**WEIGHTS, MEASURES, INTEREST, &c.**

Previous to 1828, there were used in Great Britain as legal standards, the Ale Gallon, Wine Gallon and Corn Gallon, of all different capacities; also the Winchester Bushel for dry measures, besides Heaped Measures; all of these are now abolished, and but one standard Bushel and Gallon for all measures, both dry and liquid, is used, called the Imperial Bushel, one-eighth of which is the Imperial Gallon.

# Milk of Magnesia

MOST CERTAINLY CURES

Dyspepsia, Indigestion,  
Heartburn, Nausea,  
Sour-Stomach and Headache.

Can be had at all Chemists.

The change from the old wine to the Imperial is not compulsory till 1880, up to that time the old wine gallon may be used by those who desire to do so, upon the condition that all bargains effected by it shall be specially mentioned.

The Imperial bushel is an upright cylinder, whose internal diameter is 18,789 inches and depth 8 inches. The Imperial gallon is one-eighth of this, and cubical contents equal to 10 lbs. water. We may quote from this, as Imperial measure, "a pint of water a pound and a quarter;" and from the weight of water given below corresponding to the different measures, it follows, that if measures were lost, we could find their equivalents by weight of water, and if weights were lost, we could find their equivalents by cubical contents of water.

The standard of the United States consists of two measures, namely the Winchester Bushel for dry measure, and the old English Wine Gallon for liquid measure. The Winchester Bushel, so called because the standard measure was formerly kept at Winchester, England, is an upright cylinder, whose internal diameter is 12½ inches, and its contents equal to 2150 2-5 cubic inches and equal to 77,627 lbs. of pure or distilled water at a temperature of 62 and barometer at 30.

The proportion between the Imperial measure and that of the United States is very simple and convenient for reduction, being nearly 5 to 6. Thus 5 Imperial gallons are equal to 6 gallons United States standard. The Imperial bushel is about 1.32 part more than the Winchester, 31 bushel Imperial being equal to 32 Winchester.

There are still used in the United States, the old beer or ale gallon of 282 cubic inches, equal to 10. 18 lbs. of water and a New York State bushel of 2211-84 cubic inches, and gallon of 221-184 cubic inches, or 8 lbs. water. All transactions involving the measuring or purchasing of liquids, &c., should state the measures understood. By an act of a Canadian Parliament, the following are the legal weights per bushel of the different kinds of grain; but when bought or sold by weight shall be specified by the cental (100 lbs.) and parts of a cental.

The new Copper Coinage of Great Britain, 1860, is composed of 95 parts Copper, 4 of Tin and 1 of Zinc. A pound of this is coined into 48 pence of 80 half-pence or 160 farthings, and the half-penny measures one inch in diameter. The Canadian Cent is the same diameter, and 100 of them weigh one pound.

In the absence of Apothecaries weights and measures, the following items are worth remembering:

About 25 drops of any tin liquid will fill a common sized teaspoon,—three table spoons will fill an ordinary sized wine glass,—four wine glasses will fill a common sized tumbler.

### Interest.

General rule for calculating interest for days. Multiply 1 year's interest on the amount by the number of days, and divide the result by 365.

SPECIAL RULE FOR 7 PER CENT.—Multiply the amount, days, and the decimal 0.19178 together; the result will be the answers in cents;

or multiply the principal, days and 19178 together, and from the result cut off 6 figures from the right, the remainder is cents for the answer; if there be cents to multiply in the principal, cut off 8 figures.

*To convert Sterling into Currency.*—To the given sum, add one-fifth of itself and one-twelfth of that one-fifth.

*Currency into Sterling.*—Multiply by 60 and divide by 73.

### Exchange Calculations.

In the absence of tables, the following calculations will be found useful; and as there are various modes of calculating Exchange, we choose the following as being the most easily understood. As before stated, such are made upon the old base or par, rendering it necessary to convert all sums to that standard, to enable us to find the required result. Four shillings and six pence sterling and one dollar at old par are equivalents; and as that relative value has been altered, but still retained as a base of calculation, it follows that 9.9½ or 10 cent, premium quoted, means 9.9½ or 10 cents on the dollar, or dollars, on the hundred, or pounds, &c., in addition to the old par value; and as in these calculations we shall use the dollar as basis, quotations as above will read as \$1.09, \$1.095, or \$1.09½ and \$1.10; and the sums are to be multiplied or divided by the required premiums, written in a similar manner.

*Sterling into Dollars and Cents.*—At any premium. Multiply the pounds by 40, and divide by 9; this result gives the sum in dollars at old par; then multiply this result by the quoted premium, expressed as before stated.

*Example.*—What must I pay for a Bill of Exchange for £300 sterling, the quoted rate being 8 per cent, or \$1.08?

*Solution.*—£300 multiplied by 40 and divided by 9, gives £1,333.33 at old par; then 8 per cent, added to this, or multiplied by \$1.08 gives the answer, \$1,440.00.

*Dollars and Cents into Sterling.*—At any premium; (this operation is the reverse of the preceding). Multiply the dollars by 9, and divide by 40; this sum will be dollars into sterling at old par, which divided by the quoted premium, gives the required result.

*Example.*—What amount of Exchange on London can I buy for \$1,440.00, the quoted rate being 8 per cent, or \$1.08?

*Solution.*—\$1440, multiplied by 9, and divided by 40, produce pounds at old par, this sum, being divided by \$1.08, gives the answer, £300 sterling. *Note.*—When shillings and pence are in the sterling amounts to be operated on, it will be necessary to reduce them to the decimals of pound. A very little practice will soon familiarize one to the easiest method; say for 17 shillings and six pence, then 10 is £5, then say 5s. half of that or £125; these added, give £875, the required decimal. Bank Exchange here with Paris assumes a par of 25 francs to £1. sterling governed by quotations of sterling Exchange, with ½ per cent additional for difference between Paris and London; thus, if sterling Exchange be 10½ our Bill must be based on 11.

*Question.*—I have a Bill from Paris to pay, amounting to 216.05, sterling Exchange being 10½ per cent; what must I pay here in dollars and cents?

*Solution.*—216.05 francs divided by 25 produce £8. 12s. 10d. sterling and this amount into dollars and cents at 11 per cent, (½ par more than the quoted rate), produces \$42.63, which I have to pay, to settle my account with Paris.
