Montreal Herald
AND DAILY COMMERCIAL GAZETTE.

VOLUME XLV. MONTREAL, FRIDAY MORNING, SEPTEMBER 30, 1853. NUMBER 183

THE MONTREAL HERALD
And Daily Commercial Gazette

Is Published Daily, during the six business months of the year, viz: from 1st of May to the 31st of October; and on Tuesdays, Thursdays and Saturdays, during the Winter months, when the Navigation is closed.

TERMS OF SUBSCRIPTION.

DAILY HERALD, £1 10s., payable half-yearly, in advance

WEEKLY HERALD, in Clubs of Seven, Five Shillings per annum; Single Subscribers, Five Shillings for Ten Months.

No Letter taken out of the Post Office, unless it is pre-paid.

ADVERTISING.

Six lines and under, 1st insertion, 2s 6d, and 7½d for each subsequent insertion.

Ten lines and under, 1st insertion, 3s 4d, and 10d for each subsequent insertion.

Over ten lines 4d per line for the 1st insertion, and 1d per line for each subsequent insertion.

YEARLY RATES.

One Square not to exceed 25 lines £12 10s, with the privilege of changing it occasionally.

Half Square not to exceed 12 lines £6 15s, with the same privileges.

Professional and other Cards not exceeding seven lines, £3 per annum.

No Advertisement to be considered by the year unless it is previously agreed upon between the parties.

The privilege of Yearly Advertisers will be confined to their regular business, and all other Advertisements such as Auction Sales, Houses to Let, Dissolution of Partnerships, Legal Notices, Ships, &c., will be charged extra.

Notices of Deaths, containing an invitation to attend the Funeral, to be charged 2s. 6d.

All Notices of Births and Marriages, 1s. 3d. each.

Regular Advertisers, and all others sending communications, or requiring Notices designed to call attention to Lectures, Soirees, Concerts, or any public entertainments, all Notices of Private Associations—every Notice designed to call attention to private enterprise, calculated or intended to promote individual interest, can only be inserted in the Editorial columns, with the understanding that it is to be paid for.

N.B.—All Orders for the insertion or discontinuance of Advertisements, must be in writing, a Book being kept in the Office for parties, calling personally, in which to enter their orders—verbal orders cannot be recognized.

NOTICES.

DISSOLUTION OF PARTNERSHIP.

THE CO-PARTNERSHIP of the Undersigned, under the Firm of MACPHERSON, CRANE & CO., at Montreal, and of MACPHERSON & CRANE, at Kingston, Prescott, Hamilton, Port Stanley, and Bytown, has this day been DISSOLVED, by mutual consent—D. L. MACPHERSON retiring therefrom. All Debts due to, and by the late concern, to be settled with JOHN MACPHERSON and SAMUEL CRANE.

JOHN MACPHERSON,
SAMUEL CRANE,
D. L. MACPHERSON.

Kingston, 23d July, 1853. 127

THE Business will be CONTINUED as heretofore, by the Undersigned, under the Names and Firms above mentioned.

JOHN MACPHERSON.
SAMUEL CRANE.

Kingston, July 23, 1853. 127

Notice of Co-Partnership.

MR. CHARLES E. SEYMOUR having been admitted a Partner in the business heretofore carried on, under the name of SEYMOUR & WHITNEY, the same will be CONTINUED from this date, under the style and firm of

SEYMOUR, WHITNEY & CO.

Montreal, 1st April, 1853. 40

NOTICE.

JAMES WILSON will CONTINUE to carry on the BUSINESS of the late HENRY WILSON, as BLACK and WHITE SMITH, BELL-HANGER, &c., Chenneville Street, near Craig Street.

Feb. 24. 9m—24

TO IMPORTERS & JOBBERS IN DRY GOODS.

THE undersigned, AGENTS FOR MANUFACTURERS, are prepared to Sell, by the package, the following articles, at prices (in Currency) equivalent to the Sterling Cost, with charges of importation:—

ROBERT ASHTON'S well known CAMBRIC PRINTS, in the usual infinite variety of style, pattern and coloring—and of the same perfect uniformity in quality—both as regards cloth and work.

J. RADCLIFFE & CO.'s, Rochdale, FLANNELS and BLANKETS, in assorted bales—at February rates—before the second great advance in wool had taken place.

YORKSHIRE WOOLLENS, CLOTHS, CASSIMERES, TWEEDS, DOESKINS, WITNEYS, BEAVERS, ex "New Messenger," shipped in May, at old rates.

GERMAN GALAS, from "Saalfield Gebruder," Hamburg.

GERMAN COTTON VELVETS, for Ladies' Dresses—a perfect imitation of Silk.

FRENCH MADAPOLLAMS, from Durkas, De & Co., Lisle.

W. HOBBS & CO., Vale-House Mills: LONG CLOTHS, of the finish known here as HORROCK'S.

G. F. ROBINSON, Spring-Bank, Stochport:—GREY and WHITE SHIRTINGS, in all the various makes of those famous mills.

BURY & CO., Manchester: MOLESKINS, long known in this market as the AWC finish

JOHN DICK & SONS, Bridgetown, Glasgow: SPOOL COTTON—the only competitor of Coates' in New York, and superior to any Thread yet introduced here—in zinc canisters, containing 50 dozen.

FARQUHARSONS, Lisburn: FAMILY HOLLAND, Bleached in Irish Bleach Fields, and scarcely distinguishable from Irish Linen.

CLOAKINGS—Lion Skins, Himalaya and Vicuna Cloths—and Drap de Castor—a beautiful and entirely new article.

W. WHITEFORD & CO.

September 7. 163

52 OVERCOATS
100 pairs of TROWSERS
100 pairs of BOOTS
100 pairs of MITTS
63 FUR CAPS

Specimens of the articles required may be seen, on application at the Office of the Chief of Police, at any time before the 1st October proximo.

By order,

J. P. SEXTON, City Clerk.

City Clerk's Office, City Hall, Montreal, Sept. 26th, 1853. b 180

CORPORATION OF MONTREAL.

City Treasurer's Office.

MONTREAL, September 14, 1853.

NOTICE IS HEREBY GIVEN, that the BOOKS of ASSESSMENT for the SAINT LOUIS WARD of this City, for the Current year, are Compiled and Filed in the Office of the Undersigned, and Proprietors and others rated therein, are requested to make immediate payment.

Should any person consider himself aggrieved by the Assessment on his property, Real or Personal, it is competent for him, at any time within three weeks from this date, to hand in an application in writing; addressed to the Committee appointed to investigate over charges, accompanied by Leases or other vouchers.

E. DEMERS, City Treasurer.

September 14. 3w mwf 169

G. L. ROLLAND,
WHOLESALE & RETAIL.
HOUSE NEXT TO S. GIRALDI,
Jacques Cartier Square, No 48, Montreal.
SIGN OF THE GREAT RED BOOT AND BEAVER.

THE undersigned informs his customers and the public in general, as well of the country as of the town, that he will open, on the 1st May next, in the above named premises, A MAGNIFICENT ESTABLISHMENT which will be unsurpassed by any other in Montreal. He will have on sale at moderate prices:

Leather of all descriptions; French Calf, Varnished Calf, *Maroquins,* Goat and Sheep-Skin; Leather for harness and saddles; stamped leather of all sorts; prepared Bullock and Cow Skins, Harness and Saddles, &c.

Ornaments and Furniture of every kind for Saddlers and Shoemakers.

Shoes of every size and quality, from the most delicate to the most strong and lasting, &c.

He will always have skilful workmen in his employ; and all orders will be executed with the utmost promptitude and fidelity.

His connection with the best manufacturers in the United States, places him in a position to satisfy the wants and tastes of all his customers.

Mr. Rolland hopes by his attention and the excellence of the Articles, selected by himself in the United States, to secure a portion of the public patronage.

G. L. ROLLAND.

Montreal, April 26, 1853 7m mf 50

ATLANTIC RAILING WORKS.

JENKINS & HAMLIN,
MANUFACTURERS OF
COMPOSITE IRON RAILING,
(Patented in the United States, January 13, 1852 and Patented in England, Aug. 7, 1852.)

THE invention of "COMPOSITE IRON RAILING" marks a new era in the manufacture of Iron Fencing. While possessing more strength and firmness than the ordinary Wrought Iron Railing, it is susceptible of all the elaborate beauty of the Cast Iron Railing, and can be furnished at a much reduced cost. By casting the ornaments on, and around the structure itself, a Railing is produced, the frame work of which is made of heavy Wrought Iron Rods and Bars, nowhere coming into actual contact, yet intricately connected and joined by Cast Iron Ties; thus securing the three most desirable qualities of any Manufacture viz:—Cheapness, Beauty and Durability.

As Jenkins and Hamlin retain the exclusive right to the patent for Manufacturing Composite Railing, in and for all the territory bordering on the Atlantic, the public are cautioned against purchasing articles manufactured under the above Patent from any person but the patentees or their Agents. WAREROOM, No. 398 Broadway, N. Y. Manufactory, Atlantic Docks.

Oct. 28 12m tf 207

A FARM FOR SALE,

SITUATED in RUSSELTOWN, County of Beauharnois, Lower Canada, Lot No. 2, in the first range of Concessions, containing ninety-four Acres, about Seventy of which are under improvements, with a durable Stream of Water running across the Farm, excellent Outbuildings and good Dwelling House, and an Orchard, principally Grafted Trees, Apples, Plums and Cherries, &c., situated within four miles of Ogdensburgh and Rouse's Point Railroad. The Farm will be sold with the Stock thereon, or without, to suit purchasers.

May 4. f w 1 af 3m—55

TO CORRESPONDENTS.

No notice can be taken of anonymous communications. Whatever is intended for insertion must be authenticated by the name and address of the writer; not necessarily for publication, but as a guarantee of his good faith.

We cannot undertake to return rejected communications.

Notices of marriages, births and deaths, can only be inserted when authenticated by some party known to the publishers.

☞TAKE NOTICE.—We take no letters out of the Post Office unless they are PRE-PAID.

FRIDAY MORNING, SEPT. 30, 1853.

NOTICE TO ADVERTISERS.

ALL ADVERTISERS by the Year or Agreement are charged extra at the usual rates of advertising, when they exceed the limits of their agreements.

The News from Europe.—Stirring times may now be expected on the other side of the Atlantic. The Czar is said to have refused the proposition of the Sultan. Can the spirit of accommodation on the part of the Western powers go further? It would seem to be impossible, if they are to retain any remains of self-respect. Hence, war would truly appear to be inevitable, and then—what then? The drawing up of the curtain on a bloody drama, of whose scenes no one has the programme.

Lecture on Flax by Professor Wilson, British Commissioner to the United States.

Mr. Wilson began by saying that being met for a practical purpose, he would proceed at once to the subject of his lecture, which was the Agricultural, or rather the Industrial treatment of Flax; and first it was proper to say something of the botany of Flax. It belonged to a not very extensive family of plants, which contained but about three genera and ninety species, dispersed very widely through Europe, Asia, North and South America, India, Australia, and New Zealand—in fact wherever the physical character of the soil was suitable for its growth. But its principal *habitats* were Europe, Asia, and South America. In South America there were several indigenous species; but their botany had not been so well made known as that of the European varieties. In Texas, however, there was one with yellow flowers, which, therefore, differed in that respect from the European kinds. In the Linnean classification flax belonged to the Pentagynia and Pentandria, that was to say that all the parts were in five's—five stamina, five petals, five stigmas, &c. The seed vessels were thus divided into five cells with imperfect separations attached to the dorsal exterior. These usually contained eight seeds, two cells being commonly empty. The seeds were of a dark brown colour, and flattened shape, with shining exterior and sweetish mucilaginous taste. They contained a quantity of oil which gave the plant much of its industrial importance as in this country especially, the seed was usually sent to the oil presser, who extracted some twenty per cent of oleaginous matter, leaving the residuum in the shape of oil cake, employed as food for cattle. The plant grew from two to three feet high; the top having small branches terminated in due time in flowers succeeded by seed vessels. The flowers were white, red and blue, usually the latter; but as the white seemed to be rather the stronger plant it had been suggested by a French chemist that as the white flowers gave a certain modification of the colouring matter to the leaves, the same modification might be extended to the fibre. Another Frenchman had since been growing his varieties to test this idea; but so far without any results that supported its truth. All, therefore, that could be done was to go on cultivating the blue variety. There were many varieties of flax which grew wild, and were chiefly useful in indicating the qualities of soils; and there was one thing in favour of the entire class—they were all harmless. Some had, however, a slight medicinal quality. In South America, one was used as a tonic and aperient; and the *linum catharticum* was also of an aperient quality. However, the only member of the family of which much notice need then be taken was the *L. usitatissimum*, and here he would particularly direct their attention to the circumstance, that some seed had been sent to the New York Exhibition from Russia, under the idea that it was a new variety, particularly suitable to countries where the winter is long and the time for sowing circumscribed. The person who sent it was in error in this respect, because the common flax was really a winter plant changed to a spring plant by cultivation. All winter plants would grow if sown in the spring; but plants usually sown in the spring would not always, therefore, become winter plants. The common flax plant stood English winters well, and though he spoke with some hesitation on this subject, he believed it might be readily acclimatized in Canada, by sowing it one year a month earlier than usual; the next year again one month earlier. The third year it might probably endure the winter. The spring variety of flax was altogether a different plant. Instead of being three feet high, with a close top and seed boles remaining to the spring, the spring variety was but two feet high, throwing out branches a few inches above the ground, and with seed boles that burst as soon as they were perfected, and scattered their seeds on the ground. This plant was called *humile* and *crepitans*—the first word signified that it was low; the other that the seed vessels burst. Flax had always been of great importance in history. In the book of Exodus it was mentioned as one of the crops selected by the Almighty for destruction as a punishment upon the Egyptians. In Joshua it was said that Rahab used it to hide the spies; the flax being doubtless placed on the top of the house to dry. In the New Testament, also, frequent mention of flax occurred. Some of the Roman historians, as Columella, had also written of flax, and that author's opinion was unfortunately common in the present day, that flax was an exhausting crop. He therefore says, "let no man grow flax unless he can either get a large crop or a high price." Palladius and Virgil followed him. The latter,—ever to be held in veneration by the agriculturist,—classed flax with poppies and oats, which he said burn the soil.

"Urit enim lini campum seges urit que avenæ."

Pliny went farther. He spoke of spring and winter flax and tells us the way the Romans cultivated and used it. Though two thousand years had passed, it was doubtful whether better processes were in use at present. Here said the professor was some flax that Pliny would have blushed to look at. That author took a very philosophical view of this matter, and asked what greater miracle there could be than a plant which made Egypt approach to Italy, and that there should grow in so short a plant, that which carried as it were the *Globe* itself. In that passage he of course alluded to the use of flax for ropes and sails. Pliny also gave an account of Spanish flax, which he said was better than the kinds grown in other parts of the Roman possessions; but said that in Campania there was a kind at once so strong and so fine that it was used to trap animals, so that wild boars could not break through it though nets with the ropes at top could be drawn through a finger ring, and one man could carry the nets to enclose a whole hunting ground. He also stated, that, when spun one hundred and fifty threads went to a single strand. In another place he described a breast plate brought to Rome from the tomb of Amasis, in which there were three hundred and sixty threads to each strand. If a portion of this only were believed, and Pliny was an author, who might usually be relied on, it would prove great superiority to our present method of spinning. From the fall of the Roman Empire, little was heard of flax for some centuries. In the 12th century it was largely cultivated in England; in the 16th century, it was found so important to encourage its cultivation, that an act was passed, by which every person, who had sixty acres in tillage, was required to have one rood every year in flax. In 1862, under Elizabeth, the quantity was increased to one acre in every sixty. In 1691, under William and Mary, encouragement was tried instead of coercion, and all rates, taxes, and tythes on land in flax was reduced to 4s. an acre. In 1713, under Anne, a direct bounty was given on the growth of flax, and in 1806, under Geo. 4th, a bounty was offered for its importation from the North American Colonies. These things showed that flax had always been considered an article of great importance. But, two great impediments had existed to its cultivation—first, the belief that it was an exhausting crop, and next the difficulty of finding a market. As to the first point he could shortly satisfy them; the second must be left for the description of the improved process of manufacture. Flax had but two sources from where to obtain food—the atmosphere and the soil; from the atmosphere it obtained nothing but inorganic matter, from the soil it obtained organic matter, and the exhausting power of a plant depended on the quantity of inorganic matter contained in its substance. A knowledge of this was obtained by burning the plant, and the ash which remained behind was that part which must come from the soil. Then ascertaining by qualitative analysis, the different articles of which that was composed, the ingredients taken from the soil were discovered, and might be compared with those taken by other crops. Now in Ireland there was a society for the improvement of the cultivation of flax, composed of men of the highest standing, and sufficiently interested to be led to scrutinize with accuracy, everything belonging to the subject. Dr. Hodges, their chemist, had undertaken this investigation, and had found that in one hundred parts there were but one and three quarter parts of inorganic matter. He then experimented on two tons of straw, and found that they contained but 68lbs of inorganic matter. Now, turning to wheat, one was actually terrified with the difference. Out of two tons of straw, which would produce five quarters of wheat, there were 365lbs of inorganic matter. That was to say, that an acres of wheat would take from the soil as much as eight acres of flax. Flax was, therefore, a sparingly exhausting crop. As to soils, it might be expected from its universal distribution to grow anywhere, and such was the case; however, there were certain conditions always required. The soil must be a certain depth, and free from too much water; susceptible of fine tilth on the surface; in tolerably good condition and free from weeds.—Another agricultural question had reference to rotations of crops. This would depend in all cases upon a variety of circumstances of soils, markets, climate, condition, weather, &c., of which a good farmer alone could judge for himself. In general flax is not thought a good crop oftener than once in five or six years, and many persons think not so frequently. In the old country experience had aught that flax grew better after straw and worse after root crops, especially if these had been treated with large quantities of organic manure, which was probably owing to the stubble being ploughed in and so keeping the soil open. After root crops highly manured, the flax grew rankly, was beaten down by rain, and once down never got up again. In sowing the land should be in good tilth and a roller run over it; the seed should then be distributed broad cast, or by a machine called a broad cast barrow. He sowed two bushels to the acre, because it is desirable to have the flax grow straight up with a long stem, the branches close together at the top. It should then be harrowed in with very light harrows, and the roller put over it again, in such a manner that when the seed germinated it might all come up evenly and at the same time. When once up all that had to be done is to keep it clear of weeds. This in Belgium was very expensive; but in England, so much attention was not paid to it. The land was there kept pretty clean, and the flax went on very well till it was harvested by pulling in July. This was done by pulling it, after which it was laid across and then stooked. The expense of this method was an obstacle to flax cultivation, and in the absence of a better machine to represent this labour, he recommended the ordinary mowing machines, cutting pretty close to the ground. There had been, however, two or three machines invented for pulling flax, of one of which by a person named Chichester, he had very great hopes. The inventor said that with this machine, one boy and a poney, he could pull eight acres a day. The flax being harvested the next thing was to take off the boles, which could be done in several ways, the most common of which was by rippling but where flax was grown to any extent in England or Belgium, they had another method by means of rollers, which allowed the straw to pass through and then crushed the boles, so as to drop the seed. This was done without injury to the fibre, which was often very much damaged by the ripple. In England it was thought that a crop ought to give thirty or forty cwt. of straw, and twelve or twenty bushels of seed to the acre. Two tons and twenty bushels was a capital crop, 1½ tons a poor crop. At this point the farmer's business ceased, for it rarely happens that it answers the farmers purpose to become a manufacturer himself. The objects of the manufacture are, first to extract the oil and make the oil cake, and the straw is then fit for the preparation of the fibre, really the valuable part of the plant. The plant consisted of the bark, inside of which was a woody portion, surrounded by the thin fibres of the flax, and the whole cemented together by an albuminous compound. The great object of the manufacture is to separate this fibrous matter from the other parts, which can be done either in a dry state, or chemically with the use of more or less moisture. The first method was simply the tearing apart of the fibre; but the other methods were either by putrefaction; the use of a solvent which dissolved the albominous matter; or by the employment of plain water, which was the most recent improvement. The mechanical method had always been thought desirable because it required little time or money, and many efforts had therefore been made to complete that process. Thus, in 1812, an Englishman named Lee, took out a patent for preparing flax, in this manner. He obtained from Parliament seven years to make out his specifications instead of six months, and the Irish Society advanced him six thousand pounds. But at the end of the seven years he was no farther advanced than at the beginning; the £6000 was spent, and the only machine ever made was now in the Linen Hall at Belfast. Many other inventors had since followed, but with no better success. Still there were times, when the dry system might be used with good effect, as in the case of a very bad crop, or when nothing was wanted but rough good, or goods intended to be taned, for there was this principle that stared the manufacturer in the face. He could not by this plan get rid entirely of the albuminous matter and so long as that remained the element of fermentation and decomposition must exist, ready to be called into action, when the favorable conditions should occur. Seven or eight years ago, a Frenchman supposed he had discovered an effective plan of this kind; but after three years' trial, nothing more was heard of it. The chemical methods were, first, by steeping; 2nd, by a chemical solvent, which was that employed by M. Claussen; and the 3rd was with pure water. Steeping was carried on in two different manners. In dew rotting the flax was laid on the grass, wetted, and turned two or three times every day, till the albuminous part of the plant was decomposed. The next was the cold water steeping, in which manner the principal part of the Continental flax was prepared. The flax in this method was tied up in bundles, and laid in a pit 14 feet by 51, or sometimes in a slow river. In Belgium, the river Lisse, which was slow, and charged with a great deal of organic matter, was occupied very much by flax steepers. In Ireland, it was placed under boards, weighted to keep it down; in Belgium, it was done on a more systematic manner, and crates were used for keeping it in the water. After it had been there for two days, a scum appeared at the surface, and decomposition continued to go on, and was discharged by bubbles, which showed the process was actually at work. If this were carried too far, however, it not only destroyed the matter which it was desired to destroy, but the fibre also, and it must, therefore, be watched.—After being immersed for ten or fourteen days, or three weeks, according to the temperature, the flax was taken out of the water, and it was hung out to drain, in a place something like a tile shed. Then it was ready for scutching. This was a process occupying much time, and leading only to unsatisfactory results, an improvement was therefore brought out by a German American, named Schenck, in 1846. He fancied that as temperature had so much to do with the steep, he would begin with sufficient temperature, in which, like the brewer or distiller, he could control the fermentation to occasion required. He steeped it in a large room, where he had a certain number of vats, and used hot water, of 80° or 90°, according to the kind of flax. In this way he could command the time of the process very regularly, to some seventy-two hours for the finer, and ninety-six for the coarser kinds. This improvement was tested by the Irish Flax Society and it was found that while 112 lbs of straw, heated by the old process, gave 20 lbs of fibre; 112 lbs of straw treated by Schenck's process gave 24 lb of fibre. With inferior flax it was found that 112 lbs gave 14½ lbs by the old process and 17¾ lbs by the new, making a difference in the first case of 20 per cent and in the other of 23 per cent. In spinning it was found that while the flax made by the old plan could be spun to 60 or 70, that made by the new could be spun to 96 or 101, and the weaving was equally satisfactory, so that at Belfast they now operated by this method, on about 50,000 tons per year. After all it appeared that the use of hot water had been long known, having been used in India in very early times. Schencks process gave control over the fermentation; but not complete control, and, therefore, when Claussen brought out his plan to do away with fermentation and dissolve out the abdomen by alkali, it was hailed as a great improvement. It did as much in twelve hours as Schencks plan had formerly done in four days and the old plan in four weeks. But Claussen had really usurped, a plan long known in England and elsewhere, for the Society of Arts showed that the process had been explained before it by Lady Moria in 1775, and before that it appeared to heve been used by two Swedish chemists. The specimens shown by Claussen were identical with those deposited by Lady Moira, the latter, however, having the advantage of having stood the test of seventy years. Every possible combination of alkali and acid had in fact been tested, without much progress being made. The failure was probably owing to two facts first that alkali costs money and second that it is a difficult article to control. Its action is very direct and if it goes a little too far it injures the fibre. There was still a small manufactory in France were acid was used: it had been established by two young members of the *Ecole Polytechnique*, and the product was probably applied to some special purpose, as the method could not compete with others. Coming then to the method employed by Watt, of Glasgow, it was believed by that inventor that steam would answer the purpose of steeping as well as water or alkali, and that its use would be an advantage, inasmuch as steam could not hurt the fibre and cost little money. The whole apparatus consisted of a large steam tight chamber, in which the flax was placed, that chamber had a false bottom, and on the top was an iron tank filled with water. The chest was then filled with steam which passed through the flax, struck on the iron tank, was condensed, and thus fell back again in the shape of water, the flex was thus completely saturated, and the process was continued for something like twelve hours. The liquor was carried away below the false bottom, and used for feeding cattle. By this process then, instead of the usual nuisance of the steep pit, a substance of a very valuable character for feeding purposes was obtained. After the steeping, the flax was run through two or three pair of rollers, which split it up and improves its fibre very much, as that can be best done when it is wet; it is then carried into the dying house and dried in the usual way.—Pieces of wood turning on hinges were opened and two pounds of flax placed between each of them, these were then hung up to dry. Having steam for one purpose, Watt used it also for another, he turned it on to hot air pipes, and the heated air being admitted to the dying house, that part of the process was accomplished much quicker than before. The Flax Society experimented on this process, with ten cwts of flax, of an ordinary quality.—After being steamed for twelve hours it weighed only seven cwt. The steam had dissolved out 3 cwt of albumen, which was subsequently used for feeding. After being dried and scutched, it was found to have produced 187lbs of fine flax, and 12½ pounds of tow. The whole expense of the manufacture was £10 sterling. There was then a great saving of time and money. The wash came out much in the shape of brown stout, with a nice smell, and a sweetish taste. It had 353 grains of organic, 171 grains of inorganic matter, and of nitrogen, by which its feeding qualities were estimated, 17 grains in each gallon; being as good, at least, as the best distillers wash. This was an admirable improvement; but as there were always as good fish in the sea as had been caught out of it, no sooner had it been effected; but another Scotchman named Buchanan, ascertained that Watt was wrong in using steam; that the steam could not effect the purpose; and that it must be the condensed steam by which it was really accomplished, the condensed steam being nothing, of course, but hot water. He knew that albumen was more soluble by water at certain temperatures that at others, inasmuch as it coagulates at very high temperatures, and he therefore employed water at about 180 degrees, in the belief that he would obtain the same results as Watt. This was the basis of this plan. Then he made e a boiler to generate steam, adjoining to which was a vessel called a condenser, which must be steam tight, and a large open vat into which he put the flax. Having filled the condenser with cold water, he blew steam on from the boiler, which was condensed until the water having attained the temperature of 212, could not condense any more. The steam then pushed the water out into the vat until the flax was immersed. All this was done, with no other labour than what was required to keep the fires alight under the boiler. But if sugar is put into hot water, it will not all be dissolved, a certain portion of it would continue for some time, unless a spoon were used to move it, in which case, it would be be immediately dissolved. In order to apply this principle to the flax, Mr. Buchanan, as he could not very readily agitate the flax, determined to agitate the water, and this he did by a very simple process pumping it backwards and forwards within the vat in which the flax was placed. Here the lecturer gave an account of the manner in which this was done, by alternately filling a vessel with steam, so as to force out the water, and then creating a vacuum into which the water returned. He illustrated it by a glass retort on the table, and, without this, any mere verbal explanation would not be understood. He went on to say that with this method was combined an improvement in drying. At the base of the chimney was arranged a number of vertical tubes, near where the heated gasses ascend. On one side he had a blower and at the other a pipe, which passed the heated air to the place where the flax was laid. The blower then being set in motion, the air was driven through the porous pipes, which deprived it of all its moisture, and it was then driven below the false bottom of the heating apparatus and in three hours the flax was made as dry as that which he held in his hand. This had not yet been tried on a large scale; but he had seen it applied to tons of flax, and what was very important was the fact that it was done without labour.

Now as to the interest which the people in this Country had in all this. The flax industry in England was a very large one. She had 168,000 spindles at work. France had only 63,000; Belgium 100,000; Holland only one factory with 6000 spindles; Russia two manufactures on a large scale because imperial establishments; Austria eight with only 30,000 spindles; the Zoll Verein 80,000; Switzerland four small establishments; and the United States twelae with 50,000 spindles. In the latter country they were rapidly increasing, and the other day he had seen at Fall River one establishment fully equal to any in England except for size. But travelling through Kentucky, Illnois, Indiana, and some neighbouring States, he had ascertained that there were from 2000 to 3000 acres of flax then growing, of which very little would be utilized. Yet the United Kingdom made 20,000,000 of yards of linen every year, of which 8000,000 were sent to the American Continent. Here 39,000,000 of population consumed annually two yards each, while in Europe, so far as importations went, the people consumed 1-38th of a yard a piece. America, then, was the great market for manufactured flax, and it would be of great advantage to the people of this country if they would furnish the raw material, which existed on their soil in the greatest abundance. England wanted 100,000 tons more than she could grow; there was, therefore, a fair market. Last year, only 124,000 tons was imported into Great Britain. Yet, with all this, when in the Western States, he was asked only a very low price for the straw (10 cents ₩ ton as we understood) six tons of which would make one ton of fibre. There was thus plenty of room for profit: it would be a most lucrative business to go into, and there could be no doubt of a market. The importation to England showed that she wanted as much as would require for its growth 800,000 acres of land.

On motion of W. Workman, Esq., a vote of thanks was then given to the Lecturer, and the meeting broke up.

THE EXHIBITION AND FESTIVITIES.

After the rain, which fell like a deluge all day on Wednesday, slight hopes were entertained of so propitious a change as took place yesterday morning. At dawn of day, the blue sky betokened fair weather, and on "Father Sols" appearance on the horizon, the weather was settled. The day was as fine as could be wished for, and all were on tip-toe to visit the great show on the McTavish property. At an early hour in the morning, the band which accompanied the Troy Fire Companies to this city, marched through the principal streets, followed by a multitude of firemen and others. This was the commencement of the festivities. At the hour appointed, the gates of the Exhibition Grounds were thrown open, and a perfect rush ensued. Sherbrooke Street was completely crowded, and for hours it was almost impossible to pass the Exhibition entrance. In the course of one hour after the ticket office was opened, 10,000 tickets were disposed of, and it is estimated that from 15,000 to 20,000 persons visited the grounds during the day. On our entering the Exhibition, we found every department so full of visitors that we gave up the idea of entering into detail of the numerous articles of prominence then exhibited. The Judges will make their respective reports this morning, on the ground at ten o'clock, which we shall publish as early as possible thereafter. We were happy to observe that the majority of retail dealers, as well as many of our wholesale merchants followed the recommendation of the Local Committee of the Exhibition, and closed their places of business during the afternoon.

The Ploughing Match.—The annual ploughing match under the direction of the County of Montreal Agricultural Society, took place yesterday on the Farm of Joseph Lanouette, Esq., Lower Lachine Road.

The prize of £7 10s. from the Local Committee of the Agricultural and Industrial Excibition, to the person who should plough two ridges best, in a given time, was won by Mr. Thomas Hodges.

To the Ploughman who shall Plough two Ridges best, in a given time, £2, Thomas Hodges,
To the second £1 15s., Colin Munro.
To the third £1 10s., James Muir.
To the fourth £1 5s., Mr. Logan.

The prizes to French Canadians only, was eagerly contested by a number of competitors.

The Races.—The course was very heavy owing to the late heavy rains. Notwithstanding the following horses started:—

For the City Purse—Two Mile Heats. $100. Turf Club Weights:—

1. Lt. Neville enters br. h. Big Indian, by Boston, 5 yrs. Colors buff and black........ 2 1 2
2. Mr. Laframboise enters ch. g. Bald Hornet, aged. Blue jacket and black cap........ 1 2 1
3. Mr. Covert enters ch. m. Mary Pinder, aged. Pink and Blue..... 3 3 dis

At the start, Big Indian lead for the first quarter mile, when "Bald Hornet" made a dash and took the heat. Time, 4 m. 29 sec.

The second heat was won by "Bald Hornet," leaving "The Indian" about a length behind, "Mary Pinder" saving her distance.

The third heat was easily won by "Bald Hornet."

The next race was the Garrison Race.—Dash, Two Miles.

1. Capt. Pilkington, ch. m. La Belle Canadienne, by Cadmus, aged. weight 10 stone........ 3 0 0
2. —Mierhouse, Esq., 71st Reg. ch. g. Prairie Bird by Grey Madoc, 10 stone 4 lbs........ 1 0 0
3. Lt. Neville enters br. h. Big Indian, by Boston, 5 yrs. Colors buff & black........ 3 0 0

Festivities in the Evening.—In the evening a grand social and national re-union in honour of the visitors from Portland took place at the great hall over the Bonsecour market. This soiree was given under the direction of the Committee of the Mechanics' Institute. Several interesting addresses were delivered; a glee band was present, and when all the business purposes of the meeting were over, the quadrille band were at their station, and polkas, quadrilles, and waltzes became the order of the day. Dancing was kept up with trifling intermission till an early hour.

Firemen's Dinner.—The firemen of this city also entertained their brethern from the United States, at Mack's Hotel, last evening, under the Presidency of Mr. Bertram, the estimable chief of the department. The Company was large and the welcome hearty and everything went off with the good will and good feeling, which ought always to distinguish such occasions.

Proceedings of to-Day.—To-night the Plain and Fancy Dress Ball takes place at the City Concert Hall, where, we have no doubt, a large number of the gay and fashionable, will meet to do honor to the most successful public undertaking which has occurred here for many years.

We notice from advertisement that the Indians will play the game Lacrosse this morning at eleven o'clock on the Exhibition ground, and also that the Exhibition will be opened to the public at ten o'clock punctually.

To-night too, the Fire Brigade will have a grand Torch light procession through the City, terminating at the City grounds—immediately after which a grand display of fire-works will take place.

Checking Railway Trains.—An experiment was lately tried in England to ascertain how quick a railway train, under full headway, might be stopped. The train was allowed to attain a speed of fifty miles an hour, when three brakes were applied, the steam shut off and the engine disarranged. It came to a dead stand after running about five hundred yards. The experiment was tried to ascertain if a signal of danger could be seen in season to stop the train.

Painted Glass.—We beg to call the attention of the public to the beautiful specimens of ornamental glass, contributed by Messrs. Ramsay & McArthur, McGill Street, to the Industrial Exhibition. The furniture and imitation inlaid Mosaic table, and other articles, are beautiful works of art. We understand that, under the superintendence of Mr. Spence, an English artist, they are now prepared to execute every variety of stained and enamelled glass for church windows, steamboats, hotels, &c, &c. They are now engaged on the windows for the new Catholic Church at Monklands—we wish them every prosperity in their undertaking.

Theatre Royal.—Mr. Buckland's powerful company attracts full houses every night. Miss Robertson appears to-night in "The Loan of a Lover," and "The Middy Ashore," with songs and dances. Miss Mitchell also appears, together with Sloan, Mrs. Maeder and the rest of the company. Secure your seats early at Herbert's music store.

The 26th Regiment will troop the colors on the Champ de Mars this morning, at eleven o'clock—this ceremony will doubtless prove a source of attraction to the numbers of American and other visitors at present in the city.

Trip to the Crystal Palace.—We find that a cheap trip is advertised to New York, by way of the Montreal and New York road. There and back for $6 is certainly an inducement.

The Races.—It will be seen by the advertizement of the races, that the best race of all—the hurdle race takes place to-day.

Names.

Every body has a name; nay some of us have more of them than dollars and cents. If it were possible to compile all that belong to the (800,-000,000 millions of human beings that inhabit the earth, it would afford a complete realization of that hyperbole of John's, about the world not being large enough to contain all the required books. Eight hundred millions of names! It makes one's head reel to thing of it. An attempt to arrange and classify them would throw into the deepest shade hitherto stupendous labors of Historians, Annalists and Antiquarians. Propose the subject to such characters, and assuredly they would turn from it in despair. Nor would it be a labor of love, even to those who write with avidity about the dullest nature; but, to use one of those metaphors which they defy all attempts at greater intensity or degree it would be "as dry as ashes."

Historical names have been familiar to us from childhood. Such as "Peter the Great." "Peter the Hermit," "Charles the Chauve," "Charles the Wise," "Edward the Confessor," "William the Conqueror," &c. These surnames have been derived from circumstances connected with the respective histories of the men to whom they belong; and denote qualities they possessed, or actions they performed. In an "Ancient list of the Conquerors of England," in the appendix to Thierry's History of the Norman Conquest, are a number of names identical with those modern times; as for example, "Archer," "Arundell,' "Abel," "Bertram," "Beauchamp," "Blunt," "Barrett," "Barry," &c.

In order to facilitate the acquisition, and render more easy a recollection of the names of some of the conquerors, the Normans had recourse to a sort of alliterative rhyme like the following:—

"Qembri et Pypotte,
Freya et Foylott."

The same author gives us an old rhyme, which chronicles a portion of the history of one of his characters:—

"William de Coningsby
Came out of Britany,
With his wife Tiffany
And his maide Maufas.
And his dogge Hadigres."

It is sometimes difficult to give a true derivation for historical names, particularly where the passions and prejudices of interested writers leads them to distort the truth, in order that they may heap obliquy upon the objects of their hatred; and sometimes the agitations and commotions of society, incident to great political struggles, prevent extreme accuracy as regards particulars not of the greatest importance. Thus, there is considerable doubt as to the origin of the name given to the Protestants of France. Those curious in such matters may find some particulars concerning it in the appendix to "Browning's History of the Hugenots."

Names are frequently affected by localities: the preposition "de" in the French language will illustrate this point. The trades and vocations of men, are doubtless answerable for many of the names which abound among us such as the "Carpenters," "Smiths," "Taylors," and "Masons," in the mechanical way, and the "Bishops,' "Priests and Deacons,' in the sacerdotal line. And then the "Whites," "Greens," "Blacks," "Greys and Browns," show that the colors have had a share in designating the human hord. The "Hopes," "Joys and Loves," indicate that the passions have been at work while the "Lambs," "Hares and Foxes," clearly point to an animal origin, and, lastly, the "Angels," exhibit the appropriation of heavenly appellation.

Names have significations more frequently than the incurious imagine. Those found in the Bible are all significant of something: take for instance "Abel,—vanity, breath; vapor," "Benjamin—son of the right band," Caleb—a dog, a crow, a basket," "David—well beloved," and "Eve—living enlivening." In like manner, Indian names are expressive of natural or living objects, warlike daring, enterprize or muscular strength, &c. Such names are not unfrequently highly poetic.

Montaigne tells us about a great feast prepared by Henry, Duke of Normandy, at which there was assembled, a large concourse of nobility and gentry, when it was proposed to separate the guests, and assign them distinct tables according to their names. It was done for "sport's sake," and the table at which the Williams were seated, showed an array of "a hundred and ten Knights." Doubtless this was a favorite name, or it would not have been particularized.

From time immemorial, names have been subjected to puns, good, bad and indifferent. To some persons, punsters are the greatest bores on earth, and they would rather encounter a mad bull (with an open field and fair play) than be pestered with their offensive wit. Why is this? Who can tell? Is it because they feel themselves unable to retaliate when attacked, or because they regard such trifles with unmixed contempt? Doubtless *they* know better than any body else. A very excellent pun is given in a review of a curious work called "Heraldic Anomalies." A man named Alexander Gun, was dismissed from the "Customs at Edinburgh," and the following entry of the fact was made in the record.—"*A. Gun discharged for making a false report.*"

A writer whose name we cannot now recollect, complains of a want of taste and euphony in naming children. He thinks in cases where the family name is long, the christian name should be short, and where the family name is short, the christian name should be long; and it seems to us, that his view of the subject is not without reason. At any rate it will do no harm to recommend the matter for those who shall be parents of the next generation.

Coarse and vulgar names are an abomination. It is true that a lady laboring under one of such a kind, may be very accomplished and pretty, or a gentleman suffering in the same way, may be generous and upright, but nevertheless we are apt to associate with them ignorance and ill-breeding. "*Grubbs* and *Smuggs*," what names! It is our desire that the chief magistrate of our "Great and glorious country," may never possess either of these patronyimics—either would sink the Presidency forever.—*Albany Register*.

Combined Houses for the People.

To the Editor of the N. Y. Tribune.

Sir:—I notice with pleasure that a few moneyed men have commenced a building up-town at a cost of $40,000, containing room for eight families. It is a good undertaking. They propose either to sell or rent. The price of a house is $5,000; the rent $300. This plan will answer for those who can afford to pay $300 per year. A splendid house, a good home, for $300 per year is cheap for those who can afford to live in such a palace It will answer for merchants and clerks on high salaries, but we want another kind of house—a hotel on the same principle—but of less cost, less splendid, and not on the Fifth-avenue. We want a building that will hold 10 or 20 families, at a rent of $100 or $200 per year; $100 if possible. Then we want it so arranged that by paying $300 per year for 5 or 10 years the apartments will become *ours*. We want to own them. It can be done. If our moneyed men will build a Palace, say a block of good brick buildings, with a *Court in the centre of the block*, containing a fountain, shrubbery and walks—not a marble fountain, but a good, common-sense sort of a thing, that will be beautiful and beneficial and ornamental, have the cellars fitted up for coal and wood; with wash-rooms bathing rooms; and other necessary conveniences; suppose the block costs $100,000, and the number of buildings is 20, and number of apartments 60—this will give three families to the house. Have them 3 stories—each story for a family—or have them so arranged that each family will have one third of the whole house from cellar to attic. Well, 60=100,000 is $1,666 66; 10 ₩ cent. per year for the money, $166 66; total $1,-843 32. We will pay per year for rent, $166 66; we pay on account $133, 34; $300 per year. 133 34=1,666 66, 12½ years will *pay* for the whole, and make the tenants owners.

The above plan will give the capatalists 10 ₩ cent. for the use of his money; and at the same time do him more good; give him a greater amount of happiness than to be President of this Republic. Who will start this great ball? Of course, if any man will come forward and do this at 5 ₩ cent. so much the better, and so much the greater the honor, so much the more Christian like the act, and so much the cheaper for those who take the apartments.

W. H. R.

THE ARMY.

War Office, Sept. 2.

Since the arrival of the 76th regiment in North America fifty men have deserted.

Major-General Sir De Lacy Evans, K.B.C., has been gazetted to the Colonelcy of 21st regiment of foot, vice General Sir Frederick Adam, deceased.

It is expected that Lieut-General Lord Seaton will relieve Lieut.-General Sir Edward Blakeney in the command of the troops in Ireland in May next.

Major-General Sir John Rolt, K.C.B and K.C., has been gazetted to the Colonelcy of the 2nd regiment of foot, vice Lieutenant-General Lord Saltoun, decased.

The following infantry regiments stationed in Ireland are the first on the roster for foreign service: 89th regiment 9th, 39th, 14th, 17th, 62nd, 27th, 63rd, 90th, 1st battalion 91st, 46th, 1st battalion 12th 21st, and 33rd.

Lieutenant-General Sir Neil Douglas, K.C.B. and K.C.H., Collonel of the 78th Highlanders, died at Brussels on the 1st inst. This distinguished officer entered the army in 1861, and received a cross for the battles of the Pyrenees, Neville, Nive, and Toulouse. He was Colonel of the 81st from July, 1845, and has only of late held the Colonelcy of the 78th Highlanders.

Well Turned.—A young lady, over the signature of "Kate," sends the following spirited article to the New Orleans True Delta. We think she gives fashionable young men a well merited rebuke. Her remark "It will never do to commence the work of reform entirely on one side," is worthy of consideration. She entitles her piece—"How to educate Young America."

I read in a paper, she says, the other day; that some new ornamental branches in young ladies' education were coming out soon—"*Cook*-ology, *Spin*-ology and *Weave*-ology," All honor to the projector of so happy an improvement; but, allow me to ask, when our young Misses become such pattern housewives, in what "*circles*" they will look for suitable companions? Not in uppertendom could they be found. Just fancy one of the be-whiskered, be-scented, moustachiod, exquisites, in companionship with one of Solomon's maidens; who layeth her hand to the spindle, or plyeth the flying shuttle, or compoundeth rare cookery. What affinity would there be between them? The same that exists between a butterfly and a honey bee—one all glare and glitter and frisking movements, the other all patient industry and sobriety.

I cannot think of a more useless article, or one more out of place, in a room where work is progressing, than a fashionable young man. He knows so little about matters and things I feel in pain until he is safely lodged in the parlor, among other things more, "for ornament than for use," annuals and bijouterie.

It will never do to commence the work of reform entirely on one side. I propose three branches more be added to the list of studies, for *finishing* young gentlemen, fashionably: *Saw*-ology. *Chop*-ology and *Split*-ology and that in addition to the requisite number of "sheets, towels and napkin rings," each promising pupil be furnished with a new wood-saw and axe, well sharpened, and daily exercise with hem be practised.

It will supersede the necessity of gymnasiums.

In our onward march to perfection, and in taking up the accomplishments of our grandmothers, we earnestly b[illegible] provision be made against being cu[illegible] best society," and such would be the resul[illegible]ness the lords of creation are willing to keep pace with us. Their lily hands would scarcely, with present views, be united with those which bear marks of labour; and what a dreadful state of affairs would occur in upper *snob*-dom if one of the *first families* were to marry beneath their dignity.

Hasten then, the glorious era, when walking sticks shall be converted into hoe-handles; crochet hooks into knitting-needles and quizzing glasses and flirtations be known no more.

The New Act to Regulate Professorships in Scotland,—The new Act to regulate the admission of professors to the lay chairs in the Universities of Scotland, which attracted a good deal of attention in its progress throhgh Parliament, is now in force. From and after the passing of the Act on the 20th ult., it is declared not to be necessary for any person who shall have been or shall be elected, presented, or provided to the office of professor, regent, master, or other office in the universities or colleges in Scotland, such office not being that of principal or a chair of theology, to make and subscribe the acknowledgment or declaration mentioned in an Act passed by her Majesty Queen Anne, entitled "An Act for securing the Protestant Religion and Presbyterian Church Government." The declaration substituted is to the effect that the person will never endeavour, directly or indirectly, to teach or inculcate any oppinion opposed to the divine authority of the Holy Scriptures, or to the Westminster Confession of Faith as ratified by law in the year 1690, and that he will not exercise the functions of the office to the prejudice or subverson of the Church of Scotland as by law established, or the doctrines or privileges thereof. In case any professors, at the time of passing the Act, should be used for not having complied with the statute of Anne, it will be sufficient to plead that he is prepared to take the declaration now provided. The Lord Advocate may present a complaint for violating the declaration, and her Majesty may issue a commission.

—A subterranean powder magazine, in the neighborhood of Otschakow, in Russia, and in which 160,000 kilogrammes of powder were deposited, blew up a short time since with a terrific explosion. A soldier who was on guard was knocked to pieces, and an old man who lived in a house near the place was killed by the falling of a stone on his head. The roofs of houses and the churches in the town were seriously injured by the falling of the stones, and an immense number of windows were broken. The shock was so great that in the fortress of Kinburn, upwards of five miles from Otschakow, all the windows in the house of the commandment were broken.

Numerous invitations to the Jackson & Betts dinner have been issued; and the Committee are making extraordinary preparations to produce an entertainmant which will tell at a distance. The dinner is to be furnished, under the superintendence of the Committee, by Mr. Lamb, the Music Hall Restaurateur; and the most costly wines have been provided—luscious champaign, golden sherry, crusty port, and krouttly claret.—*Quebec Chronicle*.

TRADE AND COMMERCE.

The following Sale took place at the Stores of Messrs. LeMesurier, Routh & Co., yesterday—J. G. Shipway, Auctioneer:—

J. WHEELER,
Great St. James Street, opposite Bank of the People, and

W. H. STEVENS,
69 Commissioner Street.

September 30. 183

BY TELEGRAPH.

(Reported for the Montreal Herald.)

BY MONTREAL LINE,
Office, Great St. James Street.

Arrinal of the Steamship Washington.

New York, Sept. 29.

The Washington arrived about 3 o'clock this afternoon, with advices to the 14th instant.

The America arrived out on the 11th.

Cholera was progressing in England.

The Washington brings 242 passengers. Last evening, off Fire Island, she fell in with the ship Revenue, of Baltimore for Australia, and towed her to this port. She had been 19 days in a crippled condition.

The Clipper Ship Marco Polo had arrived at Liverpool with dates from Australia to the 10th June, and £28,000 in gold dust. The mining accounts are favorable.

Cotton dull and unchanged.

Corn firm and wanted at last quotations.

Liverpool, Sept. 13.—Sales of Cotton for three days 15,000 bales.

Breadstuffs buoyant at an advance of 1s on Flour since Friday and full 3d on Wheat.

The London Times of the 14th announces that the Emperor of Russia had rejected the Turkish modification. War was now considered inevitable.

The lost jewels of the Hungarian Crown had been found buried near Orschoba.

Previous accounts state that the English and French Consuls had left Jessy. This circumstance had created a great panic.

General Ludders was advancing with a fresh corps of Russian troops upon Moldavia

The Czar was to proceed at once to Warsaw, and was to meet the Emperor of Austria at Olmutz on the 23rd of September.

Weather in England again unfavorable for the harvest, in consequence of which Breadstuffs at Mark Lane were firmer.

Increased heaviness in the money market.

Funds and Securities felt a sudden and severe depreciation, and it was feared the Bank would raise its inteaest to 5 per cent.

Consols opened on Tuesday at 95¾ @ 96, and closed at 96 @ 96¼.

LIVERPOOL MARKETS.

From Richardson's Circular of Sept. 13th.

With the exception of last night, when we had heavy rain, the weather has been fine

Since the 9th, we have had a firmer tone in the trade, but owing to holders requiring an advance on Friday's prices, only a limited business has been done.

Supply of wheat has been moderate since this day week.

This morning we had a large attendance, and fine fresh parcels of wheat were freely taken by millers, and some lots to hold over, at an advance of 2d per 70 lbs on the prices of Friday last, and about 3d on these above quoted, but stale and inferior kinds were not easily priced at any advance.

There was also a good demand for Flour, at an advance of 9d@1s—obtained on the lowest quotations of last week.

Indian Corn, on the spot, in good demand for feeding, and such qualities held at 30s 6d@31s.

Provision Market.—(From McHenry's Circular:—Lard again advanced. Beef and Pork steady.

New York, Sept. 29.

At 10 o'clock last night, the America was not reported at Halifax.

Buffalo, Sept. 29.

The brig Northampton, with a cargo of 7,000 bushels wheat, and the schooner Pantan, laden with railroad iron, were sunk last evening during the gale, while lying at the dock in Michigan city.

NEW YORK MARKETS,

September 29.

Ashes—Pots buoyant, at $5,87. Pearls, $5,50.

Flour—Western and state opened quiet, prices favoring the buyer. On the receipt of the Washington's news, holders advanced their pretensions 18¾@25c ₩ bbl, but the transactions were light. Canadian opened firmly, with a fair business doing for the Provinces; sales 2,000 bbls at $6,68¾@6,75; sales of western canal, 10,000 bbls, closing buoyant at $6,44@6,50 for state; $6,44@6,56 for mixed to fancy Michigan and Ohio.

Wheat opened firmly. In the absence of a supply of Western Canadian sold freely; sales 39,-500 bush fair to Prime White Canadian at $1,40@$1,46. White Southern $1,40. On arrival of the Washington, the market became unsettled and holders advanced prices 3@4 cents. A sale of 3000 bush ordinary White Canadian since arrival of Steamer at $1,43.

Oats scarce and firmer; sales of State and Western at 48@49c.

Corn easier and less active; 80@81c for Western Mixed.

Pork better and demand good for Shipping.

Stock light. At the close prices tended upward; sales 650 brls at $16,12@$16,25 for Mess, $15,37 for thin Mess; $12,25@$12,75 for Rumps; $12,75@$13 for Prime.

Money in active demand at 9@10 per cent on short first class paper, and 7 per cent on call.

Sterling Exchange quiet at 9¼@9½.

NOTICE.

GRAND TRUNK RAILWAY OF CANADA.

Alteration of Trains.

TO enable the Contractors to complete the Works on the new portion of the line, (recently opened for the accommodation of the summer traffic) on and after the 10th of OCTOBER, the Down Passenger Trains will not proceed further than SHERBROOKE, and the Up Trains will stop at ISLAND POND.

The Trains, from the above date, will run as follows until further notice:

Leave Montreal for Sherbrooke at 8:30 A.M., and 3:00 P.M.
Leave Sherbrooke for Montreal at 7:00 A.M.
Leave Portland for Island Pond at 7:15 A.M.
Leave do for Gorham at 1:30 P.M.
Leave do for South Paris at 4:50 P.M.

The above Trains will stop at all intermediate stations.

Freight Trains will leave Longueuil for Portland every day at 9:00 A.M., arriving at Portland the following day at 3:00 P.M.; and will leave Portland for Longueuil every day at 7:20 A.M., arriving at Longueuil the following day at 2:00 P.M.

For the temporary accommodation of Passengers between Sherbrooke and Island Pond, a Passenger Carriage will be attached to the Freight Train, leaving Sherbrooke after the arrival of the 3:00 P.M. Train from Montreal, returning from Island Pond at 12:00 the same night.

S. P. BIDDER,
General Manager.
