

The diagram illustrates a PUISARD, a type of water trap. It shows a cross-section of a wall with a drain opening. Water flows from the drain into a U-shaped trap. The trap is designed to catch debris and prevent it from entering the main drainage system. The water level in the trap is indicated by a line labeled 'niveau'. The trap is connected to a main drainage pipe on the left, which is labeled 'égout'. The water flows out of the trap into a collection point labeled 'PUISARD'.
