THE INVENTION OF TELEPORTATION AND TIME TRAVEL

Including 2 new laws of physics

We have seen in the theory of constant relativity, that the higher the speed of movement between two points of the time line that the more our perception will become zero. There is a gap between the two dimensions of space-time and that clues have been left in the other dimension as we cross space-time.

<http://www.janelle.international/constant.pdf>

We have seen in the theory of the relativity of space-time, that clues that are in the other dimension can be captured by camera, video, audio and satellite. A development of 3 new laws of physics has been made that allows to cross space-time at two precise frequencies but without having proof for the frequency of 400hz. The multiplier index of the speed of movement in this other dimension was defined at 34X our current travel speed in our dimension but without knowing if this index is really accurate.

<http://www.janelle.international/space-time.pdf>

We have seen in the document of the diagram - teleportation, the design plans of the two doors of space-time that allow to cross from one dimension to another according to the two very specific frequencies and with the application of the magnetism of the rotation of the engine and the resonance of Schumann. We have implemented that these two frequencies in an engine is visualized in RPM.

<http://www.janelle.international/diagram.pdf>

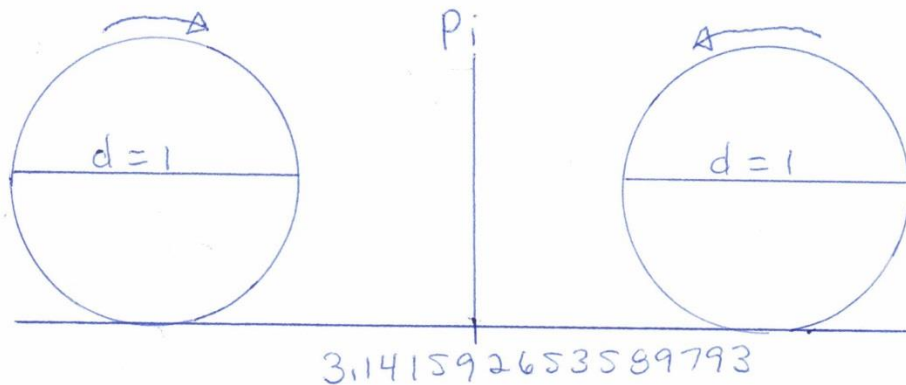

We have seen in the document of the journey through time, that in this other dimension, that it is possible to travel in the past and in the future. We had a demonstration by the test of the bottle, that moving object in our dimension via the second dimension, was possible. We also saw that it was possible to come back and put clues in time and be captured on camera in this other dimension in application to time travel. We saw the application on earth of the multiplier index of the speed of movement to 34X with teleportation via the two doors of space-time at two different locations.

<http://www.janelle.international/travel.pdf>

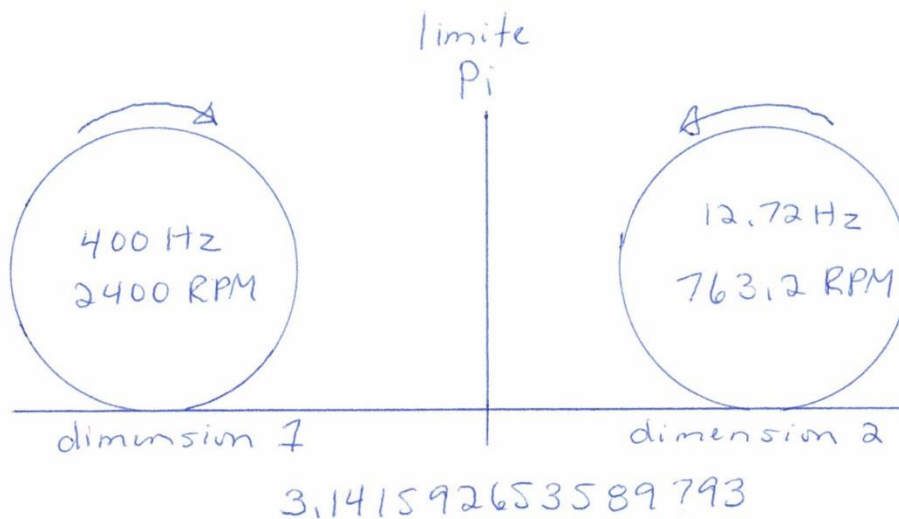

We have seen in the document of the journey into space, the journey into space is achievable in the other dimension but through two doors of space-time on earth. The speed of movement in this other dimension in space is at 34X our current speed but without yet having any formal proof that this multiplier index of the speed of movement is accurate according to the frequency of the two doors of space-time.

<http://www.janelle.international/space.pdf>

In this paper, we will demonstrate that the two frequencies of the space-time gates is actually the two good frequencies (12.72hz and 400hz) and by the same to the fact that the multiplier index of the speed of movement is beautiful and well 34X.

If you take a circle with a diameter of 1, its circumference will be of the value of Pi. It is also true to say that if I roll this circle on a line, that when the circle has made a complete turn, that it will arrive at the value of Pi.

If we take the principle of the circle and apply it in our two doors to cross space-time, we end up with two speeds of rotation in RPM very precise. There is a boundary between these two dimensions. If you take the RPM value of the 400hz door (2400 RPM) and divide by the RPM value of the door of 12.72hz (763.2 RPM), you end up with the value of Pi at 3.141592653589793. So the value of Pi is the value of the limit of the two dimensions of space-time. This now allows us to define Lortie's law with a new Pi formula.

LORTIE LAW

The limit between the two dimensions of space-time comes to the value of 3.141592653589793, or the value of Pi. This allows us to define a new Formula of Pi.

$$\text{Pi} = \frac{\text{triangle mirror speed (RPM)}}{\text{pyramid mirror speed (RPM)}} = 3,141592653589793$$

$$\text{Pi} = \frac{2400 \text{ RPM}}{763.2 \text{ RPM}} = 3,141592653589793$$

We will define the formula of the multiplier index of the speed of movement in the second dimension before continuing by the law of Ferland that follows. The exact index is 34.2X, which we had initially rounded to 34X in the theory of space-time relativity.

FERLAND LAW

The movement speed multiplier index (Vd) in the second dimension is rounded to 34X our travel speed in our dimension and defined by the following formula.

$$\text{VdX space-time} = \frac{\text{f triangle time (hz)}}{\text{f pyramid time (hz)}} = 34.2X$$

$$\text{VdX space-time} = \frac{1\ 106\ 64\ 0.739\ \text{hz}}{32\ 360.67977\ \text{hz}} = 34.2X$$

To define that we have the two right frequencies and the multiplier index of the speed of movement, 3 clues were left by a person of the other dimension in our dimension via space-time. These indices were left during the period from June to October 2020. At first glance, the 3 clues are nothing special, but they were left to us to come and validate what we needed for our results.

Avis publié le 2 septembre 2020

Au Centre d'hébergement
Frederic-George-Heriot
de Drummondville, le 24
avril 2020, est décédée à
l'âge de 84 ans, Mme

This death notice is available on the internet on June 24, 2020, but the date of the article is dated September 2, 2020. This date of September 2, 2020 was taken as an example on January 29, 2020 in the document of the time travel, even before this death notice was found on the Internet. If we come to say that September 2 is ultimately a unit of time in the second dimension (2.09 days) and that we calculate the number of days between June 24, 2020 and September 2, 2020. This number of days reaches 71 in our dimension if we take into account taking June 24, 2020 and September 2, 2020. This confirms that the multiplier index of the speed of travel is indeed 34.2X and that the two frequencies of 12.72hz and 400hz are accurate. June 24 is the date of the National Day and the date of the inauguration of the new Samuel de Champlain Bridge.

2.09 days x 34.2X = 71.48 days

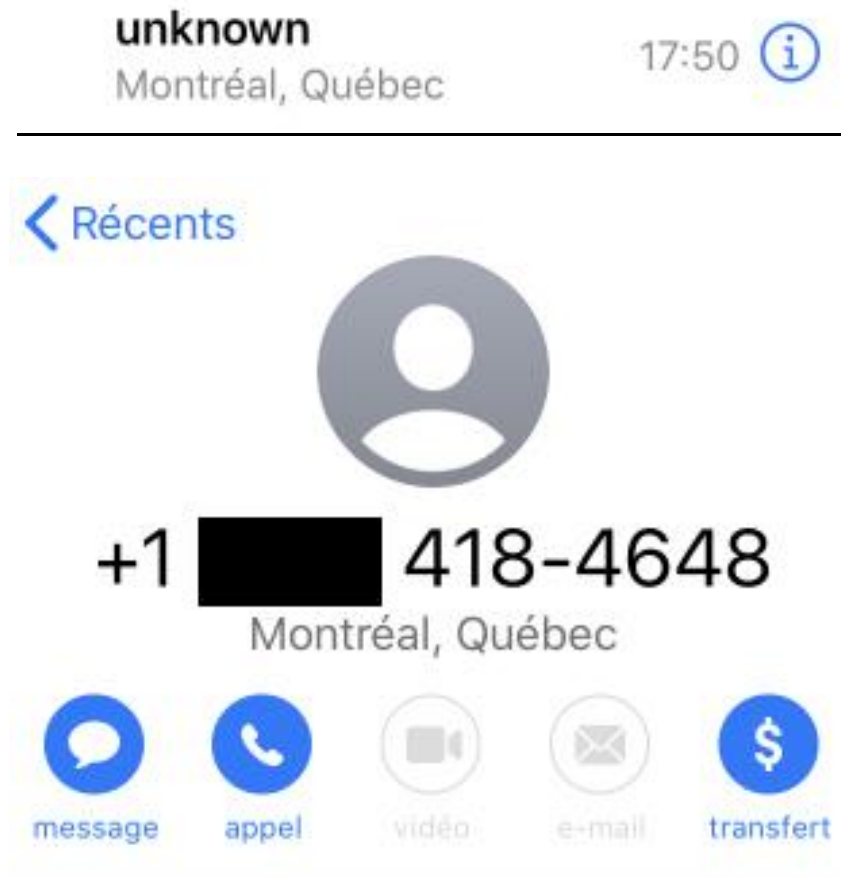

Index 2

On August 14, 2020, the oven counter began to record 8324 for less than a minute. In early August, I wondered about the validity of 400hz and I told myself that I had no proof for this frequency. The only evidence to date is that in planes and boats, the frequency of the power sector is not 60hz but 400hz for limited gravity of the design parts. I had just learned that a friend had moved to Vancouver on the same day of August 14. The air time between Montreal and Vancouver is approximately 4:36 minutes. If I take the same process as Index 1, the time between these two cities in the second dimension is 8,324 minutes. This confirms that the multiplier index of the speed of travel is indeed 34.2X and that the two frequencies of 12.72hz and 400hz are accurate.

$$8.324 \text{ minutes} \times 34.2X = 284680 \text{ minutes} / 60 \text{ minutes} = 4.744 \text{ Hours}$$

Index 3

On October 1, 2020, a call received on the cell phone at 5:50 p.m. with the mention unknown. The person at the end of the phone breathes hard but without speaking. I noticed in the evening that it was possible to call back the number. For privacy purposes we hid part of the number. 418 represents the regional code of Quebec City. The hidden number represents another city in Canada. The time between these two cities is just over 2:30. If we use the same process as the other two indices, the 4648 is the time in the second dimension to move between these two cities. 4.648 minutes is the time at 34.2X the speed of movement of that in our dimension. This confirms that the multiplier index of travel speed is 34.2X and that the two frequencies of 12.72hz and 400hz are accurate

$$4.648 \text{ minutes} \times 34.2X = 158961 \text{ minutes} / 60 \text{ minutes} = 2.649 \text{ Hours}$$

In the fall of 1996, I began my research on teleportation by the dimensions of space-time before I had even received my college degree as an electronics technician specializing in telecommunications. 24 years later, according to the results of my research, I confirm the invention of the teleportation of matter by a precise displacement of 34.2X our current speed. I also confirm the invention of time travel by applying two space-time doors at the frequency of 12.72hz and 400hz. I confirm that there is life in two distinct dimensions that gravitates the earth and space. I confirm that it is possible to go to this second dimension of space-time and return to our dimension.
