot, dust, fog and other impurities are more serious and widespread than generally realized.

Dr. Haven Emerson, of Columbia University, reported there are even indications that it may be a contributing factor in causing rheumatic fever that results in illness and death of many children. The amount of heart disease in children caused by rheumatic fever falls off steadily from Boston south to Atlanta, he said, seeming to correspond to the increasing amount of sunshine as one moves south.

Decreased sunshine may increase activity of the rheumatic fever virus. There is no rheumatic fever in Puerto Rico, Dr. Emerson said, which has plentiful sunshine.

The Doctor's Task

By Dr. J. Bentley Squire, President of American College of Surgeons.

The passing of the "old-time" practitioner has been made a subject of much lamentation, and, from a purely sentimental angle, deservedly, for embodying, as he often did, the attributes of friend, priest and physician, he held a very personal relation to his patient, and his virtues have been loudly extolled.

The paucity of his scientific information was offset by a great breadth of character and a wealth of human understanding. These qualities will ever remain the most distinguishing signs of greatness in any physician of whatever period.

Every new step on the path of knowledge has opened to our vision uncharted deserts of human ignorance. If the goal of scientific progress is the production of human happiness, we of today may become objects of severe criticism fifty years hence for not having better utilized the scientific discoveries of this generation.

It behooves us to acquire the "old-time" doctor's human understanding, kindly disposition and humble attitude, for these are fundamentals of our calling, and also in order to neutralize any criticism of our own shortcomings which in years to come is bound to be made.

"Any changes for the better in football this season?"
"Yes. Understand that not more than one ticket speculator will be allowed to tackle a single patron at the same time."

Longer Ocean Liners

A change in the design of steamships, involving a five per cent. increase in length which would bring an increase in efficiency of almost 100 per cent. is near birth in the experiments of German scientists, Dr. Fritz Zeicky, physicist of the California Institute of Technology at Pasadena, California, said.

Dr. Zeicky said the principal experiments indicated that if most ocean liners were severed in the middle and a section inserted, increasing their lengths but slightly, an immense improvement would be obtained.

He told of tests near Hamburg, Germany, in which paraffin steamship models were propelled at the rate of 30 miles an hour. From these tests have come the theory of an improved design through increased length, the physicist said, and equally important research is under way on the shapes of prows and sterns.

The scientist predicted the future would bring considerable change in the types of prows. One of these would be designed with a bulge both at top and bottom, leaving the centre concave. Another proposes a straight profile, jutting forward at the top. Tests of this, the "barge" type, have indicated it is better adapted to rough seas.

Turbulent, discontented men of quality, in proportion as they are puffed up with personal pride and arrogance, generally despise their own order.—Burke.

Four-fifths of the world's motorcycles are in Europe

Polluted Air Disease Carrier

Smoke, Soot and Dust Cut Off Ultra-Violet Rays

Washington.—Polluted air, preventing human beings from receiving their due share of ultra violet rays ranks with polluted milk and water as a health menace.

Dr. Fred C. Tonney, of the Chicago Health Department, told the Public Health Association meeting here that ill effects on health of shutting off the sun's ultra-violet light by smoke, soot, dust, fog and other impurities are more serious and widespread than generally realized.

Dr. Haven Emerson, of Columbia University, reported there are even indications that it may be a contributing factor in causing rheumatic fever that results in illness and death of many children. The amount of heart disease in children caused by rheumatic fever falls off steadily from Boston south to Atlanta, he said, seeming to correspond to the increasing amount of sunshine as one moves south.

Decreased sunshine may increase activity of the rheumatic fever virus. There is no rheumatic fever in Puerto Rico, Dr. Emerson said, which has plentiful sunshine.

Danger in Smoke

Dr. Tonney explained that smoke falls hanging over cities, especially in winter, often have such far-reaching and unsuspected effects as making teeth more liable to decay, endangering health of mothers before and after childbirth, and lowering resistance to disease. Rickets, due to lack of sunshine, is one of the most prevalent of childhood diseases.

Layers of children's teeth built up when sunshine is deficient lack lime and are easily attacked by decay which spreads to the healthier parts of the teeth, Dr. Tonney said. He added that lack of Vitamin D, supplied by ultra-violet light, prevents mothers from absorbing from their food the extra calcium and phosphorus they need during pregnancy and the nursing period. Dr. Emerson found that children who have had rickets are especially susceptible to bronchitis, pneumonia, measles, whooping cough convulsions and tuberculosis.

"We can now provide a health motive for the clearing of the skies," Dr. Tonney asserted, "a motive as fundamental and far reaching as those that brought about the control of water-borne and milk-borne disease."

4-Century-Old Seeds Grow

Plants were raised recently in Kew Gardens, London, from lotus seed found in Manchuria and believed to be more than a century old, and even four centuries, or older.

Among the Royal stamp collectors, in addition to H.M. the King, there are the Queens of Italy and the Belgians, Prince Leopold, Crown Prince of Sweden, and King Fuad of Egypt.

Relieve that pain safely

You can always relieve that ache or pain harmlessly with Aspirin. Even those deep-seated pains that make a man's very bones ache. Even the systemic pains so many women suffer. They will yield to these tablets! Aspirin has many important uses. Read the proven directions in every package; and don't endure any needless pains from neuralgia, neuritis, rheumatism.

Keep a bottle of these tablets in the house; carry the pocket tin if subject to unexpected headaches, sudden colds. Quick relief, without any harmful effects; Aspirin does not depress the heart. Just look each time for the name Aspirin—and the word genuine printed in red on every box.

Every druggist has Aspirin, and if you ask for it by that name you are sure to get relief.

Aspirin is a trade-mark registered in Canada.

Champion Cheese Taster

He's the "big cheese" among the cheese-tasters. Donald Smith, a Mississippi youth, at a recent dairy show in Detroit scored highest and won the \$750 prize.

CHANCE IS EVERYTHING

She Won Success—and Cheerfully Turned Her Back On It
By Rene M. Worley

Old Sinclair had been doorkeeper at the Rotunda Theatre for more years than any of the older members of the theatrical profession cared to remember. He was a familiar, well-beloved figure—bushy grey hair, and kind blue eyes peering with the expression of a wondering child from behind steel-rimmed spectacles. To the actors and actresses who made their brief visits to the small provincial theatre, he was "dear old Sinny"; but to outsiders, young men who pestered for entry and infatuated stage-struck young women, he was an embodiment of grim determination and curt reticence.

In the opinion of one young man, Julian Hartley, the old man was nothing more or less than a "confounded, pig-headed nuisance." Night after night, during the run of the Belgrave Repertory Company's season, he appeared at the stage-door and asked to see Miss Carol Maybury.

And night after night old Sinclair made the same laconic reply, looking over the top of his glasses in severe disapproval.

"It's against the rules for a member of the company to come out and speak to strangers."

Young Hartley made a gesture of impatience.

"Well, let me in, then! I'm not a stranger, hang it! I'm her fiance!" he retorted testily.

Old Sinny's face expressed the opinion that he had "heard that tale before," and buried himself with unmoved finality behind the evening paper.

Later, after the show, when Carol met Julian outside and they went to a neighbouring cafe for supper, the young man complained bitterly:

"That old man treats me like one of the usual stage-door loungers."

Carol smiled.

"It's a shame!" she declared, in teasing sympathy. "But really, Julian, old Sinny is acting quite justifiably. Visitors are not allowed, except in the case of principals, of course. I'm only a very small portion of a crowd scene, remember, and an understudy who is never likely to have her chance," she ended, with a sigh.

Julian scoffed.

"Rot! You could play Marion Willard off the stage for all her reputation and outrageously extravagant salary," he declared loyally.

Her eyes were wistful.

"I should like to be able to prove that, anyway," she said slowly. "Until I have, my dear, I can't ever promise to marry you and settle down as the wife of a business man."

They had threshed this matter out some weeks ago. Until then, Julian had not realized how much her profession meant to this little auburn-haired girl, whom he loved, had loved for years. Carol wanted a chance to "prove" herself. When he had asked her to marry him, she had argued with him quite sensibly:

"If I marry you now and leave the stage, before even playing a decent part, it will mean that I shall be restless, perhaps dissatisfied, for the rest of my life. I wouldn't want to spoil our marriage—please understand, Julian."

And he had replied quietly:

"I do understand, darling, perfectly."

But the disappointment had been terrible. Somehow he had imagined that he and Carol would be married quite soon, living in a home of their own, in the life that he had often dreamed about. Still, if Carol was ambitious, it would have been pure selfishness on his part to try to oppose her. Against this line of thought, however, was the vague, nagging, persistent possibility that perhaps, if she did get her chance, and made a success of it, her ambition would become even greater, to the detriment of more ordinary ideas, like marriage and a home of her own.

To-night, facing Carol across the artificial carnations on the cafe table, he felt a surge of impatient longing, an urgent desire to hasten along the opening which would give Carol proof of her ability as an actress. If only Marion Willard would develop a sore throat or flu, or something he thought fiercely, anything to keep her away from the theatre for a night, and so give her understudy the chance to appear in her place!

So urgent was this idea that it was almost a shock to Julian on the following evening when, as he was passing the theatre in the hope of seeing Carol before she went in, he was arrested by the voice of old Sinclair.

"I've a message here for you," said the old man gruffly. He handed Julian an envelope on the back of which Carol had scribbled a few hurried lines.

"I'm so excited, and I hope you get this in time," she wrote. "M. W. is away ill, and I'm to go on in her place. I want you to see me, even if I'm bad. Love, Carol."

He folded the note, and his fingers trembled slightly. So Carol was getting her chance!

Old Sinclair regarded him indulgently.

"It means a lot to Miss Maybury," he said slowly.

Julian nodded.

"It means even more to me," he said earnestly. "After this, Carol will tell me definitely whether we shall be married."

He had meant to use the words "when we shall be married," but the subconscious fear he always felt made him use the word "whether" without considering.

"I see," said old Sinny.

He took off his glasses and polished them, opened his lips as if to say something, and then abruptly turned on his heel and walked away.

"Rum old fellow," Julian thought, and forgot about him.

Sinny was thinking:

"He's a nice young fellow, Miss Carol could find a dozen worse," and he was still thinking about Julian when the curtain went up.

His thoughts were vaguely troubled. He had somehow taken a great fancy to Carol Maybury. She was so young, so joyously fresh and eager, and disillusion had not yet touched her with mocking finger. In Sinny's private opinion she was wasted on the stage. This touring business was not the proper place for girls like Carol, who were essentially "home" girls. Old Sinclair always wanted to "father" girls like these.

"Carol will tell me definitely whether we can be married," Julian had said, shiny-eyed.

Poor young man! reflected Sinclair, he little realizes that to-night might make a definite decision of another kind. If Carol was a success in Marlon Willard's part, then she would be tempted by flattery, applause, and lavish contracts, long before she removed her grease paint for the night.

What was the use of an earnest young man offering a girl a nice little home, and dinner for two in the evenings, when against him stage managers, fellow-actors, and an eager, enthusiastic public were filling her ears and her mind with glittering, glamorous promises? Sinclair sighed so hard and deeply that it was almost a groan.

During the interval, between Acts One and Two, Carol came along to Sinclair's office. Her eyes were beseeching.

"If Mr. Hartley comes round, I want to see him," she said hurriedly.

The old man's eyes were questioning, kindly, and she added huskily:

"I'm not much good, the audience are receiving me like a cold sponge."

He tried to comfort her.

"They're always unresponsive to start with. Wait until your big scene—"

She faced him, and beneath the make-up he could see how pale she was.

"I'm not doing it. Merton thinks I couldn't stand up to it, so it's being cut down to fit my limitations," she cried passionately. "It's no good pretending, Sinny, Merton's right. I don't feel the part at all; I want to laugh sometime; at the sentimental lines I have to speak—that's not how an actress should feel," she ended bitterly.

"There's more in life than feeling as an actress should," commented Sinclair philosophically. "If I were a young girl, I'd rather be a wife with a snug little home, and taps to keep bright, and other worth-while things to do."

The girl moved her shoulders irritably.

"The only man who has ever wanted to marry me I have kept waiting whilst I proved myself an actress," she said, half wryly. "After to-night he's probably laughing at me. Fancy living with a husband who will always have a laugh up his sleeve! I don't think I could bear it!"

Somewhere in the distance a bell rang and she left him.

Soon afterwards someone knocked on the door and a chauffeur put his head round.

"I've got a bouquet here for Miss Willard, sort of condolence wreath from a rich admirer," he said good humouredly. "I don't know where she is staying—"

"Leave it here," old Sinclair cut in.

"I'll send it along to her."

It was a large bouquet, carnations and roses tied with satin ribbons; a card dangled from it. Old Sinny deliberated for a few moments, and then muttering: "Well, it's a chance anyway," he cut off the card, selected a piece of notepaper, and scribbled on it in pencil:

"I think you're immense—Julian."

He chuckled to himself.

"It's a good thing now that that young man was so emphatic over my getting his name right every time he pestered me." He rang the bell, and when a call-boy came, he instructed him to take the flowers up to Miss Maybury's room.

They were waiting for her when she returned, depressed and nervous, from the stage. In that moment of burying her face amongst the cool, fragrant petals, it seemed to her that the flowers were a symbol of all that Julian stood for in her life. Love and loyalty and protection.

When she went on for the last act she told herself glowingly:

"I'm playing to Julian, he thinks I'm immense."

The thought stimulated her, lifting her to heights of emotional force which had been lacking previously in her performance. She felt a faint but warm response from the audience. When the big scene came, she forgot the arrangement made by the manager, and went straight through with it.

"I will marry you as soon as you like," she was telling the slender young juvenile lead. "I want to be married; it's the only thing that mat-

ters, the only thing that endures; success only satisfies the vanity—I don't want success."

The curtain came down on a roar of applause, and somewhere in the audience Julian sat, wondering whether he had just imagined that Carol had spoken straight to him from the stage.

When he went round to the stage-door old Sinclair took him on one side and told him about the bouquet that had been sent in his name.

"You should have thought of it yourself!" concluded the old man severely.

"A young lady expects flowers now and again."

Carol came down the passage carrying her flowers. Her face was radiant.

"They're lovely, Julian; lovely!" she murmured softly.

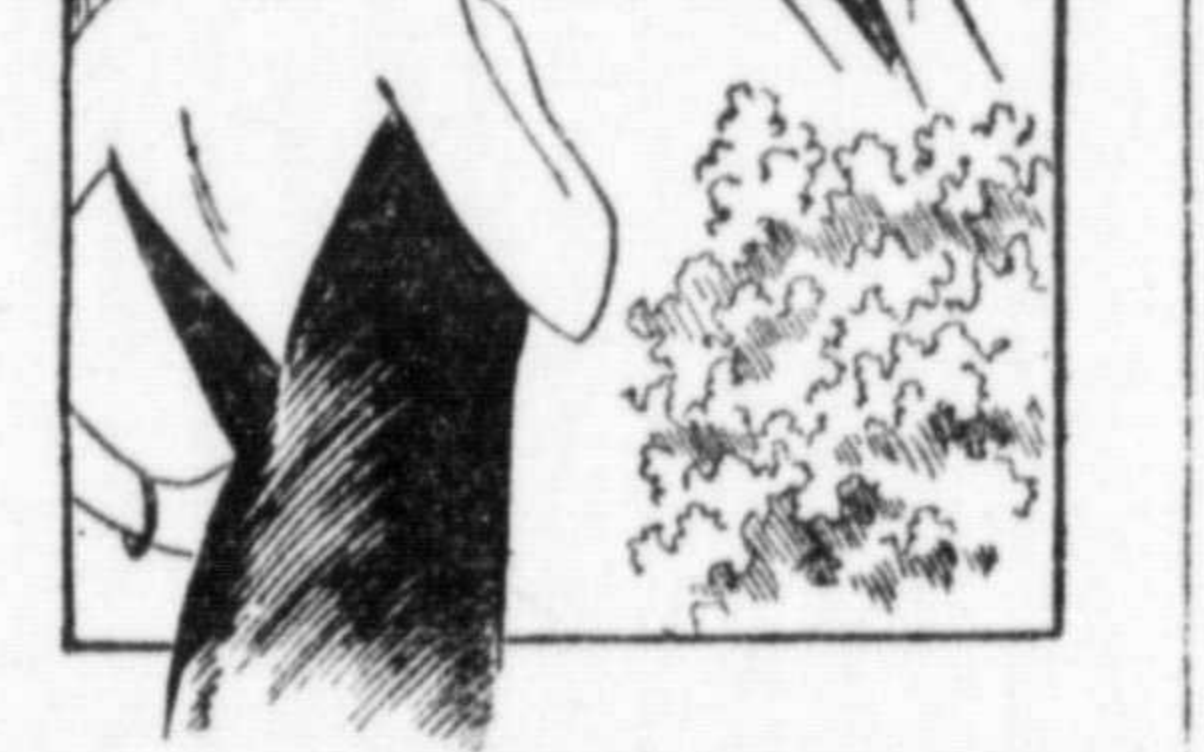

"I thought you would like them," Julian answered weakly.

Old Sinny prepared to lock up his office.

"Well, Miss Maybury, congratulations on your performance," he said heartily.

Carol smiled.

"Save them, Sinny, save them; you will want to use 'em again soon, because I'm going to be married," she said gently.—London "Answers."

She—"When father comes in tell him you love me."
He—"Let's wait—I feel so at peace with the world to-night."

A Study in Expressions

Cophorne, Sussex, baby show supplied this amusing photograph. Some kids take the judge seriously while others treat him as a pal.

Curability of Cancer

By Dr. Burton J. Lee

Cancer is a curable disease. This is a true statement, if the disease is discovered in its early stages. The symptoms of early cancer may appear of little importance to the patient, but their significance is readily appreciated by every good doctor.

Pain is almost never a symptom of early cancer. The public at large must realize the importance of this statement, for over and over again the patient will say, "I thought this condition of little importance because it was painless."

If each individual in this country 35 years of age or over would make it a rule to have a careful going over every six months, the cancer problem would be largely solved and many lives would be saved every year.

The Need For Peace

By Baron Craigmyle

The fundamental thing is peace. We are going to see great changes in the next few years, in months, perhaps. The whole energies of Great Britain will be directed to the work of the peace movement.

And there, if you will allow me to say so respectfully, is where your great nation is losing one of the finest opportunities in the great work of peace. It wants to help, it is trying to help, but somehow it does not seem able to join in the movement. That is why I am anxious to see this present election over. Whichever side wins—and I am strictly impartial, you will understand—I believe you will be closer to an understanding of the world's miseries.

A man may with more impunity be guilty of an actual breach, either of real good breeding or good morals, than appear ignorant of the most minute points of fashionable etiquette.—Scott.

Children's Humour

Honest Freddie

Little Fred, well trained by his parents, was bidding his adieux after a rather dull evening.

"Good-by," he murmured. "I had a pretty good time."

Well?

The children had been very attentive while the teacher told them about the animals. "Now," she said, "name some things that are very dangerous to get near to, and have horns."

"I know, Teacher."

"Well?"

"Motorcars Miss."

Lucky?

"That's lucky, isn't it, mummy?" cried Bertie, as he upset a dish of stewed rhubarb.

"Why?" cried mother.

"Well, it's lucky I don't like stewed rhubarb, isn't it?" said Bertie.

Definitions

The teacher had been talking about famous proverbs. "Now," she said, "can anyone tell me what this one means: 'Out of sight, out of mind?'"

The smart kid of the class promptly replied: "Invisible and insane."

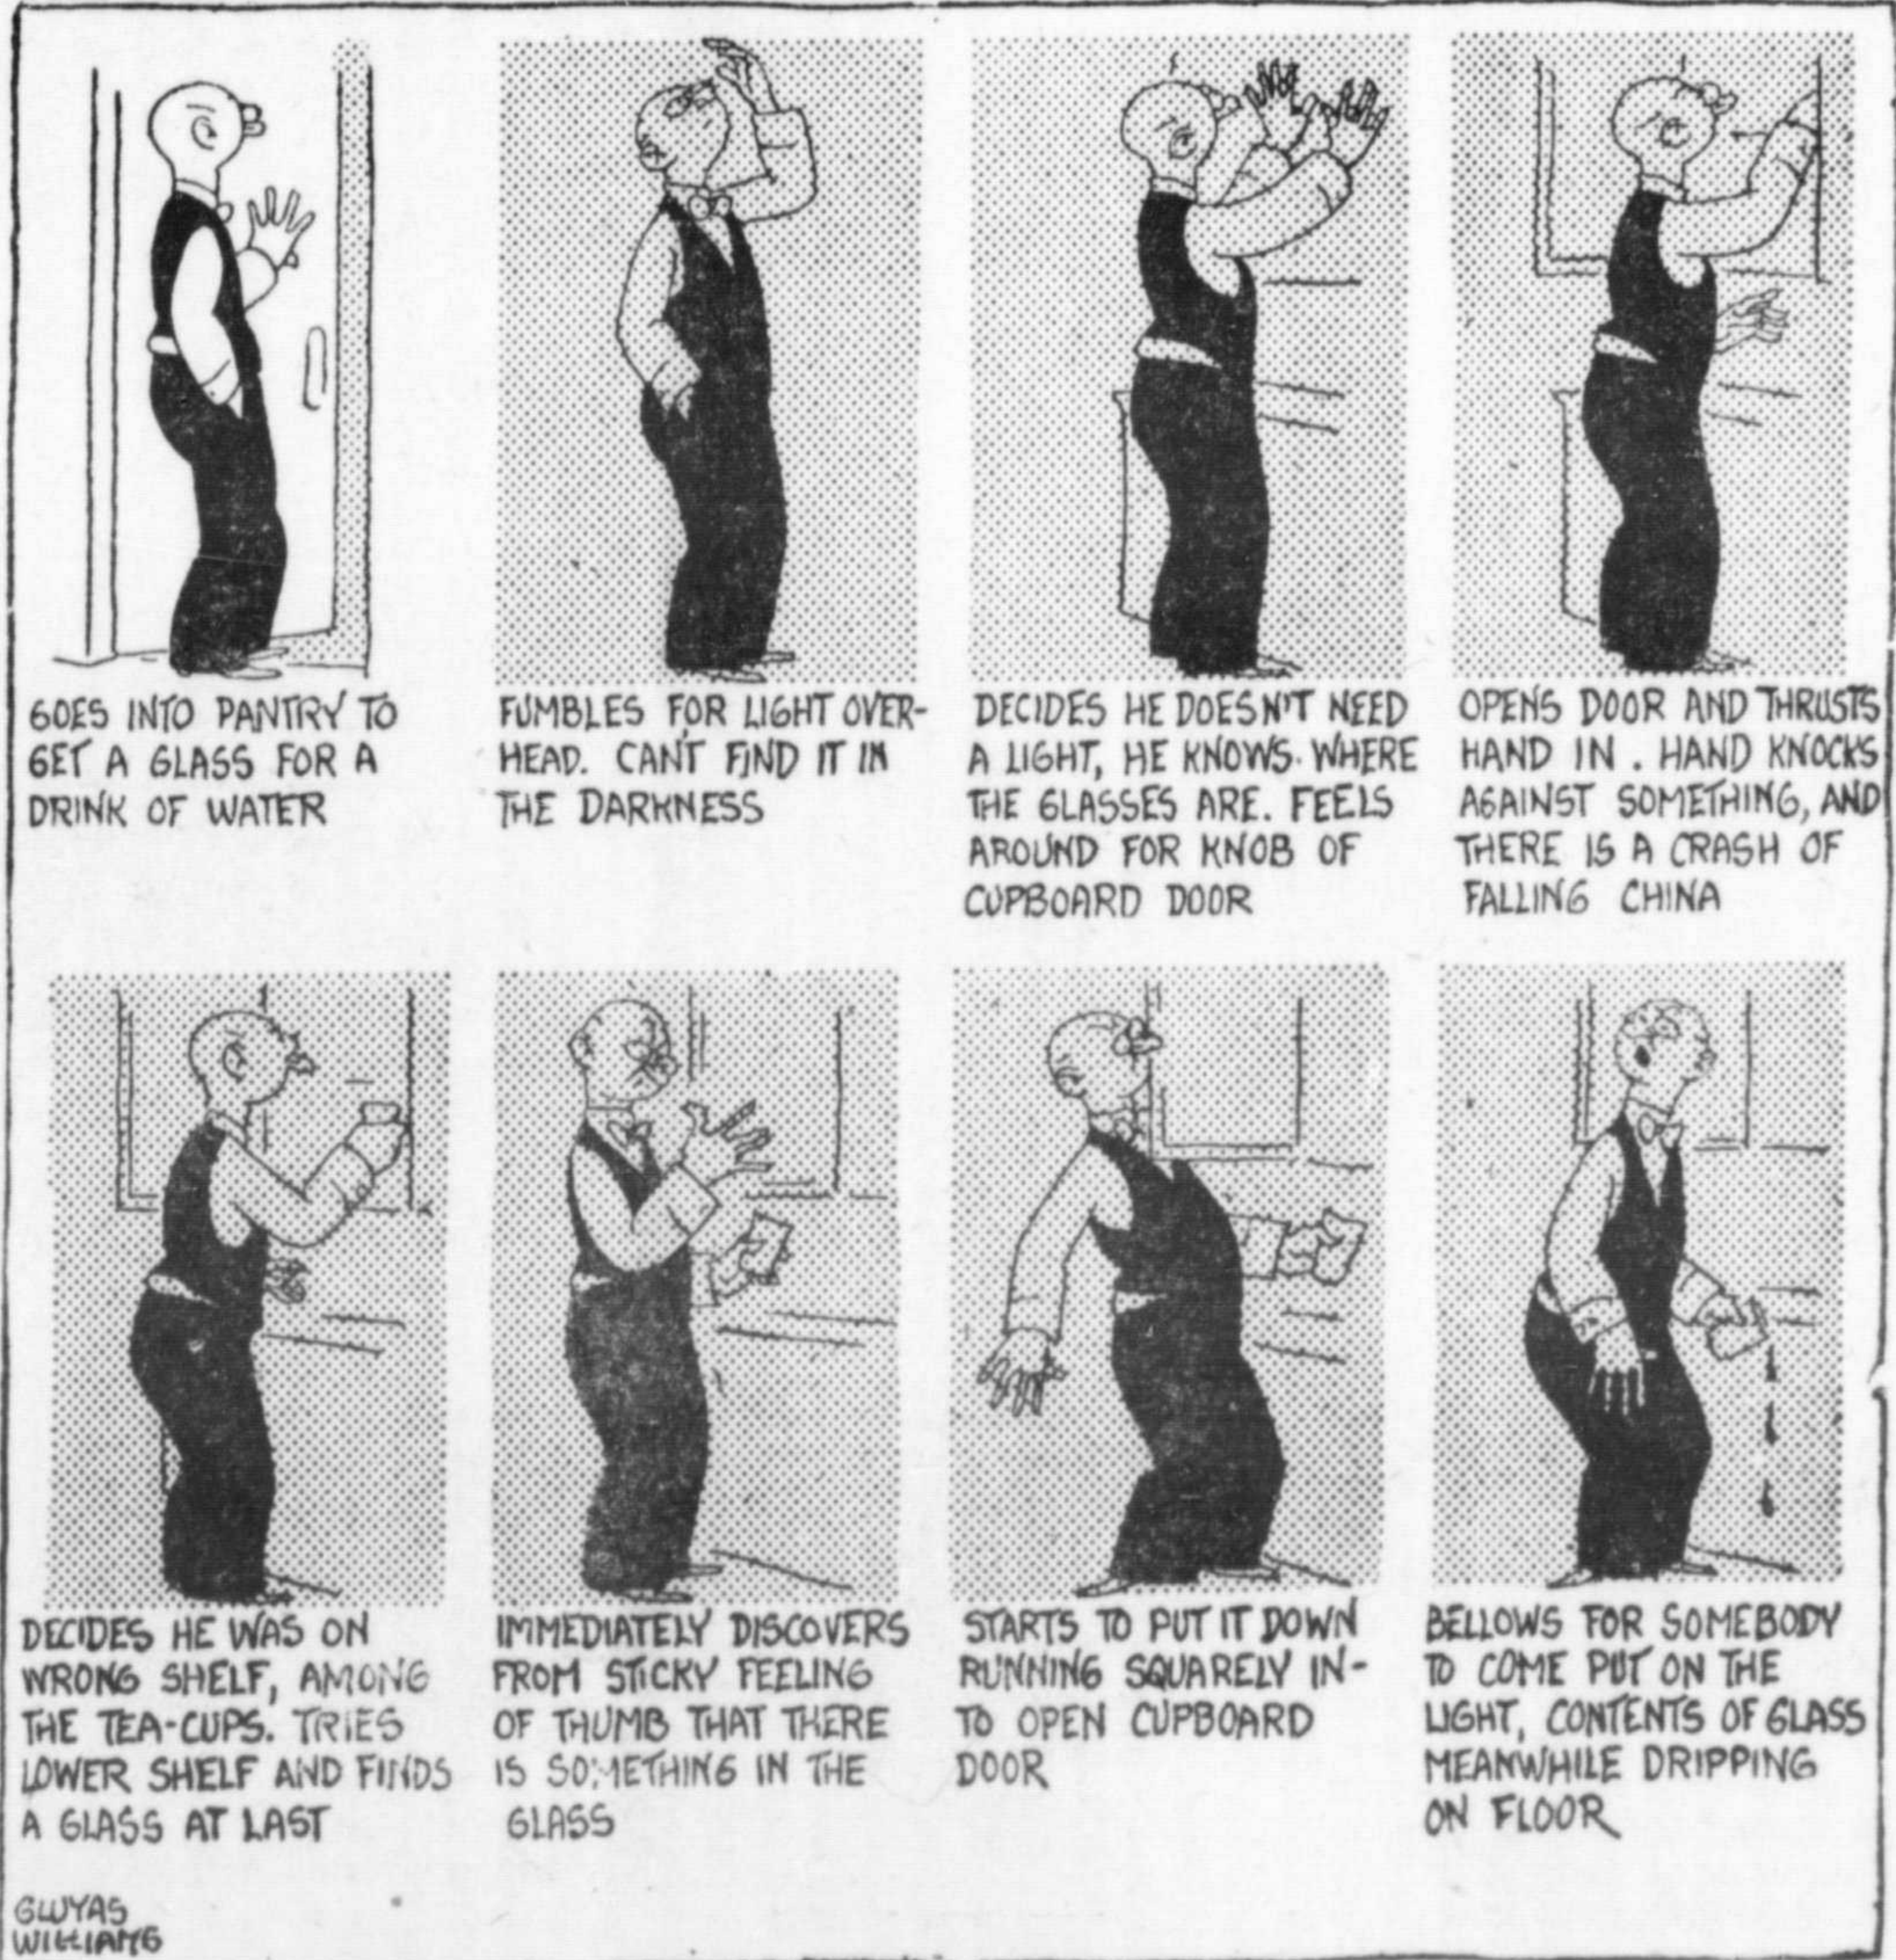

The Road

A beautiful name was given by the natives of Samoa to the mountain road which they cut for Robert Louis Stevenson, who had come to live among them. They loved the frail white man, and at infinite pains carved a path for his feet from the town on the sea-front to his home on the hill. And they called it "Ala Loto Alofa"—the Road of the Loving Heart! It was the road that led from every black man's door to the heart that loved them all. Could any emblem of the pilgrim path be more felicitous?

Contentment is better than riches they say. Oh, would that our grocer would take it as pay.

Balanced Diet For Good Health

Dentist Traces Teeth Decay to Lack of Proper Nutrition

Toronto.—Dr. Weston A. Price, famous Cleveland dentist, who addressed the Toronto Academy of Dentistry here at a banquet, declared dental caries and modern degenerative diseases as due to lack of proper nutrition and that modern foods were a curse and a blight to the people who used them.

"When you find people living on the same food as their primitive ancestors you find them with teeth 100 per cent. perfect. Not only that, but you find no heart trouble, or arthritis, nor lung trouble, and people living to a ripe old age," said Dr. Price.

"A grain of wheat represents nature's effort to put into seed the proportion and quantity and relationship of materials ample for a normal existence," he declared, and claimed that it was essential to leave the embryo in the grain of wheat, that that same embryo which caused the seed to grow in the ground was the vitalizing process in human food. It was not to be found in white bread and very little of it could be discovered by adding bran to flour. It would prevent tooth decay, arthritis, heart disease, lung trouble and many other ailments which were due to improper nutrition.

Recommends Diet

As a diet, he recommends whole grains, high vitamin butter, a little cod liver oil, but not too much, and vegetables, for perfect teeth and robust constitutions.

He pointed to the increase in heart disease, the greatest amount of it being found in parts of the country longest under cultivation, 75 per cent. of it having its origin in the first ten years of life, and 98 per cent. of the children under ten years having it, also had active dental caries.

He told of experiments with rats, of feeding white flour to one group, bran and middlings to another and whole wheat to another; of the superiority of the latter group and the inferiority of the first. "Rats seem to be chemically what they have eaten," he said and proved the same applied to humans.

One meal a day of balanced diet would prevent spontaneous fractures caused by decalcification, dental caries and a great many pathological conditions. He cited instances of children suffering from fractures, decayed teeth, heart disease, etc., with lassitude, standing at the foot of the class in school, and emaciated in form, who became alert, superior in school, and healthy through natural milk and high vitamin butter and whole wheat or grain.

Butter Vital Factor

Commenting on his extensive investigation into the diets of people with perfect teeth and those suffering from dental caries, he asserted that high concentrated butter was one of the best activators, but that 95 per cent. of butter tested a low level. In general you find the best butter where cows are eating green wheat or green rye," he said, and added that much good butter came from the Canadian West and an occasionally good sample from Ontario.

"There is something radically wrong with modern foods when they prove a curse a blight to a people immediately they begin to use them. In the high isolated parts of the Swiss Alps there is a 95 to 98 per cent. immunity from dental caries, while the same percentage tend to susceptibility where modern commerce has been introduced," Dr. Price stated.

He told of children who ate nothing but rye bread with a slice of high vitamin cheese that covered it four times a day and not one of those children had ever heard of a tooth brush nor did one have dental caries; of people who ate no fruit, yet had no decayed teeth; and of these people carrying enormous burdens until they were 70 or 80 years of age. Whenever people secured the diet which the surface of the earth produced, there was no decay, but when modern flour and canned foods were introduced, then followed rampant dental caries, he said.

Standardized Education

By Dr. I. Newton Kugelmann

Children are being wronged by enforced molding to the means of mass measurements. Standardizing plastic youth into average patterns is detrimental physically to growing children, troublesome psychologically to perturbed parents and false biologically to the national ideal.

Children are born free, not equal. They continue to grow in accordance with the body build that characterizes their racial and social groups.

Whether a child is to be short or tall, thin or fat, muscular or flabby, weak or strong, emotional or placid, handsome or homely, athletic or sedentary depends almost entirely on inherited factors. Medical supervision cannot exceed that of a service station which can never alter the fundamental human mechanism presented with complaint.

Palestine-Bagdad Air Route

Ten-passenger planes have been put in service on the new Palestine-Bagdad route, the flying time being seven and one-half hours, as compared with two days required by automobiles.

THE EQUITY

SHAWVILLE, NOV. 24, 1932.

Lotteries and Raffles Banned in Quebec

The Attorney-General's Department has declared war on lotteries, advising that persons conducting them within the province will be prosecuted. Instructions to this effect have been issued to the chief of police.

Not only will those conducting lotteries be prosecuted but also the sellers and purchasers of tickets, will be liable under the law.

The Department has decided to institute a vigorous campaign against all forms of lotteries and raffles. Paul Frenette, special law officer, said recently in making the announcement.

"There will be no exceptions to this ruling. This form of gambling has become so prolific that the department has decided it is time to put a stop to it, and therefore, after this public warning, prosecutions will follow," Mr. Frenette said.

Estimate of Canada's Wheat Crop Reduced

Canada's total wheat crop is now estimated at 35,800,000 bushels less than it was in September by the Dominion Bureau of Statistics.

In a crop report released last week, the total wheat crop for the entire Dominion was placed at 431,200,000 bushels, whereas in September the estimate was 467,000,000. Most of the decrease is in the Prairie Provinces, where last week's estimate was 411,000,000 and the September estimate 446,000,000.

"The obvious explanation for the reduction," the report states, "lies in the impossibility of estimating the effects of draught and other depressing influences on yield until actual threshing operations were in progress."

Quebec Reduces Stumpage Dues

The Quebec Provincial Government has put into effect, as of October 2nd, a reduction in the stumpage dues on all trees sawn for Lumber in the province, amounting in most cases to more than 50 percent.

Through an Order-in-Council passed by the Quebec Cabinet, the following rates have been made effective for the Winter season of 1932-33:

For white pine, oak, black walnut the rate, formerly \$3 per 1,000 feet, has been reduced to \$2.

The rate of \$3.50 for red pine, elm, ash, basswood, yellow birch and maple, has been reduced to \$1.50 per 1,000 feet.

Spruce, grey pine, fir, hemlock, birch and cedar, of which formerly \$2.70 was paid, will now be \$1 per 1,000 feet.

The reduction is being made in order to assist lumbermen in the province over the difficult times with which they are faced and for the purpose of promoting increased forest operations.

748 Government Investigations Cost \$53,869.49

Charges of political partisanship against Government employes resulted in 748 investigations at a total cost of \$53,869.49, since August 1930, it was shown by a return made in the House of Commons recently at the request of J. F. Pouliot, Liberal, Témiscouata.

Not one province was immune, but Quebec led the list with 458 investigations as against only 13 in Ontario and but two in British Columbia. There were 120 in Nova Scotia, 90 in New Brunswick, 30 in Saskatchewan, 16 in Manitoba, 12 in Prince Edward Island and 4 in Alberta.

The largest proportion concerned accusations against postal officials, there being 519 inquiries at a cost of \$35,067.81 for this department. There were also 143 investigations of Marine Department officials at a cost of \$9,431.21. In the province of Quebec there were 315 post office investigations at a total cost of \$21,026.29.

Sharp Upturn in Canadian Trade in October

There was a sharp upturn in Canadian trade last month, a report from the Bureau of Statistics states. Domestic exports in October totalled in value \$87,626,095, which was an increase over September of \$14,439,280 and an increase over October 1931, of \$1,088,178. With the exception of \$59,833,245 in May, 1931, and \$57,486,950 in November, 1931, it was the highest monthly export since December, 1930, when the total was \$66,819,638.

Imports have also increased substantially. The October imports totalled \$37,094,525 which was \$2,590,306 over September and the highest since June, 1932, when the total was \$40,743,105.

The export of foreign products totalled \$334,279 as against \$477,989 in September, an increase of \$56,290.

Exports of Canadian domestic products in the last three months, August, September and October totalled \$140,127,030 and in the previous three months, May, June and July, \$123,722,178, an increase of \$16,404,852.

Exports of Canadian domestic products in the six months ending October amounted to \$263,849,208 and in the previous six months ending April, 1932, \$252,248,213, an increase of \$11,596,995.

\$12,200 Conscience Money Returned

The largest single amount of "conscience money" ever received by the department of national revenue was handed to the department recently in the form of a cheque for \$12,200. A lady and a gentleman appeared at the office and stated they were residents of Montreal and that this sum equalled the duty, with compound interest, on articles brought into Canada over a term of years without paying duty.

The lady and gentleman explained that they had come into contact in Montreal with the members of the Oxford Group and had come with them to Ottawa, and that this payment of money owing the Government was a direct result of their changed outlook on life.

Larger Channel Likely

In order that the production of power at the Chats Falls development may be increased it is reported that the Hydro-Electric Commission of the province and Montreal power interests contemplate dredging that will permit a greater flow of water from Chats Lake through the only outlet into the forebay of the power house.

This channel at present is said to be too narrow for the rush of water from above, causing flood conditions, creation of fragile ice in Winter time and making it impossible to attain the capacity power production planned when the development was carried out.

No confirmation of the report of the contemplated work is available and it is considered doubtful that anything would be done at present, in view of economic conditions and at the present available quantity of power. The scheme suggested would entail an outlay of about one million dollars, it was stated, and would mean much employment as it would be largely expended for labor.—Ottawa Journal.

Quebec Studying Means of Giving Work to Lumbermen (Canada Lumberman)

Quebec is studying the means of giving work this winter to a large number of unemployed who formerly worked in the bush for lumbermen, pulp and paper companies or the forestry department. So far as forest operations are concerned the situation is that nothing yet has occurred arising from the Ottawa Imperial Conference to justify any additional wood being cut this winter, and consequently it may be expected that not more than 15,000 men will be employed in the forests this season. This is a thousand or two less than was the case last year. The banks, which have to finance forest activities, have made it clear to the companies that there is no justification for any enlargement in cut, and the opinion of the companies themselves follows on the same lines. Estimates are that there will be 800,000,000 feet of wood cut on crown lands this year, of which approximately one-tenth will be logs for the lumbering industry, by which is meant logs for the sawmills destined for building purposes as distinct from the logs which travel to the pulp and paper mills.

There is, of course, satisfaction felt at the fact that the British government has served notice on Russia that the trade treaty in force is to expire in six months, but this means nothing upon which any additional work should be cut, and consequently plays no part in the arrangements of any programs in the province.

World Honors Its Brave Men of Army and Navy

The Congressional medal of honor is the highest American award for valor. It is granted only to officers of enlisted men of the army who in action involving actual conflict with the enemy distinguish themselves conspicuously by gallantry and intrepidity at the risk of their lives above and beyond the call of duty. There is also a corresponding medal of honor for the navy. The Distinguished Service medal, established in 1918, may be awarded to "any person who, while serving in any capacity with the army of the United States, shall distinguish himself or herself by specially meritorious service to the government in a duty of great responsibility." There is a corresponding medal for the navy. The Distinguished Service cross is purely an army decoration to reward individual extraordinary acts of heroism in connection with military operations against an armed enemy. There is also a navy cross. Some of the most notable foreign decorations are: British Victoria cross; French Legion of Honor; German Iron cross; Belgian Order of Leopold; Japanese Order of the Rising Sun; Italian Order of St. Maurice, etc.

"Spinster's" Derivation

Spinster means one who works at the spinning wheel. In the olden days the work of making cloth for clothing was a part of the household duties and fell to the younger women to spin the yarn. As the prepossessing and marriageable girls had their minds on their fellows, the job usually became the responsibility of those who had had their chance and lost. So a spinster came to mean any unmarried woman, and is still today the legal phrase in England for any woman who has never been married.

W. J. EADES - PROPRIETOR.

Laying Mash

We are now manufacturing a Laying Mash which has been giving us excellent results with our own flock. This Mash is economically priced at \$1.90 per cwt. We would be glad to have you inspect our flock.

By the way, due to a mistake, Oyster Shell was wrongly quoted at \$1.40 per cwt. The correct price is \$1.20 per cwt.

NOTICE

IN THE MATTER OF THE ESTATE OF THE LATE DAME MARY ANN HODGINS, IN HER LIFE-TIME OF THE VILLAGE OF SHAWVILLE IN THE COUNTY OF PONTIAC, WIDOW OF THE LATE WILLIAM FINDLAY, IN HIS LIFE-TIME IN THE TOWNSHIP OF CLARENDON, IN THE SAID COUNTY OF PONTIAC, FARMER.

The undersigned will make application to the Judge of the Superior Court for the Province of Quebec, in the District of Pontiac, for letters of verification of the Last Will and Testament of the said late Dame Mary Ann Hodgins, which Will was executed in authentic form before H. C. Rowat, Notary Public, for the Province of Quebec, on the nineteenth day of October, Nineteen hundred and thirty-one under No. 1,635 of his Minutes.

The Petition will be presented at the Court House in Campbell's Bay on the thirty-first day of January, next, Nineteen hundred and thirty-three.

Shawville, Quebec, this twenty-first day of November, Nineteen hundred and thirty-two.

MRS. EVELYN BROWNLEE, EXECUTRIX.

Increasingly Abundant Crops of Various Kinds Grown in All Three Provinces.

Canada's prairie West is still known as a new country. Time is required even for full acquaintance of what the land itself is capable of producing. Grain and live stock are naturally the first consideration, for these two products with the vegetable garden will afford the settler the chief essentials—wholesome and abundant food. Later he will come to consider other possible products that would lend agreeable variety to his bill of fare and among these is fruit. It has often been assumed that fruit cannot be produced on the prairie. The idea is a mistaken one.

Almost any pioneer who has settled along the tree and shrubbery-bordered lakes and streams could certify that in such localities there is annually an abundance of wild fruit. Of this, raspberries, strawberries, gooseberries, black currants, saskatoons, cherries and highbush cranberries are most common. The muskeg territory north of the North Saskatchewan produces great crops of a small lowbush cranberry which in the form of sauce and preserves is counted of excellent flavor. In the spruce and scrub lands of certain localities immense quantities of succulent blueberries are harvested each year. Sections of Manitoba furnish regular crops of delectable wild red plums.

Pioneer settlers have been content for the most part to make use of these native wild fruits so prodigally provided and domestic production has been generally deferred. But in late years they have been turning to the possibilities in fruit growing on their own lands with gratifying results. The success of Mr. A. P. Stevenson, of Southern Manitoba, for example, in the production of apples has opened the eyes of others to what may be accomplished in this field. The Government Experimental Farm at Morden, Manitoba, too, has been growing apples for a number of years and hundreds of boxes from the orchards of Mr. Stevenson and the latter institution have found their way to market.

North of the Athabasca river at Athabasca—which is 100 miles north of the Alberta capital, Edmonton—Mr. Gautier has been growing raspberries successfully for a considerable period. He has seven acres in canes.

The territory about Lesser Slave Lake is peculiarly adapted to the growing of strawberries, which require plenty of moisture.

Ten years ago Mr. Herbert Lawrence and his wife started a nursery in the western outskirts of Edmonton overlooking the Saskatchewan. They are now growing successfully plums, crabapples, currants, cherries, rhubarb of enormous size, and great quantities of asparagus, for which there is a never-failing demand in the city.

Strawberries, raspberries, currants—black, red and white—native cherries, plums and crabapples are now to be found in many gardens of Saskatchewan and other Prairie Provinces, and it is not unreasonable to assume that before many more years they will be growing a large proportion of the fruit consumed in that territory.

At this season many parents are bringing their children to our Studio for gift portraits. No portrait is so completely satisfying as one made by a professional photographer. The only gift that pleases, a photograph of son or daughter, or a family group. H. IMISON, Photo Artist.

STRAYED

From the premises of the undersigned on October 25th, eight calves.—3 black and white and 5 red and white. Information that will lead to their recovery will be thankfully received by Jas. P. CONNOLLY, 5th Line Clarendon.

Ruins of Old Roman City

Timgad is a ruined city, 23 miles southeast of Batna, in the department of Constantine, Algeria. Timgad, the Thangas of the Romans, was built on the lower slopes of the northern side of the Aurès mountains, and was situated at the intersection of six roads. The auditorium of the theater, which held nearly 4,000 persons, is complete. A little west of the theater are baths, containing paved and mosaic floors in perfect preservation. Ruins of other and larger thermæ are found in all four quarters of the city, those on the north being very extensive. There are the remains of seven churches. Numerous inscriptions have been found on the ruins and from them many events in the history of Thangas have been learned. Thangas passed from history after the defeat of Gregorius, governor of Africa, by the Arabs in 647.

Road Versus Rail

It is now many years since the expresses of the railway companies running England to Scotland services used to race against each other, and there is today very little "sporting interest" in connection with trains. On the continent, a new form of railway racing was growing up some time ago, touring cars being run against expresses. This road versus rail racing is now discouraged in Europe. However it is catching on so much in New Zealand that a recent race between a car and the Wellington-to-Auckland train was broadcast throughout the country. The race took place at night and, despite the handicap of bad and very hilly roads, the car won by half an hour.

Mad Daughter's Sympathy

Iris had been sitting with an absorbed look on her face, gazing at her father.

"Why did you marry mother, dad?" she suddenly said.

"Because I was a fool, I suppose," he replied.

"Poor Mums," said Iris softly.

"What do you mean, miss?" asked father sharply.

"I mean that if was sad for mother to marry a fool, dad," explained Iris seriously.

Health in Economy

In order to determine the effect of a special diet, nine young women, students at the Washington Missionary college, lived four weeks on food costing 28 cents a day apiece. At the end of the period physicians pronounced them fitter, fatter and fairer.

DEATHS

The death occurred at an Ottawa Hospital, on Saturday, Nov. 19th, of William John Lusk, of Eardley, brother of Mrs. Trueman Lynch, of this village. The funeral took place on Monday afternoon from the late residence of the deceased to St. Luke's Anglican Church, Upper Eardley. Interment was made at Beech Grove cemetery.

Miss Lucy Baird

The funeral of the late Miss Lucy Baird, of Campbell's Bay, whose death occurred at her home on Saturday, Nov. 12, was held from her late home to Wesleyan Methodist Church on Sunday afternoon at one o'clock and was largely attended by relatives and friends. Burial took place in the United Cemetery. An impressive funeral service was held at the church, conducted by Rev. J. Weaver, of Shawville. The late Miss Baird was born at Thorne 28 years ago where she resided until 11 years ago when she came to Campbell's Bay with her mother, now Mrs. John Armstrong. Her father, the late Benjamin Baird, predeceased her several years ago. Her death will be greatly regretted as her kind and cheerful disposition made her loved by all who knew her, not only in the neighborhood, but for miles around the district. Besides her mother, she is survived by her step father, Mr. John Armstrong; a sister, Mrs. E. Gordon; and a brother, Mr. Leland Baird; also one step-sister, Mrs. Harry Hayard; and two step-brothers, Gerald and Elburn Armstrong, all of Campbell's Bay. The pallbearers were: Eric Brown, Sherwood Moore, Ira Sturgeon, Graham Smith, Lloyd Anderson and Carl Ebert.

STRENUOUS HOCKEY.

Goal-Tenders Have a Hard Time of It With Howe Morenz.

Howe Morenz, one of the most spectacular hockey players ever produced in Canada, is the nemesis of net-minders.

Clint Benedict, veteran backstop of Montreal, was ruined for hockey purposes by Morenz's streaking shots.

HOWE MORENZ

Twice the sizzling drives struck him in the face, the second breaking his nose and crushing his cheekbone. From these injuries he never fully recovered and drifted to the minors.

Joe Miller was knocked out by one of Morenz's bullet drives. In a game between the Maroons and Canadiens Morenz catapulted into the Montreal nets on a hurricane scoring drive, crashed into Goalie Normie Smith and drove him against the post so hard that the goalie was taken to a hospital with lacerated muscles.

JAPANESE BEAUTY CONTEST.

Girls Too Modest to Compete Other Than by Photographs.

Japanese girls are too bashful to appear in person at a beauty contest, but 2,309 of them submitted photographs when the Weekly Asahi journal held its "Miss Nippon" contest, says a special English supplement of that journal.

Miss Tsuneko Tawa, 23-year-old daughter of a Japanese doctor at Tokuyama, was adjudged the most beautiful.

Here's what the Japanese paper says about her:

"She likes sewing and the tea ceremony; that is to say, she is a girl of genuine Japanese tastes. She is a vegetarian. In order to preserve her beauty, she thinks, a girl must enjoy deep sleep. She is well educated and amiable. Her face possesses an expression that might be called mystic. It is like the face found in images of the Goddess Kwanon."

The New Microscope.

A new super power microscope which magnifies objects to 5,000 times their normal size has been perfected by D. Royal Raymond Rife, of San Diego, California. Six quartz lenses are used in this powerful new instrument which magnifies on a scale which would make an ant appear larger than an elephant.

CANADA

It is the Only Way

Severe penalties for reckless driving are being imposed by magistrates in the United Kingdom. One 20-year-old driver of a motor van was disqualified for 25 years from driving any motor vehicle, and fined \$15 and costs. He had been driving a motor van which swerved across the road, mounted the sidewalk, knocked down a lamp standard, and killed a pedestrian. His explanation was that a "jar" wrenched the steering wheel of the van out of his hands. Another young man, son of a former Secretary of State for the Dominions, was fined for reckless driving and deprived of his license to drive for five years. It is the only way to deal with those who so flagrantly abuse the convenience of a modern amenity and turn it into a menace.—Ottawa Journal.

Rioting is Futile

The unfortunate incidents in London and Belfast show how useless demonstrations of this kind are to settle our present difficulties. Baton charges and revolver shots are certainly not going to provide food for the hungry and drink for the thirsty. Everyone knows how the people are suffering. In unhappy days like these they are always inclined to lay the blame on the social order of the day and the detonating action of a few agitators is enough to cause an explosion. Imbued with revolutionary ideas, the latter take advantage of bad times to excite the passion of the crowd. They egg it on against the authorities and forcible repression becomes a necessity. While honest and brave fellows are being killed, they sneak away and hide in cellars and sheds.—Le Soleil, Quebec.

Autumn Weather

If the British Isles could be blessed in October with Canada's weather the health and energy of its people would greatly benefit. Who that has ever inhaled the fine keen October air in Canada will deny this! If the tired professional or business man could only realize the extraordinary health-cure a month in the Canadian woods can give there would be heavier steamship bookings and increased longevity for the health-seeker. In its wonderful autumn climate Canada has an asset and an attraction of great value. It is vastly appreciated in the United States, as is shown by the great tourist traffic but it is not at all sufficiently known in the Mother Country.—Canada, London.

Inalienable Advantages

Recent evidence goes to show that Canada, despite some discouragements in the last few years is certain to retain and enhance her prestige as a wheat exporting country. Export figures issued recently show that Canada's output practically dominates the market.—Fort William Times-Journal.

Five Real Fathers

Five fathers of Reigate, Eng. have been awarded certificates by the town council for their proficiency in knowing what to do with a fretting infant, how to detect mumps and measles, and other skill in tending their small offspring. These awards indicate that fathers can be adept in babycraft if they try.—St. Thomas Times-Journal.

A Bountiful Crop

The prices of farm produce may be low, but the harvest is large. Everything that the farmer raises has been produced in abundance this year. He may not have much ready money, but he need not go hungry. Nature has been prodigal this year. Taken as a whole, the principal field crops in Canada have seldom attained such total volume as during the present season or been of a higher quality. Yields were generally satisfactory in each of the provinces, despite sectional reverses due to weather conditions or other causes.—Gananquo Reporter.

Rest and Change

The editor of the National Revenue Review tells a good one about a member of Parliament for one of the Montreal constituencies. The member spent a vacation at a fashionable resort this year, and, when he returned, someone asked him if he had enjoyed the change and rest. "I really can't say," replied the M.P. "The bell boys got most of the change, and the hotel-keeper got the rest."—Border Cities Star.

Vehicles in the Dark

Another case is reported from Cadillac, where a farmer on the road with a wagon was run into by a car and one of the horses either killed or badly injured. Cases of this kind are happening all over the province and they will continue to happen until lights are carried at night on all vehicles. A few more deaths and casualties will likely have to occur before a proper law is put on the statute books. Going out at night without lights on a busy highway is flirting with disaster.—Regina Leader-Post.

THE EMPIRE

The Ottawa Agreements

The Ottawa agreements are in many respects experimental, and we make no prophecies about them. Only ex-

perience will show their value. But a certain measure of fairness is required of all who presume to discuss them.—Leeds Mercury.

Modern War

Whatever happens, the mood that declares statesmanship to be helpless and war inevitable must be fought at all points. It was precisely this kind of fatalism which paralyzed the will to peace before the great war. But there is a difference between then and now. The pre-war statesmen had at least the excuse that they did not know what the war was going to be. The only war which the war-makers had in mind was the war of the Schlieffen plan, the short sharp struggle which was to lead to victory "before Christmas." Post-war statesmen have no such excuse. They know that modern war is a sentence of doom for victor and vanquished.—London News-Chronicle.

The Australian Loan

By increasing taxation, cutting down all public expenditure to the bone, reducing internal interest rates, lowering wages and salaries all round, and drastically restricting imports, Australia has managed to meet in full her obligations to her overseas creditors. It is now the business of those creditors not only to show their appreciation, but also to help her to carry on the unequal struggle, by co-operating wholeheartedly in her efforts to reduce the burden of her overseas debt by well-judged conversion operations. By so doing they help not only Australia but themselves as well, for in these difficult times a wise creditor will make it as easy as possible for his debtors to meet their obligations.—London Times.

Peiping or Nanking?

As things look in China to-day, the question of the site of the capital would no longer seem to be of any great practical importance. The Kuomintang party is losing its influence and power from day to day, and the whole country is breaking up, and will most likely end in some loose federation of independent states. That is to say, for a long time to come there will be numerous sub-capitals but no central capital at all. Under the present conditions, therefore, the British and other Governments will be very ill-advised to listen to the advice of those who wish them to move their legations from Peiping.—W. Lewisohn in The National Review (London).

Arms and the League

To bury one's head in the sand is not an intelligent policy. On the other hand, to try and recognize the facts as they are courts the danger that a bad tendency may be fortified and set upon an irrevocable course. Those who before 1914 steadily foretold the Great War did their bit in producing it; for war is the climax of a general state of fear. By the same token faith is proved to be a practical weapon in human affairs. It follows that it is every serious person's duty to cultivate confidence in peace and to encourage others to a like confidence. But faith against the light is difficult. When a man sees that the League of Nations whose essential object is the encouragement of a general belief in peace, has become so enmeshed in the policies of those particular politicians who least believe in peace, as itself to provoke an active sense of fear among large sections of the people of the world, then it seems wise to look facts squarely in the face with a view to mending them.—George Glasgow in The Contemporary Review (London).

AMERICA

Tit For Tat, and Quid Pro Quo

"He that taketh the sword shall perish by the sword" is hard doctrine for tariff makers. United States exporters in textiles, in iron and steel, in glass, in telephone equipments, in automobiles and automobile parts, and in a dozen other lines will lose heavily as Canada puts into effect the Imperial preferences agreed on at the Ottawa Conference, minor hitches between Ottawa and London having been ironed out. With the British Islands, Canada's policy is quid pro quo. With the United States it is tit for tat.—Brooklyn Eagle.

Free Telegrams Increase Use of Telephone

London — Britain's campaign for more telephone subscribers continues, the latest advertising scheme being put into operation recently by the General Postoffice.

Nearly eighteen thousand persons not now subscribers and whose names were collected by the district postoffices have received telegrams as follows:

"I cordially invite you to become a telephone subscriber now, so that you may enjoy the advantages and comforts of telephone service during the coming winter.—Kingsle Wood, Postmaster General."

The General Postoffice believes the scheme will bear fruit. Anyway, it is an economical form of advertising, for the Postoffice is able to send telegrams for nothing.

The Prince of Wales Inspects Polar Relic

The Prince of Wales seems greatly interested in a kerosene stove used by the Swedish polar explorer, S. A. Andree in 1897 on his failed balloon trip to Spitzbergen. It was found in perfect condition, 33 years later.

For An End to Wars

By Henry L. Stimson, N.Y. Secretary of State.

We have a right to take courage. For ourselves, we believe that eventually the reign of peace will come. There will be among nations in respect to public war, war between nations, the same development that has been seen in individual communities in respect to private combat between individual men. We do not delude ourselves as to the difficulty of the road that lies before us nor as to the obstacles and trials which stand in our way. We are well aware that it will require the utmost patience and faith. We know that all such developments in human organization are extremely slow. We realize that it took centuries to eliminate ordeal by battle in the settlement of the individual quarrels of individual men. But we are unshakably confident that the same process is on its way among the nations and will eventually arrive.

Christmas Tree Cutting Begins

Montreal.—The annual cut of Christmas trees for the United States market has commenced in New Brunswick. Already crews are out in Albert County, cutting for New York buyers. Several carloads are expected out of Albert County this season. Most of the trees average from three to five feet in length, with some from twelve to fifteen feet for public demonstrations.

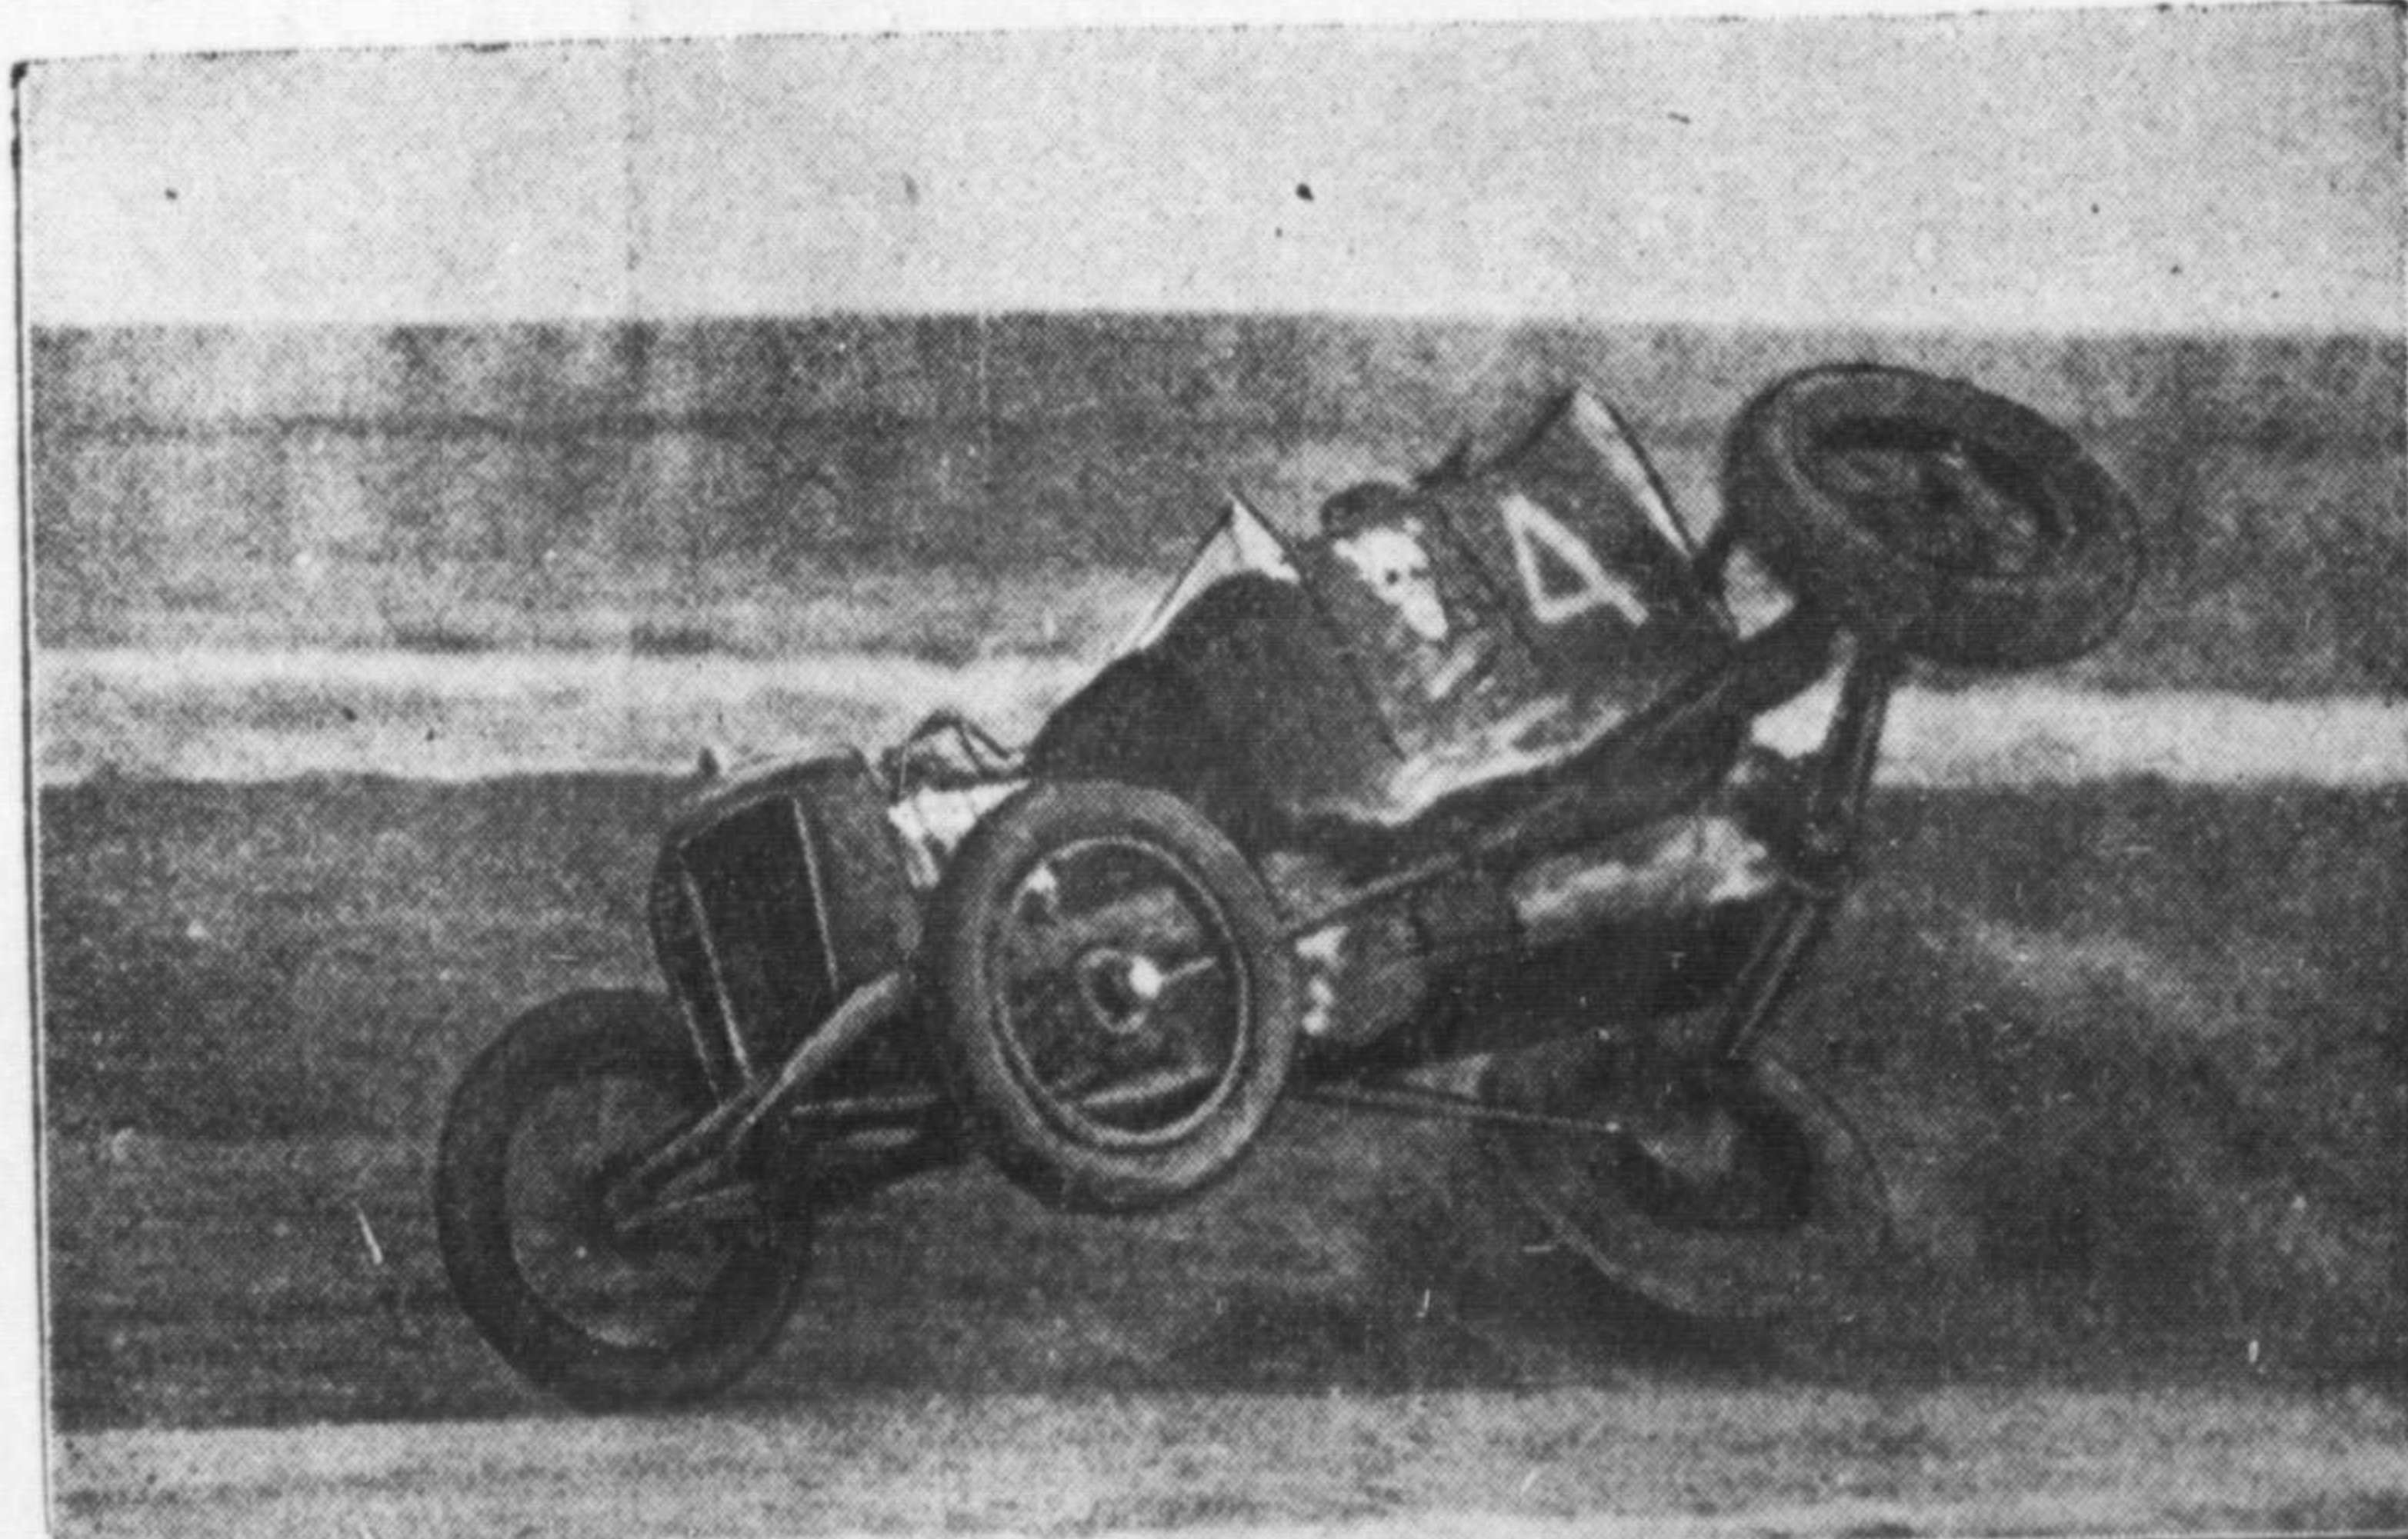

Bars Pistols From Schools

Knoxville, Tenn.—The school board of Knox County, Tenn., has barred the carrying of pistols to school. Other published rules include: Use of tobacco and chewing gum in the schoolroom strictly forbidden; no intoxicants shall be permitted on school premises, and novels, papers and periodicals having no connection with the studies are not to be allowed.

Metered Taxiplanes Installed

Berlin—Airplane taxis equipped with meters to calculate crow flight distances have been put into service at the Tempelhof Airport here. They make London in less than five hours.

Racing Demon Flirts With Death

Tommy Newton, track speed demon, skidded around and around Jeffries' track at Burbank, Calif., like this fifteen times without a mishap. In defiance of all the laws of balance—we'd say.

Wind in the Orchard

I have watched him half the morning,
And I can't control my laughter;
It is plain he is not getting
What he goes so wildly after.
He blows,
How he blows!
You would think he'd burst his face,
And the leaves just leap around him
With a tantalizing grace.

When they gather close together
He's more curious than ever,
No doubt he thinks a pile of leaves
Inordinately clever.
They huddle
In a muddle;
And their faces wrinkle 'up;
Then he strides about among them
Like a large, ungainly pup.

He is totally defeated,
For although he stops their chatter,
He has not divined their secret.
He has merely made them scatter.
They scurry,
In a hurry,
With a low, delicious sound
Like the mirth of many thousand
Merry leaves upon the ground.
—P. P. Strachan.

Football Gains Lead In Trinidad's Sports

Port of Spain.—Football, which has gained steadily in interest in recent years, has become the outstanding sporting event of Trinidad Island and near by mainland points in Venezuela this year, attracting prominent personages along with the mass of sports fans.

In a recent tour of Trinidad by a team representing the Club Sportativo, of Caracas, Venezuela, the Governor attended every contest.

Football heroes have come more and more to monopolize space in local newspapers.

Western Australia Has Heavy Wheat Yield

Perth, W. Aus.—A "bumper" harvest is anticipated in Western Australia. Acres and acres of splendid wheat crops supplied at the right time with plentiful rains are coming to fruition.
The Director of Agriculture Mr. G. L. Sutton, believes the average yield will be 15 bushels to the acre, and if he is right 50,000,000 bushels of wheat will result. The people are encouraged and there is a hopeful feeling everywhere.

Locusts Invade Mexico

Mexico City.—Scientific study of the origin of locust invasions, three of which have occurred in Southern Mexico this year, is to be undertaken soon by the Department of Agriculture.

Dr. Alfonso Dampf, chief entomologist, stationed at the Federal Agricultural Defence office in Chiapas state, has gone to the Guatemalan border to organize the fight on the third invasion, which began about October 10.

Memorial Honors 500 Miners

Treito, Italy.—A monument to 500 miners from the nearby region of Brez who died while working in mines of North and South America has been erected in Brez village, centre of a district where men are noted for their skill underground.

Preserve Royal Viking Tombs

Oslo.—Nine great tombs of Viking rulers of Norway have been inclosed at Borre, Vestfold, and the area made into a national park. The tombs are huge mounds under which were buried the kings with their ships, chariots and horses.

1,600-Yr.-Old Treasure Found

Chalon-Sur-Saone, France.—Fleeing, perhaps, from invading Huns, some old Roman buried his treasure on the banks of the River Saone. After 1,600 years workmen, deepening the river, came upon it. So far 150 bronze coins have been found.

Lay Insanity to Bad Teeth

Birmingham, England.—Two cases of insanity caused by bad teeth have been reported by the chief medical officer of the mental hospitals here.

Autumn Problems Of the Motorist

While the transition from summer to fall is slight, the motorist is much more sensitive to it than its owner often realizes. Apart from changes in operating conditions, the automobile had just emerged from its season of hardest use, and it needs attention on that score, too. So writes William Ullman in an article issued by his feature service (Washington).

Minor adjustments are all that are needed for the most part to make ready the car for the period just ahead. To conserve fuel, improve operating efficiency, and make starting easier, this might well begin with the valves. The odds are that summer's high-speed driving on long trips has left valve adjustment quite ragged. It has not shown up in warm-weather starting, but it does when there is a chill in the morning air.

The chances are against the average car's needing to have the carburetor mixture enriched. A majority, service authorities think, went through the hot weather with too rich a mixture, one that will be properly lean for fall. But the choke should receive attention. Many motorists have not used it for months. It should be inspected to determine that the valve is opening fully and freely, and the operating mechanism is in working order.

Spark-plug gaps that have made no appreciable difference in engine operation when the mercury was continuously high will interfere with both starting and smooth running when the range of temperature becomes autumnal. If plugs can not be cleaned and reset to produce maximum efficiency — apart from mileage records — they should be replaced. Proper plugs will help considerably now, and a great deal later when the temperature gets really low.

Several remnants of summer operation should be removed from all cars at this season. One of them is the scale that has collected in the cooling system. The average car has ranged far afield in the past few months, and its radiator has been filled with water containing a wide variety of impurities. The more of them of which the system is rid now by a thorough flushing with salt-soda, the better prepared it will be for the anti-freeze solution which it will carry during the cold months.

Another product of the season, we are told, may be a general looseness. Long periods of high-speed driving with vibration and jolting can hardly have failed to have their effect. Body bolts, Mr. Ullman advises, should be taken up not only to eliminate noises but to prevent frame strains that inevitably occur when the body is allowed to weave. He continues:

Tightening spring clips also will serve a double purpose—that of reducing the chance of spring breakage and increasing riding comfort. Engine-bolts in many cars also will be found to have worked free.

Other points where the car owner may spend a profitable few minutes with screw-driver and wrench are the bolts, nuts, and screws holding fenders, running-boards, and running-board aprons; the bolts which hold the radiator to the frame, and brace-rod running from the radiator to the dash; and the screws by which the door-hinges are attached.

Wet and leaf strewn streets, autumn's speciality in the way of driving hazards, are less dangerous if the car steers as it should. This involves lining up the front wheel-tightening front-wheel bearings, taking up any looseness in the steering-draw-link, and thoroughly lubricating the entire mechanism.

Another factor in seasonal safety is brake condition. Without going in for an exceptionally close adjustment, which leaves too little pedal-play for gently application, the car owner should make certain that the brakes are equalized. Unless he is possessed of more than average mechanical skill, the task of equalizing and adjusting brakes is one that should be left to a mechanic with the ability and the equipment to make a good job of it.

The fact is that brakes have been violently used in the period of high-speed driving now coming to an end, and that character of use is bound to have had its effect.

One prewinter form of conditioning that the car-owner can allow to go over until later is that of draining, flushing, and refilling the transmission and differential. It is still too early to supplant the heater lubricants used in these parts and, pending the need to change them, the car will operate well enough with nothing more than a replenishing of the present filling.

Because fall brings rain and dampness, and they in turn cause rust, the car-owner should be certain to cover up with a brushing lacquer or enamel any chipped or marred spots on the body of fenders. If the season should reveal any leaks around the top molding, the motorist will find several plastic fillers on the market with which these crevices may be treated.

When you are an anvil have patience; when you are a hammer beat straight.

"John and Mary and Tommy," a book of verse for children by Lady Eleanor McLaren Brown, and which is just being brought out in this country, will deservedly attain and hold a very distinct place for itself in the affection of Canadian children of all ages from coast to coast. The book is published in Canada by the Oxford University Press, Toronto.

The book is the story of John, age eight, Mary, almost six, and Tommy, two; three Canadian children, and how they spent a summer holiday in England. The voyage across the broad Atlantic, the delights and wonders of London, and the gallant adventures enjoyed during a month's stay by the sea at Hove, are all described in delightful verse written in easy story form.

Eleanor McLaren Brown, authoress of this entertaining new work is Lady McLaren Brown, the brilliant wife of Sir George McLaren Brown, European General Manager of the Canadian Pacific Railway; and the book, apart from its lively message to children everywhere is a further feature of the patriotic and imperial work Lady McLaren Brown is continually engaged in towards the closer and kinder relationships of Canada with the Motherland. The illustration shows the authoress and a few of the sixty delightful drawings by that admirable artist, P. A. Staynes.

London's Own "Mounties"

Mounted policemen are now being employed on traffic control at a number of points in the West End of London. They have an advantage over the ordinary constable at this job, because their seat on horseback gives them a greater range of vision.

The horses of London's mounted policemen are among the most highly trained in the world, and those on traffic duty are so good at their job that their riders can drop the reins and use both arms for signalling.

A London "mountie" on horseback makes an impressive figure, and you will often see one at the head of an official procession. The funeral cortege of the late Lord Plumer, for instance, was led by a policeman on a white horse. His presence in this po-

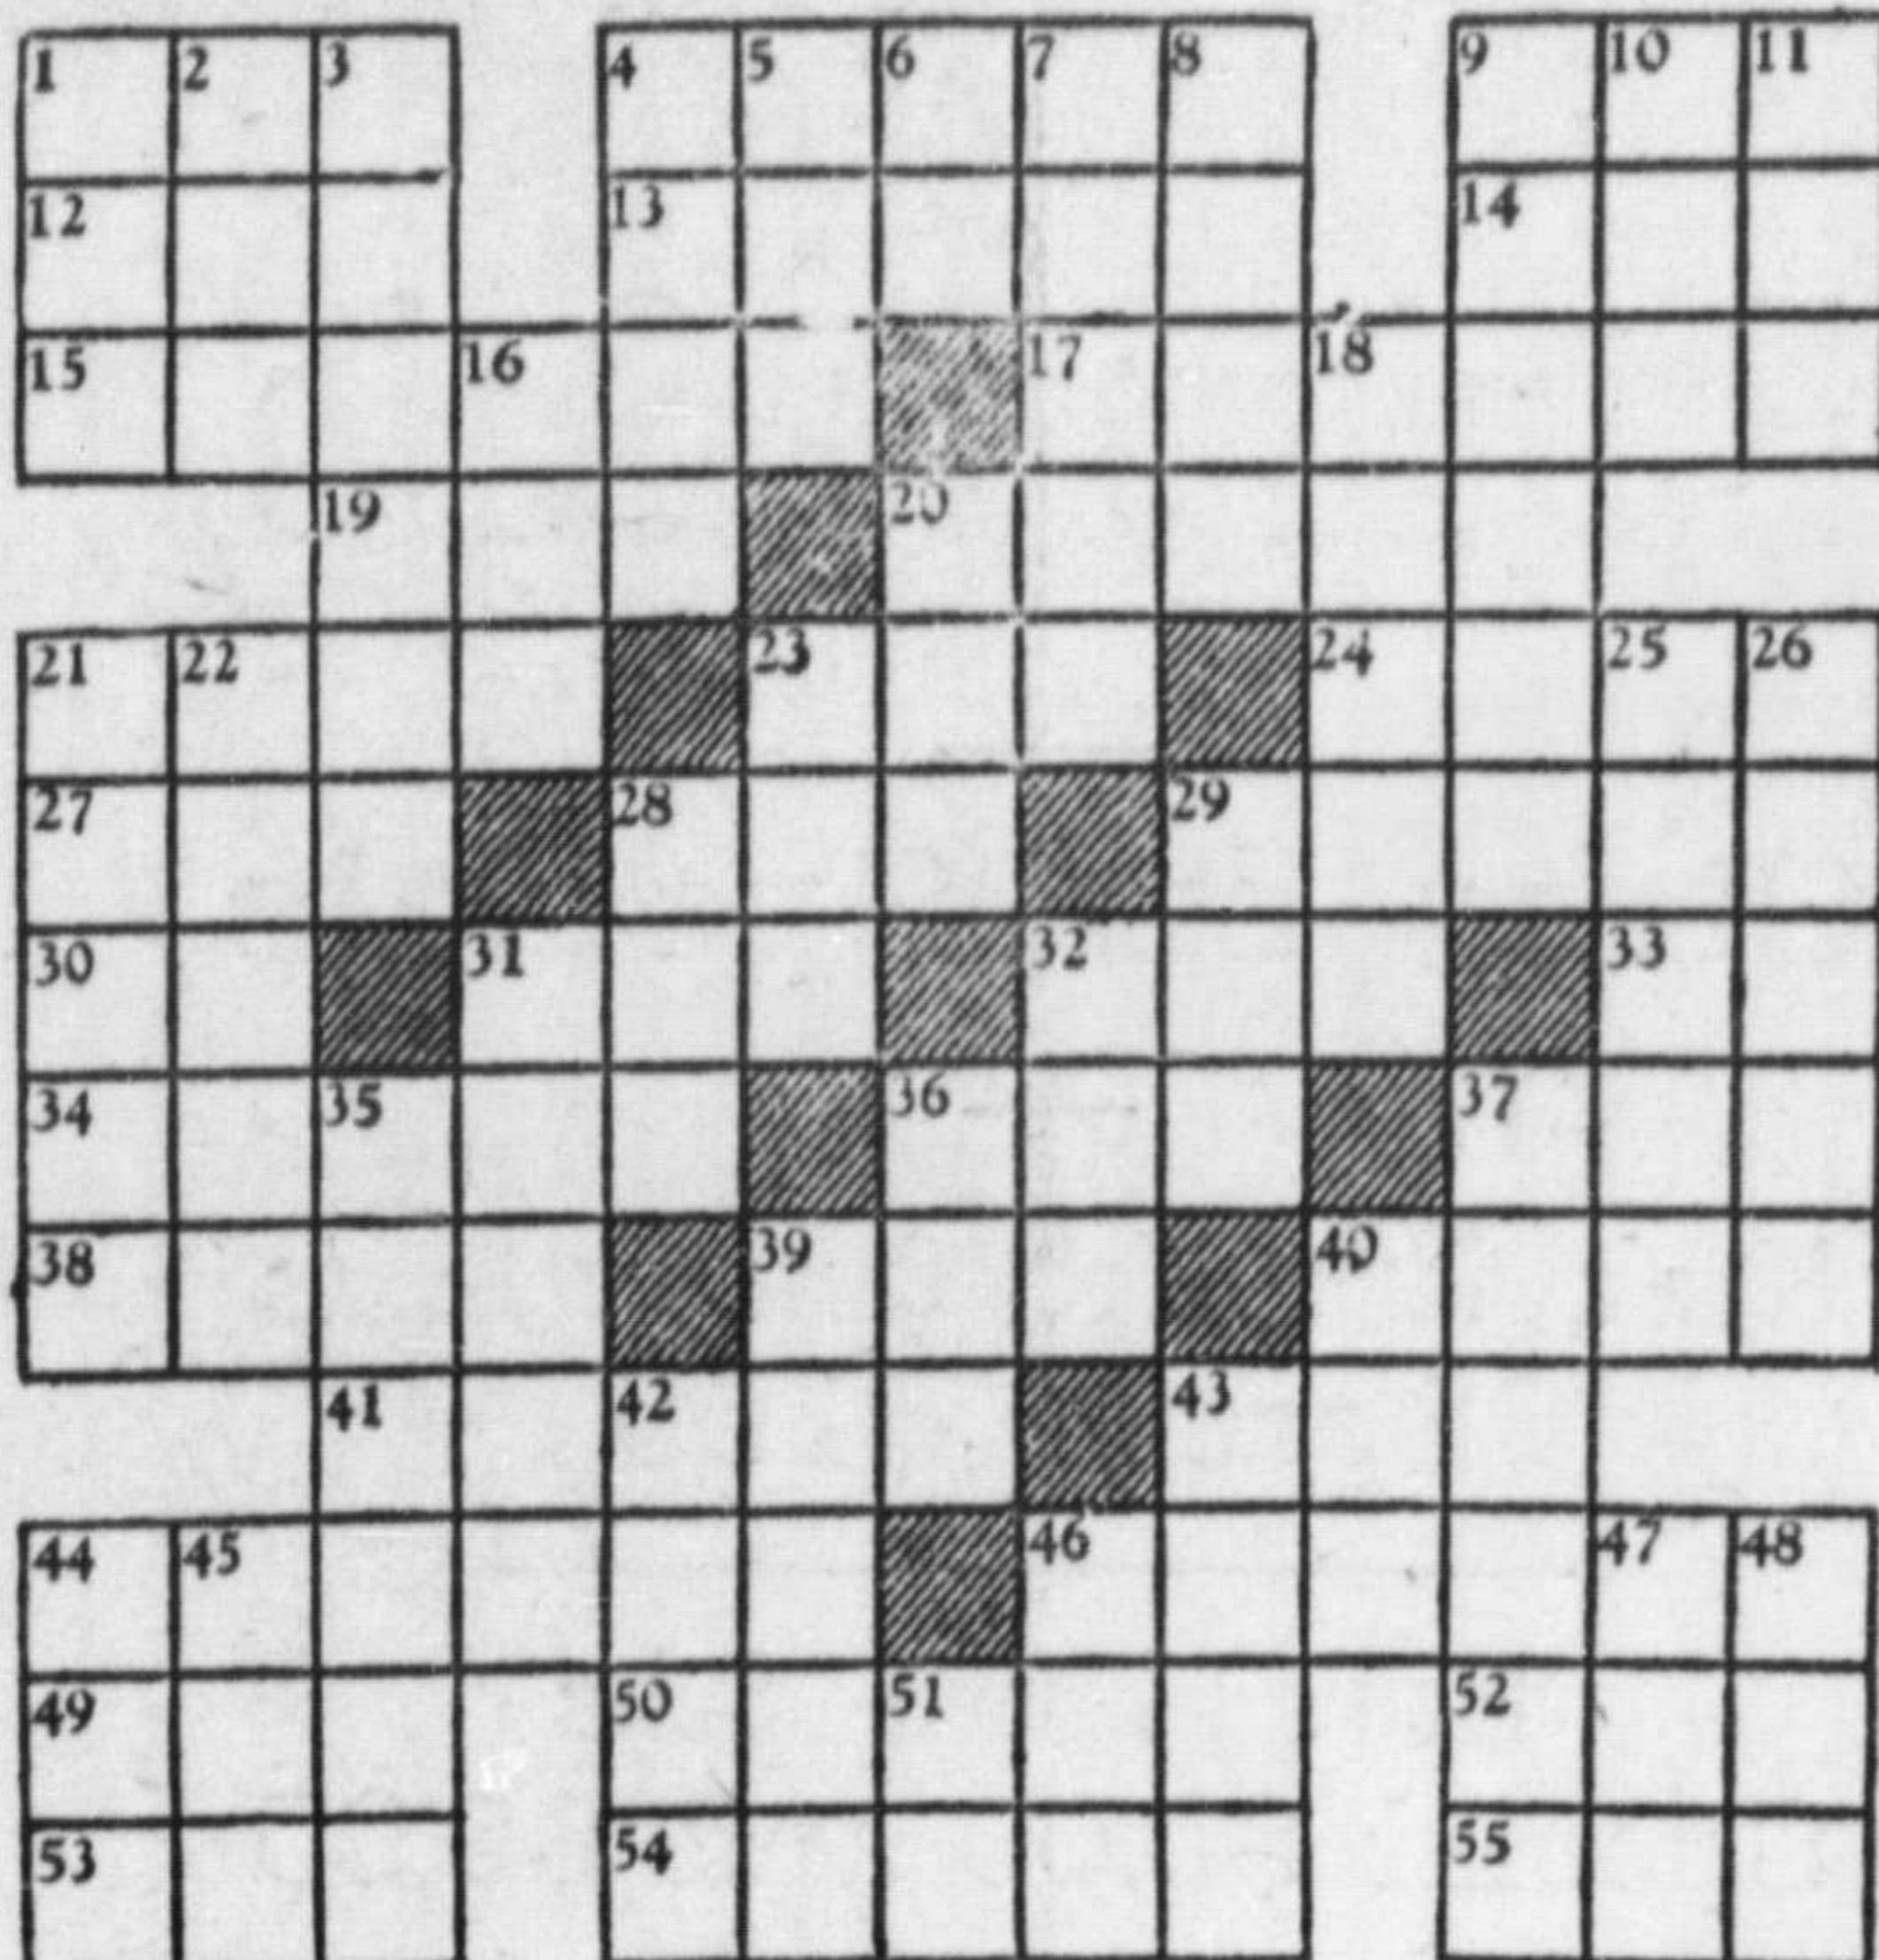

sition in what was essentially a soldier's procession was to mark that the civil authorities were in control.

Kangaroos Replace Pekinese As Pets

London, Eng.—Kangaroos are the latest pets in Mayfair drawing rooms. Society women are replacing Pekinese dogs with docile, baby kangaroos some two feet high. Except for an occasional flying leap over the tea table, they are said to be well-behaved.

There is also a momentary craze for small crocodiles, which are kept in a glass tank in the drawing-room until they reach a length of two feet or so.

Infected Rabbits Dangerous to Clean

Grubs Do Not Affect Eating Qualities, However, Declares N.Y. Authority

"At this time of the year when the rabbit season is open, hunters frequently find their game infested with small white grubs in the body around the intestines and in the loose space under the skin. Such animals are usually thrown away as sick or 'grubby.' This practice represents a waste of good food and should be corrected," says Dr. Justus F. Mueller, Assistant Professor of Forest Zoology at the New York State College of Forestry, Syracuse, N.Y.

"These grubs have the form of whitish, translucent, little vesicles or bladders, whence they get the more exact technical name of 'bladder worms.' If a rabbit harboring these grubs is eaten by a dog or fox the grubs mature in the latter animal and establish a permanent infection in this second host. But they are a relatively harmless parasite, and cause their host no evident injury or discomfort. It has been experimentally and conclusively established that these grubs are harmless to all other animals including man," advises Dr. Mueller. "Rabbits should not be discarded because of any

fancied danger lying in such grubs. The flesh of the rabbit should be cleaned in the ordinary fashion and in all respects safe and palatable.

"A disease, however, of danger to man has been traced to rabbits," says Dr. Mueller. "This is the fever known as tularemia. The disease is contracted not through eating infected rabbits but through cuts or scratches sustained in cleaning and dressing them. The liver of a rabbit with tularemia is somewhat enlarged and is speckled with whitish dots. Any rabbits which appear weak or sick before shooting should be regarded with suspicion. There is little likelihood of its occurrence this far north, but it is wise to be on guard against it. If a rabbit has been opened and its liver found to be suspicious, it should be discarded at once and the hands carefully sterilized."

Would "Fertilize" Fish Ponds

Tests made by fisheries research scientists working under Canadian authorities have indicated that water may be "fertilized" in such a way as to greatly increase the plant and animal life.

Last year's production of whitefish from Canada's inland fisheries totalled nearly 15,786,000 pounds. The catch had a marketed value of about \$1,445,000.

GIRL OF 20 WHO WEIGHED 196 LBS.

Tells How She Took 50 lbs. Off

AND IMPROVED HER COMPLEXION

Are you the young lady of whom people are remarking, "How she is filling out!"? (That's a good-natured way of saying "getting fat.") If fat is slyly and stealthily distorting your youthful figure, you should grapple with it at once. At 20 years of age this girl was in its toils. Read how she unburdened her young body of 59 superfluous pounds.

"About 12 months ago I was considerably overweight, being on the small side and weighing nearly 196 lbs. At 20 years of age, I was also troubled with headaches and pains in the small of my back; heaviness on rising, with a very poor complexion which broke out in spots every so often. Since taking Kruschen Salts all these conditions have disappeared. I have now gone down to normal weight, being 146 lbs., have a lovely complexion, and rise in the morning with no heaviness whatever."—(Miss) H.P.

The formula of Kruschen represents the residual salts of those famous European Spas whose waters have been taken from time immemorial for excess fat. These salts ensure a perfectly natural clearance of undigested

food substances and all excessive watery waste matter. When this wastage is allowed to accumulate, the body's chemistry is liable to store it up out of the way in the form of fatty tissue. Once Kruschen gets into your blood, disfiguring fat commences to melt away from your ankles and calves; your double chin commences to vanish, hips become slender; you won't lose 4 or 5 lbs. a day or anything foolish like that, but almost before you realize it pound by pound disappears—until you finally have the fashionable figure you have always desired.

Kruschen Salts is obtainable at all Drug Stores at 45c. and 75c. per bottle.

Arms and the League

By J. Ramsay MacDonald
The National Government cannot think of Europe and the world without the League of Nations. We stand by the League, we stand by the covenant of the League.

We want the disarmament conference to deliver something well and truly laid which will not become something belonging merely to the formal moral coinage of the word. I want a disarmament which will be a real contribution to the present problem of establishing peace.

I am not sure we have not perhaps played the part of peacemaker a little too long, but I would rather be blamed for that than for precipitating a situation which would make an agreement impossible. The keynote of our policy is not rearmament but disarmament.

YOUR LIVER'S MAKING YOU FEEL OUT OF SORTS

Wake up your Liver Bile

—No Calomel needed

When you feel blue, depressed, sour on the world, that's your liver which isn't pouring its daily two pounds of liquid bile into your bowels. Digestion and elimination are being slowed up, food is accumulating and decaying inside you and making you feel wretched. Mere bowel-movers like salts, oil, mineral water, laxative candy or chewing gum, or roughage, don't go far enough. You need a liver stimulant. Carter's Little Liver Pills is the best one. Safe. Purely vegetable. Sure. Ask for them by name. Refuse substitutes. 25c. at all druggists.

TOO MUCH ACID

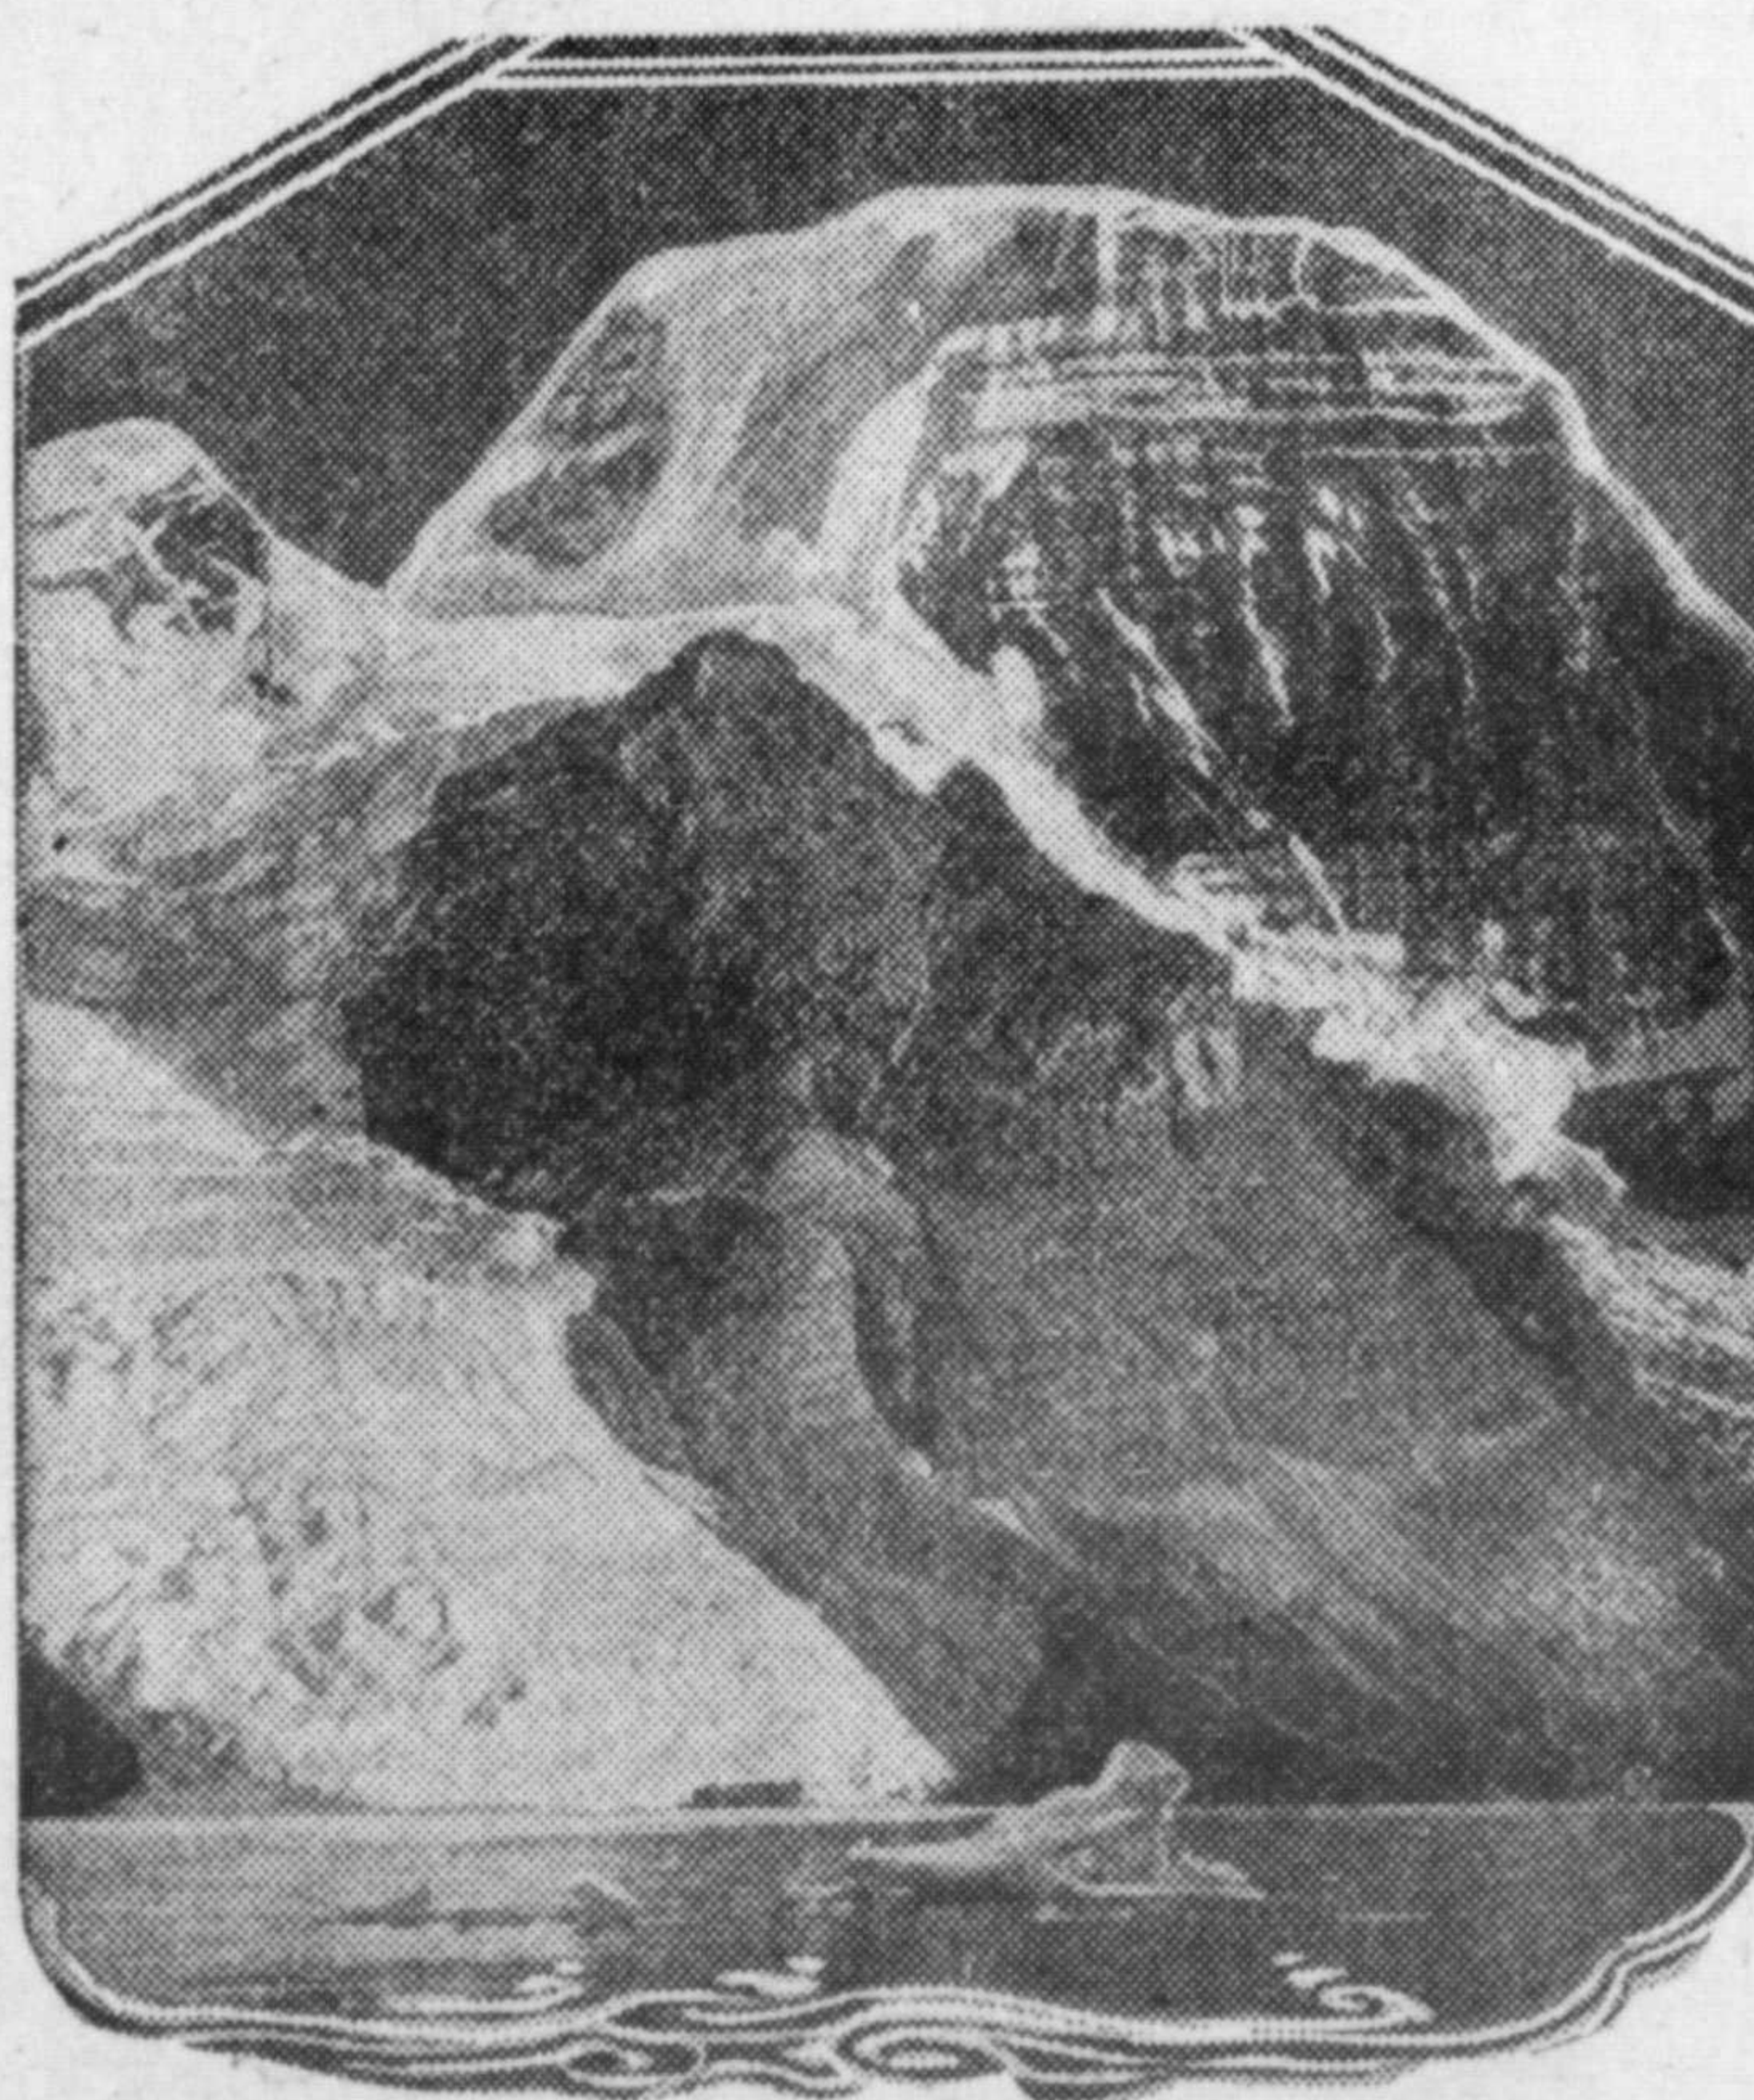

The right anti-acid offsets the harm otherwise done by excessive eating, drinking, and constant smoking, anything causing an acid condition. When "sunk" from such indulgences, Phillips' Milk of Magnesia will always straighten you out. A joy and comfort to hearty eaters, constant smokers. Get the genuine; substitutes don't act the same.

ALSO IN TABLET FORM: Phillips' Milk of Magnesia Tablets are now on sale at drug stores everywhere. Each tiny tablet is the equivalent of a teaspoonful of genuine Phillips' Milk of Magnesia.

"Made in Canada"

+ Do You Know? +

That one of the few advancing glaciers left in North America is this one that covers a large section of the northern slope of Mount Robson, British Columbia? It is known as the Tumbling Glacier because large bergs periodically break off from the toe of the glacier and crash into the lake in the foreground. One of these is seen floating in the lake. The lake is formed entirely by the melting snow and ice and it is one of the feeders of the Fraser River.

Close 545 Post Offices and Open 278 Others

A total of 545 post offices have been closed in Canada since Aug. 1, 1930, according to a return tabled in the House of Commons recently. New post offices opened since that date numbered 278, of which 117 covered their expenses.

Full time employes of the Post Office Department in Ottawa on Aug. 1, 1930, totalled 951 as compared with 880 on Sept. 30, last. Outside of Ottawa the full time employes on the former date numbered 22,983, and part-time, 237. On the latter date the full-time employes amounted to 22,143 and part-time, 175.

Well Known Chapeau Woman Dies at Home

Mrs. James Lee, highly esteemed resident of Chapeau, Que., died at her home there on Friday, Nov. 11th, somewhat unexpectedly, after about a week's illness.

Mrs. Lee was in her 80th year and all her life was spent at Chapeau. Her maiden name was Sarah Ann Jewell, and she was a daughter of the late Mr. and Mrs. Henri Jewell, pioneer residents. Twice married, her first husband, the late Martin Fleming, died about 45 years ago. Her second husband, James Lee, survives.

Of the first union, one daughter and two sons survive, Mrs. N. Rochon, of Waltham, Que., and Edward and William Fleming, of Chapeau, while of the second marriage, there is one daughter, Mrs. E. P. McCrea, of North Bay. Mrs. William Duff, Pembroke, and Mrs. N. J. Gareau, Ottawa, are sisters, while William Jewell, Sault Ste. Marie; John, of Sioux Lookout; James, of Pembroke, and Thomas, of Fort Coulonge, are brothers. Another brother, George Jewell, died in Ottawa two years ago.

The funeral was held at 9 o'clock on Monday morning the 14 inst., to St. Alphonse's Church and cemetery, Chapeau.

Bounty amounting to \$32,065 for the killing of 2,138 bears has been paid by the Quebec Government since July 1931. The bounty per head is \$5.00.

One of the speakers at a recent meeting of the Oxford Group of evangelists in Ottawa at present, without any reference to the penitentiary conditions, discussed this factor of self-discipline in an illuminating manner. Such discipline is something far deeper, far more vital, than the maintenance of order under the iron heel or the clenched fist. It is the discipline of one's own thinking, keeping watch over one's own tongue or pen, making orderly use of one's own time. . . . When self-discipline is thus brought into our own lives, according to the elementary but sure guidance of the Ten Commandments, the Lord's Prayer, the Beatitudes, there will be no grave problem of maintaining discipline in penitentiaries.—Ottawa Citizen.

Contract Let to Quebec Company

Contract for the construction of a new dam at the outlet of Lake Temiskaming has been let to the Stewart Construction Company of Sherbrooke at an approximate price of \$217,000. It is reported from Ottawa that officials of the Federal Government consider this tender a very reasonable one. For a score of years now there has been a dam for the conservation of water in Lake Temiskaming, not that there is any dependent power plant, but that through a dam the flow of water in the Ottawa is equalized. Navigation purposes will be served and the flow of sawlogs facilitated. With this and other equalizers at Bryson and Fitzroy Harbor the waters of the Ottawa will be fairly well controlled. It is expected that the Sherbrooke company will be busy on the contract for over a year. An expenditure of \$217,000 there will probably cause rejoicing in any communities near at hand.—Renfrew Mercury.

Persons observing errors in list mailed to them of prizes won at Shawville Fair, please report same at once in writing.

R. W. HODGINS

POULTRY FAIR

The Clarendon Farmers' Club will conduct a Poultry Fair at the Agricultural Hall on Friday, Dec. 9. The poultry will be graded there and then shipped to competing buyers, thus getting the producers the best possible prices. All parties who wish to dispose of poultry will please give the number of birds, of the different varieties to one of the committee, namely, R. J. Tracy, Hollis Barber, Verla Smiley or the Secretary, Claude Elliott.

It is urged that all parties who wish to dispose of their fowl through the Fair will have them crate fattened and properly dressed, as well finished fowl bring highest market prices.

NEW TOTAL DISABILITY BENEFITS

Are announced by the

Confederation Life Association

And provide as follows:

In the event of total disability from accident or disease, before the insured reaches age 55 (males) and age 50 (females) and during the continuance of such disability, the following benefits, based on a \$10,000 Policy, will be payable after six months' continuous total disability:

1. \$1.00 per month for 50 months;
2. \$50. per month for next 100 months;
3. \$10,000 in cash at end of 150th month;
4. Waiver of all premiums falling due during the period of disability payments.

In event of death or maturity during the 150-month period, the proceeds of the policy will be paid without any deduction of amounts paid on account of disability. The guaranteed values accrued dividends will not be affected in any way by the payment of the monthly income during disability.

I have all the records from the former Agency of DAGG & TUCK, which have been transferred to me. Would be pleased to attend to your insurance problems.

"Hot Dogs Not a Meal"

What constitutes a meal was one of the problems which Judge Casson, of Montreal, had to decide a few days ago. An act of the Quebec Legislature provides that every meal of 35 cents or over shall pay five per cent. to the Provincial Government towards the upkeep of hospitals. But the act did not define what was meant by a meal. Hot dogs and potatoes frites are popular along Quebec Highways, and the question frequently arose whether they should be taxed if the amount of a purchase came to 35 cents. Finally the Treasury Department decided on a test case. This time the inspectors selected sandwiches and beer. In each case the bill amounted to 35 cents, but the hotelkeeper did not collect the tax and was therefore summoned to court.

After consulting many dictionaries, English and French, Judge Casson was of opinion that the legislation did not affect an odd glass of beer, a sandwich or even a hot dog. He concluded that a meal is food taken by a person at regular hours. Hence, he adjudged, a motorist who stops on the highway at 3.30 in the afternoon, goes into a restaurant and orders a glass of beer, and a sandwich priced at 35 cents is not eating a meal but is merely satisfying what might be a false hunger promoted by fresh air. The case against the hotelkeeper was accordingly dismissed. That seems to have been a sensible finding.—Mail & Empire.
