GEO. W. WHITE, Adv. 75 Chateaugay, N. Y.

THE NEW YEAR.

Time is like a restless river. Bearing on its tide away Wrecks of radiant hopes that ever bloom on the youth to manhood. Bearing manhood past its prime. Changing all things, resting never. Touch, O touch us gently, Time! We who speak, and ye who ponder— We who write, and ye who read— Gilding swiftly down, may wonder If we're growing old, indeed; If the past is gone forever, If the present may not stay, Or to-morrow be the gift to-day. Of the joys we missed to-day.

One year more, of all the number Given us for earthly stay, Gone into the past, where slumber Every wasted yesterday! Up to action! Let the present Day and year, and hour of time Prove, while love and hope are pleasant, Duty only is sublime! —William Wye Smith.

Power Exporting.
Seven of the ten hydro-electric companies operating under Dominion charter, generated 191,986 horsepower during the last fiscal year, and of this amount 101,423 horsepower was exported to the United States, the rest being used in Canada. The points of export are Port Frances, Niagara Falls, Arrowstock Falls, N.B., and Vancouver. The chief operating companies are the Canadian Niagara Power Co., which sold 49,860 horsepower in the United States and against 1,832 horsepower used in Canada, and the Ontario Power Co., which exported 38,912 horsepower as against 43,503 horsepower used on this side of the line.

Tree Distribution.
The forestry branch of the Canadian Government is now distributing some 3,000,000 trees annually among the western farmers, as compared with 385,000 distributed this year by the United States forestry department. Canada has got some idea from the United States in forestry administration, but in this matter the Americans have copied Canada.

Fort Pelly To Be Preserved.
Fort Pelly, Saskatchewan, for many years headquarters of the Northwest Mounted Police, has been reserved by the Government as a historic spot, and will likely be converted into a public park. It was at Fort Pelly that the first Northwest Council met in 1875.

Making the Little Farm Pay

By G. C. BOWSFIELD

FOR quick money-making, small investment and easy work, no branch of farm industry surpasses poultry raising. No feature can fit better into a little farm program, and no line of production is safer and more profitable on a large place.

Eggs are the most inexpensive kind, but they must be kept clean. They need to be proof against drafts and storms. Clean premises also are essential in guarding against disease. Two or three acres of rape and an acre of artichokes will provide practically all the fodder required by twenty-five pigs from weaning till fattening time. If a supply of skunkmilk or whey is available it will pay to use it as a light ration of corn or peas once a day will be a help. The rape and artichokes may be depended on to bring the animals on at a fair rate of growth all summer. Liberal feeding of corn for three or four weeks before marketing will assist weight and quality of flesh. Any amateur can grow the crops named and manage a drove of pigs.

There is a distinct public demand for the meat of lightweight hogs ranging from 200 to 300 pounds. The most profitable pork is that grown in eight to ten months, or from April to December, so that there is little winter feeding, and most of the growth is obtained from field forage.

Perhaps as good a plan as any is to market twenty out of twenty-five hogs late in the fall and carry over the remaining five until they are sixteen to eighteen months old. The bacon market calls for the larger animal, and prices are apt to be higher in the late winter months of the fall. All the breeds of hogs have their advocates. For general purposes nothing is better than to use dams of Chester White, Tamworth or Duroc type, crossed with males of the Poland, China or Berkshire variety. This kind of breeding will give large litters and good sized animals.

In this country the most popular breed has been the Poland. This breed has many good characteristics. It is a rapid grower, makes good use of food supplied and can be kept ready for market at any time, either as a sucker, porker or butcher. The litters are rather small, however, and for this reason, as well as to get a more rangy animal for general purposes, farmers are disposed to cross the breeds. The selection of the male is of great importance, as he directly influences every pig one may have to fatten, and it depends on his breeding very largely whether or not the pigs can make profitable use of the food given them. As in the case of all sires, the male should be pure bred, of approved strain, both with regard to capacity to put on flesh rapidly and to influence the sow in the production of large litters.

The dam need not necessarily be pure bred, provided she is of a good type. She should be selected from a prolific mother as frequently as possible. The tests should number at least twelve, fully developed, set well apart, even in size, and the front teeth well forward on the body. The number of teeth does not indicate always the number of pigs she is likely to have. Sometimes sows with ten or eleven teeth will have large litters.

Whether on range or in pen, hogs should have a medicinal ration made up as follows: One pound of wood charcoal, sulphur, salt, baking soda and sulphide of antimony. Pulverize and mix thoroughly. Use a tablespoonful daily for each pig from weaning till the end of the year. Add a tablespoonful of bone meal for each animal and mix the whole lot with enough moistened meal or bran to make a palatable mess. Clean water and salt are essential. Dipping also is advisable, in cases of sickness keep those affected away from the sound ones and take prompt action to prevent the spread of disease.

Whitewash.

The following formula for whitewash has been recommended by the United States department of agriculture: Take half a bushel of unsalted lime, slake it with boiling water and cover during the process to keep in steam. Strain the liquid through a fine sieve or strainer and add to it a peck of salt previously dissolved in warm water, three pounds of ground rice boiled to a thin paste and stirred in well. Add a pound of Spanish whiting and one pound of clean glue previously dissolved by soaking in cold water and then hanging over a slow fire in a small pot hung in a larger one filled with water. Add five gallons of hot water to the mixture, stir well and let it stand a few days covered from dirt. It should be applied hot, for which purpose it can be kept in a kettle or a portable furnace. Coloring matter may be added as desired. Where a less durable whitewash will answer the above may be modified by leaving out the whiting and glue.

Improving O. A. C.

Excellent progress is being made with the new buildings at the Ontario Agricultural College. The building that is nearest completion, both inside and out, is the poultry building. The new field barn, which is practically ready also, is a very handsome one. It is finished outside, and the contractors are busy installing the heating apparatus. Rapid progress is being made on the new dining hall, although it will not be completed before May next. It will be one of the finest buildings of its kind in the country. The building that is attracting the attention of the students just now, however, is the college skating rink. It is a substantial one in every way, has a very large ice area, with plenty of seating accommodation, and should be a popular resort for many of the young people of the city.

POULTRY NOTES
BY C. M. BARNITZ
RIVERSIDE, PA.
CORRESPONDENCE SOLICITED

(These articles and illustrations must not be reprinted without special permission)

DRESSING AND PACKING TURKEYS.

To make that extra dollar turkey must be well finished and dressed in the best manner. The old corn fattening method and flush turkeys with milk wash, beautiful specimens of which process we present. Before killing they should be fasted a day and night, or they turn green at crop, ribs and vent. To kill they should be hung head down, with nothing for wings to strike, and arteries should be cut in

Photo by C. M. Barnitz.

A HANDSOME HEN.

back of throat and bird should hang head down until drained of blood, or discoloration ensues. While bleeding feathers pluck easy and skin is less liable to tear. Whether birds should be plucked bare or feathers should be left on neck, wings, tail and rump depends on market call.

After all stubs are removed the head, feet and shanks should be washed and cloths bound removed from throat, mouth and mouth cleft and all blood spots wiped off.

The dressed bird in the picture was given its compact shape in a shaping board.

Photo by C. M. Barnitz.

FANCY DRESSED GOBBLE.

board with weights is placed thereon, and carcass is thus pressed until cold and rigid. Fowls discolored if packed before animal heat has left body. Some pack turkeys in boxes or barrels lined with white paper, placing them back down compactly. Bruising breast and barking skin should be prevented.

One successful packer covers bottom of barrel with clean straw, covers this with white paper, then wraps each turkey with paraffin paper and thus alternates with turks back down and paper and covers top with a cushion of straw and paper.

This insures no bruising and, while it takes pains, insures gains.

DON'TS.

Don't expect ducklings to thrive on the same diet as chickens. A study of a duck's digester and habits will show that ducklings require soft feed and plenty of drinking water. Don't let the barn open for the hens to enter. A barn is primarily built for the storage of food for people and cattle and not a scratching place where hens drop dirt and lay hayworm eggs which are as deadly to the duckling as the populace against the product. Don't forget that turkeys should live mainly on protein. The run of the wheat, buckwheat and corn fields nearly always kills many promising birds. Just when mother thinks her turkey troubles are about over.

Don't expect to save money by feeding anything inferior. It is always reflected in poor hen health and less wealth.

Canada's Water Power.

Canada's water power is estimated at 15,000,000 horsepower, equal to an annual production of 36,700,000 tons of coal; only 1,016,521 horsepower has been developed.

Current Comment.

It's a wise currency bill that knows its own father—Columbian Times. Equal suffrage prevails in Mexico to a large extent. The women are not permitted to vote, and the men are afraid to—Kansas City Journal. In France there is one saloon to every eighty-two inhabitants. Nearing the point where every householder is his own bartender—New York American. In creating the reckless pessimism the American P.M. magazine is violating the juvenile privilege of playing a time honored practical joke on innocence—New York World.

AN EXPERT GEOLOGIST.

W. G. Miller, One of the Most Eminent in the Dominion.

Mrs. Willet Green Miller, Provincial Geologist of Ontario, who was recently honored by being tendered a public dinner at Toronto, which was attended by many leading men from all parts of Canada, is one of the most eminent of the practical geologists of Canada. He has been prominent in exploration work in the coal mines of the Canadian Atlantic coast, the silver mines of Ontario, and the gold mines of the British Columbia Kootenay. Mr. Miller graduated from Toronto University and accepted a position as assistant in field geology in the Canadian geological survey, and later accepted a position as lecturer in geology and petrography, at Queen's University. Later he was promoted to a professorship and, eleven years ago, was appointed provincial geologist and inspector of mines for Ontario. He had already, while at Queen's, done useful geological work for the provincial geological department of Ontario, and for the Ontario field work for the Bureau of Mines. Mr. Miller's success has been due to his efforts to make his geological investigations of practical value to prospectors and miners, holding that the geologist is merely the scientific explorer and guide for the prospector and miner. He was born in the Township of North Walsingham, County of Norfolk, and educated at Port Rowan High School, before going to Toronto University, where he took his B. A. with first class honors in natural science, and later his M. A. Subsequently he studied at the University of Chicago, Harvard and Heidelberg. Queen's University, Kingston conferred upon him the honorary degree of LL.D. He is also an F.R.S.G. and an honorary member of the Institute of Mining and Metallurgy. He was president of the Canadian Mining Institute for two years and a delegate to the International Geological Congress at Mexico. He is the author of Minerals and How They Occur, and of papers on geological and mining subjects in several periodicals and in the annual reports of the Bureau of Mines. He was appointed a governor of Kingston School of Mining the year ago—Chateaugay in Montreal Star.

Canadian Peaches.

Large consignments of Ontario peaches have again been made to the British markets this year. The favorable reception accorded to Ontario's fruit has created considerable interest among the peach-growers in the province, and the export trade bears every sign of reaching large proportions. Maturing as it does about October, the Ontario crop reaches to Great Britain in between the South African, English and French peach seasons. So far as Ontario is concerned the export trade is of an extremely important factor. In the early days, when there was only the local market to supply, the area set to peaching was small. Later, when the markets of the west were opened, the supply was found insufficient, with the result that further lands were put under crop. At one time it was commonly supposed that the lands on which peaches could be profitably raised were confined to the valley of the St. Lawrence, and bordering the lakes. When a few years ago the first shipments were made to Great Britain, the growers found they could realize far larger profits, and each successive year there has been a rush to join this profitable business. The experiments have worked, and found out that the areas which the cultivators of peaches have turned out to be satisfactory in every respect. The early prospect that the reach area will be very much widened in the future.

West's First Flax Factory.

The appalling waste of valuable flax each year is emphasized in the statement that, in 1913, the flax fields of the West have produced over two million tons of flax straw, representing four hundred thousand tons of fibre, and that all of this wealth of raw material now in ashes and scattered to the four corners of those broad western plains.

There is, however, one little spot on the plains where flax straw is not regarded as rubbish, to be burned and got rid of as soon as the harvest is over. Away southwest of Saskatoon, on the Gooch Lake branch of the Canadian Northern, at the bright little town of Rosewater, flax straw is being used for purposes of manufacture in the first flax factory to be established anywhere in Western Canada—Norman Lambert in industrial Canada.

The Freshman's Error.

Alexander Grant Brown, B.A., M.A. (Oxon), is a lecturer in Ancient and Modern History in University College, Toronto. He is a department of the University Building known as the Historical Seminary, where matters historical hold sway. Here, Mr. Brown had an amusing experience one day. He was walking down the hall, being due at a lecture, when he was accosted by a freshman, thus: "I say, old fellow, can you tell me where the historical seminary is?" Some old tomlinson is going to lecture to us." Operative a door, Mr. Brown remarked. "Why, yes, I am the lecturer, just walk in."

Biggest In the World.

The dry dock which is to be built at Quebec for the Dominion Government by a Montreal firm will, when completed, be the largest structure of its kind in the world. It is to be 1,150 feet long and 137 feet wide, and will hold 10,000 tons.

Hat Spoiled Eyes.

Women should beware of the hat which shades the eyes. "He who shields his eyes from the sun weakens the vision of the wearer weakens the eyes," said a doctor recently.

"A girl of eighteen who wears the 'beehive' or other overhanging hat will find that by the time she is twenty her sight is almost as weak as that of an old woman."

Another doctor, when shown two models of the beehive hats now

are so popular among women nowadays, said that the beehive hat only weakens the sight, but also induces blindness through being worn so close to the scalp.

Rules For Girls.

Look your best by all means, but be your best also. A healthy girlhood is the best foundation for a happy life.

Know about cooking, housekeeping and domestic economy. Remember that a good daughter makes a good wife.

Accept only the best men as your husbands, paying as much attention to their character as to their personal appearance.

AN INDIAN POTLATCH.

Here is a Meal For a Dyspeptic to Reveal It!

A heroic meal is described in a recent article by Bonnycastle Dale in Toronto Saturday Night, describing a visit to the West Coast Indians, which is almost calculated to cause symptoms of indigestion in a squeamish white man.

In pots and pans, in troughs and food trays, "seal" dishes and "season" dishes, were heaped up the following:

Men-sen. Dried whale meat. Nexas. Wild geese and ducks. Me-mec. Salmon, dried and smoked, shredded and in chunks. Es-net-sen. Flounders, also dried and smoked, some boiled too. Quo-pus. Eels, these looked like bundles of bits of rope, but were rich. Sis-to-la. Coon. This poor chap had been roasted in the hot sand, I think, with his overcoat on, yet he appeared presentable.

To wash this salt and smoke feast down was a quantity of whale oil, that neither Fritz nor I could stand to leeward of it. Now civilization poked her hand in here and made things grotesque. Behold this dusky throng squatted on the platforms of the house, the glaring fire in the center lighting up the scene, each man and woman and child helping them selves from the bigger food dishes (some of these were very carved), or from their own wooden dish, which being the odds-on-favorite for eating with. The edifying smoke, the penetrating smell of the rancid oil, the low "clucking" of the native tongue, the flashing, big brown eyes of the children, the yelp of a mongrel, feast attracted and foot ejected, the slight quaking of the wind in the benches overhead, the sobbing moan of the surf upon the beach, all was in keeping with the time and the place.

That is that—"My creole Sue, I do love you," ground out by a gramophone. The relief to the strange scene, the grotesqueness of the music box in that spot, affected both the lad and me alike, and we laughed loud and long. Instantly we were much ashamed of ourselves. The hosts never as much as raised a glance towards us to note our merriment. These people are the acme of the ingenuity of the human race. They thought that all abdomens must be stretched like the drumskins we saw in a corner. Never have I seen so few people eat so much food. There was not more than one hundred people in the big potlatch house, yet the innumerable food trays were fast being emptied.

Gout Farming In Alberta.

Farmers in Central Alberta have imported more than 1,500 two-year Angora goats since last July, and it is predicted that fully 10,000 will be brought into the Edmonton district and other parts of the province during the next twelve months. There is every promise that the breeding of these animals for mohair, milk and goat venison will be developed into an important industry. While the climatic conditions of the country further south permit the Angora goat to grow hair for only one year before shedding, the cool atmosphere of Alberta enables the animal to carry its two years' growth without any fear of shedding. The hair grown from year to year is worth only 35 cents to 50 cents a pound. The two-year product is worth upward of \$6 a pound.

The value of goat meat is said to be equal to that of mutton, and is used to a large extent throughout the country, here the raising industry is extensively followed. In taste it is much similar to venison.

Wheat In New Quebec?

Extraordinary developments in wheat-growing have been proved possible in various parts of the Canadian Dominion, and just now speculation is rife among the farmers of Quebec as to the chances of growing wheat in the direction held out by the vast territory lately added to the Province of Quebec. No definite opinion is pronounced at present as to the total growing capacity of these millions and millions of acres of unsettled land, since only a small part of the territory has yet been carefully explored. But so far as climate is concerned there is said to be no reason why wheat should not be grown in the northernmost limits. Recent experiments have shown that excellent root crops can be grown in some parts of Canada actually within the Arctic Circle, and surprising results in respect to the cultivation of wheat are constantly being reported.

Brown Tail Moth.

The Department of Agriculture at Ottawa is co-operating with the Province of Nova Scotia and New Brunswick this winter, in carrying on a vigorous war against the brown tail moth, which has invaded that part of Canada.

Gangs of men are employed to search for the nests of the moth on the trees of orchards and elsewhere, and the nests are destroyed.

Millions of dollars have been spent in fighting the pest in New England, but it is hoped to prevent it getting a strong foothold in this country.

Eskimos Have Backbone.

Charles Dawson, who found the famous Blinndon skull, has made another discovery of considerable interest to anthropologists. He has discovered that the members of a certain Eskimo tribe in northern Canada have literally more backbone than the rest of humanity; that is to say, they have an extra vertebra to which small ribs are attached.

Gangs of men are employed to search for the nests of the moth on the trees of orchards and elsewhere, and the nests are destroyed.

DIED

At St. Stanislas, on March 4th, Rosa Goudrey, son of William Goudrey, aged 12 years. Funeral from his late residence to Huntingdon cemetery, at 1 o'clock on Monday, on Friday, 6th. Service in St. Andrew's church at 2:30 p.m.

At her late residence, Hinchinbrook, Margaret Bryson, wife of the late John McHardy, aged 92 years and 2 months.

At Sherrington, on Sunday, March 1st, John Seller, in his 80th year, at Montreal, on the 28th Feb., Mary, daughter of Leon Rolland, shoemaker. Interment at H. untingdon.

At New Hamburg, Ont., on Feb. 28, after a short illness, James A. Vance, in his 51st year, steel bridge contractor, and brother-in-law of James B. Cooper, of Huntingdon Q.

CAZAVILLE

This community was shocked to learn of the death of Dr. James Orr Stewart, which took place at his residence 2471 Hutchinson-st., Montreal, on Sunday, February 22, after 14 months' illness, which he bore up under with the greatest of Christian patience and fortitude. Dr. Stewart was born in the parish of St. Anicet, on the 15th of November, 1855, the third son of the late James Stewart and Mary Harvey. He received his early education at the Huntingdon Academy and graduated in medicine from McGill University in 1880. Returning to his native home he took up his profession and practised medicine with more than ordinary success for 32 years. He was a life-long member of LaGuere Presbyterian church, of which he was an elder for many years, and in which he took the foremost part in its support; he also took a prominent part in municipal affairs and was held in high esteem by all with whom he came in contact either professionally or in private affairs. This was noticeable from the number of friends from St. Anicet, Dundee, and Godmanchester who followed him remains to their last resting place at Mount Royal cemetery. Wishing to give his family the best possible opportunity for an education, he retired from practice in September, 1912, and moved to Montreal, after which he had only two months' good health. He is survived by his wife, Kate R. Fraser, whom he married September, 1891. He is survived by two sons, Clarence J., who is studying medicine at McGill, and Hugh F., a graduate of Montreal Business college, two daughters, Muriel Irene, aged 7, and Jean Isabel, aged 4, and two sisters, Mrs. Alfred E. Sadler of Ormstown, and Mrs. C. McFarland of 2040 Esplanade-ave, Montreal.

CARD OF THANKS

We wish to thank our friends and neighbors who so kindly assisted us in our time of bereavement in the death of our mother. Charles McHardy Mrs. Lucy McHardy

House For Sale—Situated on Chateaugay Street, Huntingdon, in good repair, water, electric light and furnace, also good stable. Apply to Miss L. Reid, Ormstown, Que. Box 76.

HOCKEY

The attraction at the rink on Friday was a game between Valleyfield Empires and Huntingdon. The weather was mild and the ice soft, which no doubt accounted for the slim attendance. It had been decided to try the six men game, play three periods, and change players as often as wished. During the first period Valleyfield scored three times, while the locals were unable to tally at all. Valleyfield had the better of the game all thru. Huntingdon took the aggressive in the second period and before it closed had overcome the lead, making the score three all; both teams were beginning to mix it. In the third period Valleyfield scored a few minutes after the face off, and followed it up with a second; Huntingdon came back and made it 5-3, but, although from then on they had the better of the play and kept the bulk of the Valleyfield team on the defensive they they were unable to even up, the game finishing 5-4 in favor of the visitors. As a whole the game was not an interesting exhibition, and was not up to the brand of hockey generally played on the Huntingdon rink.

Chalmers, Macdonald and E. Burrows Saturday, the team journeyed to St. Lambert to play their league fixture, but, on account of the mild weather and soft ice were unable to play. The game will likely go to Huntingdon by default. The Huntingdon team was Partridge, Burrows, Armstrong, Henry, M. Iar, Murray and Hunter. Loyola by defeating Victoria on the Arena Friday evening, 3-2, put that team out of the running, which practically means the M.A.A. have won the championship (the J. A. H. A. this season, they not having lost a game to date).

Province of Quebec District of Beauharnois SUPERIOR COURT No. 315 David Tait Turner, of the village of Huntingdon, District of Beauharnois, carpenter, Petitioner.

NOTICE Is hereby given, that the petitioner shall present, on the 15th day of April, 1914, at the hour of ten of the clock in the forenoon, to his Lordship Judge Mercier, in his Chambers, at the Court House, in the City of St. Lawrence de Valleyfield, a petition for authority to take possession of the property of the late Dame Wilhelmina Montgomery Walker Maxwell alias Rutherford, in her lifetime of the village of Huntingdon, wife of the said David Tait Turner. It is ordered to all persons who may pretend to have any right in the succession or having any claims against the said succession of the late Dame Wilhelmina Montgomery Walker Maxwell alias Rutherford, to bring their claims and file the same within one month from the date of the last publication of the present notice, or on the day of the presentation of the said petition on the date herein above mentioned, by command. J. A. Lapointe, Dpt. S.C. Valleyfield, 27th February, 1914. McCormick & Lebourveau, Attorneys for Petitioner.

Province of Quebec District of Beauharnois SUPERIOR COURT No. 2529 George Cowan, of the village of Huntingdon, in the County of Huntingdon, and District of Beauharnois, retired farmer, Plaintiff.

vs. Luke J. Coogan, of Springfield, in the State of Massachusetts, one of the United States of America, in his quality of guardian duly appointed by the Probate Court of the County of Hampden, in the said State of Massachusetts, of Cecelia Grace Coogan, of Holyoke, in the State of Massachusetts, widow of Arthur Coogan, the same place laborer, Mary Loretta Coogan and Stella Adelaide Coogan, both of Springfield, aforesaid, spinsters, all three minor children issue of the marriage of the said Luke J. Coogan and the late Dame Margaret C. Quinn, his wife, now deceased, and Agnes E. Quinn, formerly of the City of Denver, in the State of Colorado, one of the United States of America, spinster, but now of parts unknown. Defendants.

The defendants are ordered to appear within one month. Valleyfield, 27th February, 1914. J. A. Lapointe, Dep. P.S.C. McCormick & Lebourveau, Attorneys for Petitioner.

Donald M. Rowat, N.P. 157 St. James-st. Feb. 25, 1914. Montreal

Montreal, March 2.—It was a quiet cattle market and prices went down 25c the 100lb. Hogs shared in the general weakness and sales of selected lots were made at \$10 to \$10.15 per 100lb. weighed off cars.

HUNTINGDON

The anniversary services of the Methodist congregation were more largely attended than of late years. On Sunday the Rev. J. D. Ellis of Montreal was the preacher. He has got rid of pulpits conventionalities, speaks naturally, and gave two straight talks, that held his hearers. The supper-tables in the lecture-hall were well-filled Monday evening, despite ungenial weather. The main feature of the program was the singing of Miss Parker of Toronto, who has a fine voice, beautifully cultivated. Her low notes are especially sweet and true. All her four songs awakened admiration, but her last, with the refrain "Mourner, weep," was the best. Miss Chalmers gave a humorous reading and Mr. Smith piano solos. Rev. J. B. Maclean extended fraternal greetings from the Presbyterians and Mr. Ellis delivered a somewhat desultory address. The pastor, Rev. R. Smith, who presided, declared the services most successful.

Several council reports came to hand too late for insertion in this week's paper. The Godmanchester council took no action on the tenders for roads.

"O'Connor brothers have got the contract for 75 concrete bridges under 25 feet and about 700 culverts on the new government road between Levis and Jackmanville. The road is 93 miles long and the work is to be finished this year.

The high wind on Sunday night ripped a large part of the roofing from W. T. Leonard's factory.

Clarence J. Stewart a graduate of Huntingdon Academy, has successfully passed the sessional examinations in second year medicine at McGill.

The circuit court sat two days, mostly occupied by the suit of Jos. Desjardins against Dundee township for the loss of horse, alleged to be due to the state of the road. Judge Mercier took the case en deliber.

At the sale of lands for taxes the property belonging to the Geo. Anderson estate at Atholston was bought in by Notary Powat for the heirs. Sufficient of the Jellis property, to cover taxes due, was sold to Henry R. McCracken.

Early Saturday morning the reflection of fire was seen to the south, caused by the burning of Louis Morris' house in Chateaugay village, N.Y.

Charles M. Farlinger has disposed of the Francis Napier farm in Dundee, which he recently purchased, to George McMaster of Springfield, Mass., a son of John McMaster.—The Sun.

DAIRY CONVENTION

The 32nd Annual Convention of the Huntingdon Dairy Association will be held in the Moir Hall, Huntingdon, FRIDAY, March 13th, 1914. There will be three sessions, viz., 10 a.m., 2 p.m., and 7 p.m.

Addresses will be given by the following speakers—

Dr. E. C. HARRISON and Prof. A. J. NISS, of Macdonald College, and ROBERT BRODIE of Mo. tra.

Afternoon Session

LOUIS SIMPSON, Ottawa; Prof. H. BARTON, Macdonald College; JOHN FLETCHER of the Conservation, Ottawa, and possibly Prof. J. H. GRISDALE, Director of the Experimental Farms of Canada; also W. P. STEPHEN will read a paper on "The Successful Production of Milk for City Consumption."

Evening Session

Prof. J. A. RUDOLPH, Chief of the Dairy Division, Ottawa, will speak on "Some changes in the Dairy industry of recent years." It is expected that Dr. J. W. ROBERTSON of Ottawa, and the Hon. Provincial Treasurer, P. S. G. McKENZIE, as well as the local representatives will attend this session and deliver addresses.

The Directors expect this to be the most interesting and instructive Convention held for some years.

Farmers and Dairymen should not miss it. Ladies are cordially invited to attend.

Robert Ness, Andrew Philips, President Secy-Treas.

COME AND SEE THE NEW WALL PAPERS And Cut out Borders

Never before have we been able to show such a collection of artistic paper-hangings and decorative fabrics at such reasonable prices. We would be glad to suggest original treatments, and quote prices for the entire work of decorating.

A GOOD APPEARANCE

is just as necessary for your house as for yourself. A shabby, unpainted house creates a bad impression. New paint increases the value of your property and protects it from the elements. DO IT NOW.
