

The Fisheries Fete in London.
A VILLAGE BURNED BY ITS INHABITANTS.

Disastrous Storm—Strike Ended—A Mania's Suicide—The Telegraphers—Fear of Cholera, etc.

"Canada Gazette" Announcements

LONDON, July 21.—Over fifteen thousand people assembled at the fete of the fisheries to behold the royal and titled ladies in fancy costumes and dispensing American drinks with their fair hands to all comers. The fete being the gold from the pockets of the public and society generally to aid the Crown Prince of Germany to found an English club at Berlin. The Princess of Wales was seen in a flower at a guinea a bunch, the Duchess of Connaught and Princess Christian took charge of the light refreshments, the Duchess of Devonshire, the Princess of Wales, the Duchess of Albany, the Princess of Teck and the Marchioness Teag, the wife of the famous Chinese Ambassador, presided over a gaily illuminated Chinese tea-house. There was a decided row on the cup that cheers but not inebriates, the royal ladies and the Marchioness selling with their own hands over three thousand cups. Several fans specially made for the occasion by the Marquis Teag were sold at fabulous prices, and tea packets embossed by the olive fingers of the Marquis of Teag's two young daughters were also in great demand. The Countess Dufferin presided over a fish pond where the Prince of Wales fished and made several lucky catches. The fete was given in two canals, a pleasure, a pleasing scene being offered by the Royal Criterion Company. Miss Ada Cavendish was enthusiastically applauded for her delivery of the "Charge of the Light Brigade." The fete was a success, the London season, did not end till the Chinese lanterns and electric lights were put to shame by the rays of the rising sun.

A village in Styria was recently burned while the inhabitants were absent from their homes to give welcome to the Emperor of Austria. It has been discovered that the incendiaries set the village on fire. Five incendiaries have been arrested.

AMERICAN.
DUNSMUIR, July 21.—By the storm yesterday thousands of acres of grain are beaten flat.

ST. FRANCISCO, July 21.—The strike of railroaders on the extension of the Oregon branch of the Central Pacific has ceased, and the whole force of 4,000 men have returned to work.

ROCHESTER, Minn., July 21.—Chas. Fisher, a patient at the Second Hospital for the Insane, made his escape from his cell, and after a fierce struggle in the boiler room and after getting inside stood with his back to the red-hot brick wall until he fell insensible.

PHILADELPHIA, July 21.—The American Gazette of the B. and O. Telegraph Company says the relations between the company and the telegraphers have been opened with the telegraph strikers' committee in the city.

CHICAGO, July 21.—The Assistant Superintendent of the Baltimore and Ohio telegraphers at a compromise have been opened with the telegraph strikers' committee in the city.

NEW YORK, July 21.—The World's Washington special says the fear of cholera in London is making our Government alert. A quarantine is being established, and a number of thousands of men are now striking.

SENIOR KIRMAN took out his exalted authority for the belief that Gould favored making some concession to the telegraphers and would do so when the Committee on Grievances report. The Board of Trade is discussing the telegraphers' strike, and a compromise telegraph companies to resume their work. The difficulty is that as long as the companies continue to receive messages and transmit them, there will be no strike. It would be difficult. It is rumored the wire west of Pittsburgh, at Ashbury Park, Brooklyn and here, has been cut.

ST. LOUIS, July 21.—The telegraph strikers' committee in the city.

OTTAWA, July 21.—A proclamation has been issued establishing a quarantine on vessels from Mediterranean ports. The rules respecting the examination of masters and mates under the law passed last session have been approved by an order-in-council.

The Great Railway Strike, Co. gives notice of a special meeting of the shareholders of the Montreal and St. Lawrence Railway to consider the question of amalgamating with the Montreal and St. Lawrence Railway. A meeting of the shareholders of the Montreal and St. Lawrence Railway has been called for the purpose of amending the constitution of the company.

SACRAMENTO, N.Y., July 21.—According to present indications the crop in Kings County this year will be a comparative failure. There will probably be a fair yield of some earlier crops, but the wheat and corn appear to be well, but they seem to be on the ground; in some orchards the ground is literally covered with blasted fruit.

Sea-Bathing.
At the present time when the sea-bathing season is about to open, it is not surprising to recall the chief general indications and contra-indications which respectively sanction and forbid bathing in the sea. "Bath I believe." This is a question which thousands of health-seekers will be asking of their doctors during the next few weeks. While the stimulus of a fresh sea-breeze, the coolness of new occupations, together with rest and the customed work are the elements from which bathing in the open sea is in itself a powerful restorative agent, and a very great advantage. The universal experience of our race, through unnumbered ages, has shown the value of sea-bathing as both a preventive and a curative medicine. A good rule, laid down by the experienced physician is this: In all cases showing impaired functional activity, and in cases of nervous debility, without any manifestation of inflammatory symptoms, and in short, in those cases in which the exhibition of restorative and tonic is indicated—sea-bathing may, with proper precautions, be resorted to; it is contra-indicated in persons of plethoric habits of body, in cerebral congestion, in organic disease of the heart, in rheumatism, and in all persons who have not the ability safely to encounter a comparatively severe shock; while it is also to be forbidden at certain periods in which the female constitution is not prepared for the application of powerful remedies. Because it tends, in certain conditions of impaired health, to cause determination of blood to the viscera, bathing in the open sea is generally unsuitable for persons disposed to congestive disorders of the lungs, kidneys, liver, and brain. Albuminuria, advanced anemia, and a liability of hemorrhages are also conditions which are usually accepted as contra-indications to sea-bathing. It is harmful to bathe in the sea; children under two years of age are too young to bear with advantage the comparatively severe shock of a cold sea-bath. In old age, when the bodily powers are unequal to a vigorous reaction, sea-bathing may do much harm, especially in the subjects of extreme arterial degeneration. In suitable cases, and under proper precautions as to time of bathing and duration of exposure, a daily bath in the open sea is a valuable restorative. In individuals who are fairly robust, it is a stimulant and tonic, promoting appetite, tissue-change, and excretion, and tracing up the nervous, vascular, and muscular systems. Sea-bathing is especially useful as a powerful and unsurpassed tonic in delayed convalescence from acute disease, in persons with chronic affections, and in persons whose strength has become enfeebled by injurious exposures, by mental strain, or by unhealthy occupations.—British Medical Journal.

Special from Ottawa.
OTTAWA, July 22.—Gen. Lauder has returned to this city.

The situation today in reference to the telegraph strike has continued to improve as the result of the position of the telegraphers. The force collected by the G. N. W. Co. is now sufficient to perform the work in a satisfactory manner. The telegraphers are now in a position to perform the work in a satisfactory manner.

The telegraphers are now in a position to perform the work in a satisfactory manner. The telegraphers are now in a position to perform the work in a satisfactory manner.

TO-DAY'S SHOOTING.
11 o'clock.—The Americans are proceeding to the firing point. It is still raining heavily, but the sun is trying to struggle through the clouds. There are very few spectators.

10.30.—Raining hard; a strong wind is blowing from the north.
11.22.—The gun has been fired, and the competitors have just begun to blow off.

11.40.—It is again raining; light very much; the wind is moderate and blowing from the north.

1.30 p.m.—The attendance is much larger. Visitors are arriving rapidly. There is every prospect of a large gathering. The shooting is now in progress. The Americans are doing well.

2 p.m.—The firing at the 600 yards range is now going on. Pearce, of the British, and Low, of the Americans, are the only competitors left. The British are doing well.

2.30 p.m.—The shooting at 900 yards has been completed. The result is a substantial gain for the British, who scored 297 against 263 for the Americans. Aggregate at the end of the 900 yards shooting: British, 1,697; Americans, 1,687. The following is the score at 900 yards:—
