PREFACE

We are very pleased to present the brand new edition of the *Québec Environmental Industry Export Directory*. This document, which has been entirely reworked, is the ideal reference tool for anyone interested in what Québec has to offer in terms of environmental products and services for international markets.

The environment market, which is expanding worldwide, offers very interesting opportunities that Québec businesses are in a position to seize. Whether through developing niches for specific markets, establishing alliances and partnerships or using established distribution networks, Québec's environment industry is now present in many countries.

Québec's environment exporters, who are known for their expertise and vitality, are in a position to offer you quality products and services. We are proud to introduce them to you and hope that the directory will contribute to establishing and consolidating business relationships.

Gaétan Poiré, director
Direction de l'environnement et des services aux entreprises
Ministère du Développement économique, de l'Innovation et de l'Exportation

QUÉBEC'S ENVIRONMENT INDUSTRY
Innovative Solutions that Meet Your Needs

EXPORT SUPPLY

In Québec, the environment industry designs technologies, manufactures products and provides services that contribute to preventing and reducing environmental risks, minimizing air, water and soil pollution and economizing resources. It also provides solutions to problems related to waste, ecosystems and climate change.

The environment market, which is enjoying worldwide growth, offers interesting development prospects. Requests for expert advice vary according to territory and based on need and demand. Businesses in Québec have the necessary know-how and flexibility to meet their customers' needs and many are in a position to form partnerships offering turnkey products and services.

The industry's strengths are distributed among the various segments of the environmental sector. The significant number of industries in Québec involved in extracting and processing natural resources has allowed it to acquire substantial expertise in treating the resulting emissions and effluents, in particular.

Québec also has a considerable number of universities and research centres, providing access to know-how and a qualified workforce, which reflect the industry's capacity for innovation.

Consulting expertise on the environment is another of Québec's strengths recognized worldwide. In fact, Québec has a significant pool of businesses specializing in environmental engineering, in manufacturing varied systems and equipment and in designing and using air, water, soil and waste treatment processes.

The *Ministère du Développement économique, de l'Innovation et de l'Exportation* plays an active role in supporting the businesses, including their exporting efforts. That is why it designed this tool, summarizing the products and services offered by businesses on the international market, operating in the following areas: agro-environment, air, climate change, environmental assessment and management, hazardous material, soil and groundwater, waste and water.

Québec is firmly committed to sustainable development and the environment industry is an essential part of that commitment.

SECTORS AND SUB-SECTORS OF THE ENVIRONMENT INDUSTRY

Sectors	Sub-sectors	Definition
Agro-environment	Management of solid or liquid manure: processing, storage, and application	This sector includes specialized businesses and organizations offering products, services, technology and processes related to the field of solid or liquid manure management.
Air	- Odours - Noise - Air treatment – indoors - Air treatment – outdoors - Air treatment – assessment	This sector includes businesses and organizations producing goods and services for indoor and outdoor air. It also includes products and services related to odour and noise management.
Climate change	- Capturing, sequestering and recovering CO₂ - Energy efficiency - Transformation and reduction of GHGs - Services related to climate change - Measuring and controlling GHGs	This sector includes businesses and organizations producing goods and services related to the greenhouse gas issue: reduction of emissions, energy efficiency, emissions trading, etc.
Water	- Sludge (municipal, industrial and agricultural) – treatment systems and material - Wastewater – treatment systems and material - Drinking water – treatment and supply systems, and material - Consulting services – drinking water - Consulting services – wastewater	This sector includes businesses and organizations producing goods and services for collecting, supplying and distributing water meeting quality standards, for preserving groundwater and surface water, and for purifying wastewater before releasing it into the environment.
Environmental assessment and management	- Environmental assessment and auditing - Environmental management systems (e.g.: ISO 14000) - Laboratory services	This sector includes businesses and organizations producing goods and services for planning, organizing, directing, and controlling actions or action programs in terms of environmental performance.
Hazardous materials	- Hazardous liquid waste - Hazardous solid waste	This sector includes businesses and organizations producing products and services for the management of hazardous materials according to applicable regulations: transportation, storage, treatment, disposal, etc.
Waste	- Conversion, incineration and composting - Disposal - Recovery, recycling and reuse - Consulting services - Treatment systems, equipment and material	This sector includes businesses and organizations producing goods and services for waste management: reduction at source, collection, recovery, recycling, treatment, reclamation, disposal, etc.
Soil and groundwater	- Purification and treatment of soil – hydrocarbons - Purification and treatment of soil – others - Purification and treatment of groundwater - Mine tailings - Contaminated sediments	This sector includes businesses and organizations producing goods and services for preventing the alteration of groundwater and surface water quality and for treating contaminated mine tailings, sediments and soil.

Sectors	Products and services
Air Water	• Activated carbon • Environmental control equipment • Air purification systems

Description of the business

A.C. Carbone Canada Inc. is Canada's only manufacturer of activated carbon and has been in operation since 1979, when it took over operations from Barnebey-Cheney Ltd. (known today as Barnebey-Sutcliffe Corp.). Since its foundation, A.C. Carbone has accumulated extensive application experience and technical knowledge. This experience and commitment provide a solid foundation for the company's state-of-the-art products and customer relations.

A.C. Carbone Canada offers a wide range of products capable of providing solutions for virtually any water, wastewater, gas or air contamination problem. Products can be shipped quickly and economically and the company's non-hazardous carbon recycling service provides activated carbon users with restored product at an affordable price. In addition the company can also custom-tailor most spent carbons to customer requirements to produce a superior product.

Air • Air treatment – indoors Water • Wastewater – treatment systems and material	• Gas detection systems for building ventilation control • Process heating equipment for commercial and industrial applications • Automatic scraper strainer for intake, process and effluent filtration • Self-cleaning strainers for water purification • Spill detection equipment

Description of the business

Acme Engineering was founded as a manufacturer's representative firm in 1956 and began large-scale production of its own heating, ventilation and air conditioning (HVAC) equipment in 1968.

The company has since diversified its product offering into three divisions: boilers and associated heating products, gas detectors for building ventilation control, and automatic strainers for liquid filtration. Acme is also capable of integrating mechanical, electrical and electronic systems into comprehensive, turnkey packages for its clients.

Description of the business

Activa Environnement inc. is an environmental consulting firm driven by the challenge of finding suitable solutions to land users' needs. Its strong multidisciplinary and dynamic team is made up of 10 professionals in various fields, such as biology, agronomy, forestry engineering, tourism, agro-forestry, geomatics and remote satellite sensing. The team has carried out numerous projects dealing with marine, aquatic, forest, agricultural and urban environments. With the ultimate goal of ensuring the durability and quality of the environment, Activa Environnement aims to develop all resources by applying a multi-user management method. This approach creates jobs, diversifies the region's economy and promotes a global approach to managing the territory.

Description of the business

Aderco Chemical Products was founded in 1981 by its current president, Mr. Michel Bisailon.

The business manufactures chemical products used as additives for liquid fuels, especially heavy fuel oil.

Though production is concentrated in North America, the business sells its products in more than 50 countries through sales offices in Montréal, Brussels and Singapore.

Description of the business

Airscience Technologies was incorporated in 1993 and is one of the technology leaders in the field of air pollution control and treatment of industrial process gases. The Company has specialized in the treatment of gases containing sulphur, halogens and VOCs as well as odours. AirScience is also specialized in the separation and production of industrial gases using the PSA technology. AirScience Technologies has sales and customer support offices in Canada, the USA, Mexico, India and the middle East (Dubai). AirScience systems and processes are used by the chemical, petrochemical, oil & gas, cement, power generation, solid waste and waste water treatment industries.

AirScience has developed a CO₂ sequestration process producing vegetable oils suitable for the production of biodiesel. This innovative technology uses micro-algae and is particularly directed to industries located in high sun exposure areas and generating large quantities of green house gases.

International presence	Fields of application
• United States of America • Europe • Mexico • India • Middle East (Dubai)	• Cement Industry • Chemical and petrochemical industries • Environment industry • Pulp & paper industry • Oil & Gas • Manufacturing industries • Agro food industry • Municipal solid waste landfills • Waste water treatment plants

Description of the business

Since 1987, Aqua Data has specialized in the assessment of water distribution and wastewater collection systems. It documents and supports short- and long-term investment decisions for the maintenance, management and rehabilitation of municipal systems. The company excels in the implementation of proven and integrated computerized systems, provides extensive user training and ensures continuous technical support. Aqua Data has been part of Gaz Métro Inc.'s "Water Group" since 1999.

The company has established and maintained its leadership position in the industry by continuously investing in research and development. The result is a unique suite of integrated, user-friendly software, innovative work methods and some very original equipment. The Aqua Cad® Suite of software and the Aqua Zoom camera for wastewater collection system assessment are but a few of the unique, proprietary tools used by its team of professionals.

Water • Drinking water – treatment and supply systems, and material	• Drinking water treatment systems (filtration and disinfection)

Description of the business

Founded in 1985, Aquasolution Technologies Inc. specializes in custom-made drinking water treatment systems. Highly specialized in this niche, it develops its own systems. Typical applications of the Aquasolution™ line of products include isolated villages, refugee camps, hotels, hospitals, schools and many more.

The Aquasolution™ filtration and disinfection system is designed to solve drinking water problems. Each Aquasolution™ module is easily transportable and introduces a performance-oriented concept. The product is resistant, easy to install and operate, and requires minimal maintenance. All Aquasolution Technologies Inc. products can be made to order and operated with many alternative energy sources. Whatever the clients' priorities in terms of drinking water may be, the company's engineering services can meet their needs.

Water Soil and groundwater	• Management, operation and maintenance of: - Water and wastewater treatment facilities - Water distribution systems - Sewage collection

Description of the business

Aquatech Water Management Services Inc. was founded in Canada in 1981. Aquatech is Canada's leading operator of water and wastewater treatment plants through public-private partnerships, with a strong track record of serving municipalities for over 20 years. Aquatech has been operating under the ISO 9002 Quality Assurance Standard in Canada since 1997 and under ISO 9001, since 2003.

In addition to its basic mandate, Aquatech can also offer clients supplemental service contracts for expertise, management and technical support.

Description of the business

Founded in 1990, Arrakis Consultants Inc. is a consulting firm that delivers professional services in hydrogeology to its clientele, which consists of municipalities, industries, government agencies and consulting engineering firms. The Arrakis team is made up of hydrogeologists and technicians who put their expertise at the service of its clientele for the exploration, use and protection of the groundwater resource.

Arrakis Consultants designs, manages and carries out hydrogeological studies in projects related to groundwater supply, waste disposal, environmental site assessment and site rehabilitation.

- Water - Waste - Climate change	• Sludge handling and disposal • Process optimization/audits • Drinking water production • Industrial wastewater treatment • Municipal wastewater treatment

Company Description

AXOR Experts-Conseils Inc., the principal subsidiary of the **AXOR Group**, is in charge of projects related to consulting engineering services for the last 35 years. The firm has a team of more than 300 professionals, technicians and support staff active in all the engineering fields. The main divisions are Environment; Urban Infrastructures; Structure and Building; Energy; Mechanics and Electricity; Overseeing/Construction . **AXOR Experts-Conseils inc.** has offices in Montréal, Sept-Îles, Longueuil, Vancouver and abroad.

AXOR Experts-Conseils inc. offers consulting services in :

- Environment : wastewater treatment, drinking water production, sludge handling and disposal.
- Civil Engineering: municipal engineering, hydraulics, sanitation, public works, transportation, roads, etc.
- Structures : bridges, viaducts, underground passages, concrete, steel and wood construction, etc.
- Electrical Engineering : lighting, urban electricity, hydroelectric generating stations, building electricity, etc.
- Mechanical Engineering : building mechanics, energy efficiency, fire protection, automation, etc.

Sectors	Products and services
Soil and groundwater	• 3D visualization of contaminated sites • Supplemental site investigation • Feasibility and treatability studies • Remedial design • Design, construction and operation of biological treatment solutions for contaminated soil and groundwater • Comprehensive site remediation services

Description of the business

Established in 1986, Biogenie, a wholly-owned subsidiary of Environmental Management Solutions (EMS), is a Canadian-based international environmental firm providing on site and off site remediation solutions. Serving public and private customers, including major petroleum, chemical, petrochemical and utility companies, Biogenie's distinctiveness lies in its world-class bioremediation know-how and its ability to provide guaranteed fixed-priced remediation solutions.

Biogenie is in the forefront in the development of biological treatment processes for the remediation of contaminated soil and groundwater. As a science-based company with in-house laboratories, research facilities and engineering capabilities, Biogenie has the distinctive ability to cost-effectively treat, with biological processes, a wide range of organic contaminants and high levels of contamination within the context of very large-scale projects.

Water Wastewater – treatment systems and material	Wastewater treatment system for applications involving isolated dwellings

Description of the business

Bionest Technologies Inc. is a company specializing in wastewater treatment, located in Mauricie, Québec. Since 1997, Bionest has focused on developing and marketing a domestic wastewater treatment system that is economical, requires little maintenance and produces a higher quality effluent than conventional systems. The company employs more than 35 people.

The BIONEST™ Treatment System uses a biological filtration process based on a microbial culture fixed to a non-biodegradable medium. Bionest's technology is distinctive owing to its unique proprietary medium, allowing biofilm bacteria to attach effectively while providing a greater active surface area for purification reactions.

Agro-environment Climate change	• Low temperature anaerobic digestion treatment for hog manure • System for conversion of organic fertilizers (by-products) • Low odour level, environmentally friendly, safe and healthy organic fertilizer • Biogas conversion system and GHG reduction • Thermal and electrical energy production unit • Project management services (turnkey projects)

Description of the business

Bio-Terre was created in 1998 and is a consortium of three consulting engineering firms. Its mission is to commercialize, in Canada and the United States, a technology developed and patented by Agriculture and Agri-Food Canada. Bio-Terre has been operating demonstration sites in Canada for three years. The technology will be commercially available in 2005.

Bio-Terre's process helps Canada meet its Kyoto commitments to reduce GHGs by converting methane gas into usable, renewable green energy and reduces the consumption of chemical fertilizers. Bio-Terre's technology is structured around the continued utilization of manure for crop production, in a balanced and sustainable manner, integrating livestock production with food crop production.

Description of the business

Biothermica Technologies Inc, founded in 1987, is a firm specializing in the design, engineering, and construction of turnkey projects pertaining to thermal treatment of gases, control of air pollution and collection and utilization of landfill gas. Biothermica is also a developer of GHG emission reduction projects that generate carbon credits under the Kyoto Protocol and other similar initiatives.

The BIOTOX® system is a regenerative oxidation process developed by Biothermica. The system is designed for volatile organic compound (VOC) and condensable organic compound (COC) emissions produced by industrial processes such as manufacturing asphalt paper, paint, kraft paper, preparing anode paste and printing documents.

Agro-environment Air Water	• Chemicals for the treatment of drinking water and wastewater - Agri-boss - Algi-boss - Rv-boss - Aqua-boss - Enviro-boss - Septi-boss - M.c.-boss

Description of the business

Boss Technology Inc. manufactures algaecide, bactericide and fungicide that are effective ecological and economical alternatives. Boss Technology Inc. is directing its research towards increasing the availability of fresh water and upgrading the quality of wastewater, with economical alternatives that will allow any country to upgrade its facilities to meet new environmental standards.

Research has proven the superiority of Boss products in the control of odours, the liquefaction of organic matter and the purification of bacterial polluting loads from wastewater of agricultural, municipal, recreational or residential origin. Other research has proven the efficacy of Boss technology in safely eliminating undesirable algae from lakes, swimming pools, surface wells and potable water reservoirs.

Company Description

Cansolv Technologies Inc. (CTI) is the leading provider of air pollution control solutions – allowing customers to eliminate all of their air emission pollutants safely and cost-effectively. It will continue to leverage its talented team of engineers and scientists to build applications on the CANSOLV® and AquaNOx process platforms.

Cansolv Technologies Inc. was established in 1997 as a management buyout of Union Carbide Corporation's CANSOLV® SO₂ Scrubbing technology. CTI's principals are the key employees involved in the development of the process. Since 1997, more than a dozen pilot plant tests have been conducted using CANSOLV® SO₂ Scrubbing System and the AquaNOx™ technology.

HAZMAT Spill Response Hazardous materials - Hazardous liquid waste - Hazardous solid waste Waste Treatment systems, equipment and material	- Neutralizers for spills of hazardous chemicals (acids, alkalis, mercury, aldehydes, oxidizers, etc.) - Specialized/customized HAZMAT spill response kits - Specialized waste treatment chemicals

Description of the business

Cartier has been producing innovative chemical specialties since 1939. In 1988, Cartier introduced its VYTAC series of neutralizers for hazardous chemicals. It is one of Canada's foremost producers of spill response chemicals. The VYTAC series includes high performance, safe and economical neutralizers for acids, alkalis, aldehydes, mercury and oxidizers. The innovative VYTAC FNC series of formaldehyde neutralizers for hospital and industrial use has been patented in the U.S.A., U.K. and Canada.

Cartier has introduced the "integrated spill response" concept to the market. This concept promotes the safety enhancement of using neutralizers along with conventional cleanup approaches in the response to chemical spills. Cartier customized spill response kits, applying this concept, are used in the industrial sector as well as hospitals and universities.

Company Description

A manufacturer of ferric sulphate, Chemco inc. has been active in the water treatment industry in Québec since 1988. Chemco is very flexible in terms of product development and has the capability to develop exclusive products for individual customers depending on their needs. Chemco's team consists of engineers and technicians, specializing in water treatment, who have the knowledge to help customers meet their environmental targets.

Ferric sulphate is an iron-based coagulant excellent for phosphate removal in water treatment, odour control and for sludge dewatering. Chemco's ferric sulphate has been certified by *Environment Canada* for many years, and recently by NSF International for drinking water treatment.

Sectors	Products and services
• Contaminated soils • Municipal solid waste • Hazardous wastes	• Treatment and landfill of contaminated soils • Rehabilitation of contaminated sites • Construction of engineered landfill sites • Integrated municipal wastes management • Hazardous wastes elimination

Company Description

The Cintec Group offers all the services required to take charge of contaminated soils, municipal solid wastes and hazardous wastes, from its point of origin for their transportation, treatment, recycling, valorization and disposal.

The core resources of the Cintec Group enable to provide engineering expertise, environmental follow-ups, health and safety plans as well as quality control and quality assurance programs required for the execution of each project. Besides its technologies, the Cintec Group has the expert resources as well as equipments essential to the performance of its activities."

The company is present on the international market and offers various related services such as engineering, consulting and technology transfer for projects with which it is involved as builder and/or operator.

Sectors	Products and services
Environmental assessment and management	• Environmental impact assessment • Risk assessment • Environmental training • Preparation of guidelines and reference documents

Description of the business

Founded in January 1990, CJB Environment offers consulting services to a large number of clients in the private and public sectors. Its fields of activity cover environmental impact assessment, survey of the natural environment and environmental training. CJB Environment and its wholly owned subsidiary, RISCAN, are very knowledgeable in the area of human health and ecological risk assessment, notably with respect to contaminated soil remediation and reuse. In North Africa, CJB Environment operates in partnership with EAM s.a. in Tunisia (CJB/EAM).

Sectors	Products and services
Climate change • Capturing, sequestering and recovering CO₂ • Transformation and reduction of GHGs • Services related to climate change	• Massive CO₂ capture through bio-catalysis, and instantaneous transformation into an aqueous bicarbonate ion solution

Company Description

Incorporated in November 1997, CO₂ Solution became a public company on the TSX Venture Exchange in Toronto in March 2004 (Symbol CST). It offers products and services related to management and abatement of CO₂ in the context of climate change. Its CO₂ capture system is based on bio-catalysis. CO₂ Solution is targeting industrial markets with CO₂ emission reduction goals, biogases, and gas manufacturers and is working in partnership with technology integrators and engineering firms specializing in gas effluent treatments.

In the process of validating its technology of massive CO₂ capture through bio-catalysis, CO₂ Solution is currently installing mobile evaluation units in industrial sites or on biogas emission sites, in close cooperation with gas effluent engineering firms and technology integrators familiar with the selected industrial sector. This sustainable development technology does not require additional energy to compress or liquefy captured CO₂, and the by-product can be recycled with no environmental threat.

Sectors	Products and services
Environmental assessment and management	• <i>CoolVision</i>: quality control devices for sewer and water pipes • <i>Millim</i>: precision laser measuring tool used in conjunction with a CCTV camera

Description of the business

Since 1987, Colmatec Inc.'s personnel has specialized in performance testing newly installed conduits, analyzing systems, and rehabilitating sewer and water pipes. Colmatec Inc., established in Laval, and its affiliated companies now have more than 75 full-time employees. Professionals and technologists in several disciplines, as well as maintenance personnel, look after the various specialized tasks specific to the company's fields of activity.

The *CoolVision* laser profiler is a quality control tool that makes it possible to continuously measure and provide a 3D representation of sewer and water conduits. The technology is used to check the deformation of thermoplastic conduits as well as to verify the shape and thickness of coatings applied during trenchless rehabilitation of sewer and water pipes. It can also evaluate the slope of pipes as well as the water or debris level at the bottom of a pipe.

Millim is a precision tool using a laser aim technology that can be used to measure cracks, service connections or any observations in conjunction with a CCTV camera.

Sectors	Products and services
Waste	• Compost processes for domestic or commercial waste • Plant construction • Technical assistance

Description of the business

Conporec Inc. treats and recycles municipal solid waste through a patented composting and sorting technology. This process reduces the need for landfill disposal by treating 100% of the organic content contained in solid waste, thus reusing and recycling up to 75 % of the original waste mass. In addition, the technology helps to reduce greenhouse gases that are typically released through the decomposition of garbage in landfills. Conporec has successfully operated a plant in Sorel-Tracy, Quebec and recently began start up of a second facility in New York State (United States). A third facility is currently under construction in France near Paris. Through Biomax Inc., Conporec has also delivered thirty different composting facilities that have the capacity to produce more than 300,000 tons of compost annually. Conporec is a socially responsible organization listed on the TSX Venture Exchange.

Description of the business

Founded in 1991, Consulair consists of an integrated structure of chemists, technicians and administrators who form a solid team with more than 75 years of relevant experience in the air-sampling field. With time, it has earned an outstanding reputation with government agencies and private companies.

Mission: To become the leader in the field of air emission sampling by offering fast, professional, personalized service tailored to the specific needs of its clients, while maintaining the highest quality. Consulair is specialized in source emission and ambient air sampling. These services are dispensed by an experienced team using leading-edge equipment and sampling methods recognized by industrial, commercial and governmental institutions. Consulair provides superior services through strict adherence to proven EPS, EPA, CARB, ASTM, OSHA and NIOSH test methods that involve rigorous application of a quality assurance and control program.

Description of the business

CSI Environnement was founded in 1998 under the provisions of Québec's Cooperatives Act. It is a private mixed-ownership corporation composed of private companies and government agencies, operating as a consortium with a board of directors. Its vision: Synergy between government and private enterprise to promote successful exports of expertise from Québec's environment industry. Its mission: Exporting Québec and Canadian expertise in the fields of environmental analysis and management is the raison d'être of this joining of forces.

The mission of CSI Environnement is to provide its international clientele with the most comprehensive and highest quality products and services in the field of environmental management. From a business standpoint, CSI Environnement banks on the expertise of its members and partners in enforcing the principles of sustainable development.

Water Drinking water – treatment and supply systems, and material	Prefabricated water treatment plants that do not use chemical products

Description of the business

For more than 10 years, Dagua has been marketing and manufacturing drinking water treatment systems. Since 2002, Dagua markets chemical-free water treatment plants mainly to municipalities. The DaguaFlo technology, recognized by the Québec Government in 2003 and 2004, has achieved performances that are among the best in the industry. Dagua is also present in international markets through commercial agents.

Dagua markets prefabricated water treatment plants that do not use chemical products to communities that are not connected to a distribution network. The plants can be delivered with or without their own building. They treat non-salty surface waters. Even in heavily polluted raw waters, the treated water will meet all criteria set by the Ministry of the Environment. These plants are simple to operate and very cost effective given their efficiency, their autonomy and the lack of chemical products in the treatment process.

Description of the business

Durpro was established in 1980 to offer clear solutions for providing potable water and re-useable recycled industrial water by integrating applicable reliable technologies including clarification, filtration, membrane filtration (reverse osmosis, nanofiltration, etc.), activated carbon absorbance, etc. to industries and later to small towns and villages. Durpro offers equipment and the technical guidance required to assist in the installation and operation of this equipment.

Specialized equipment manufactured by Durpro includes: reverse osmosis machines and systems, ozone generators and systems, Dur-*flote* dissolved air flotation clarifiers. Durpro also offers skid assembled filtration packages incorporating Filtomat and Amiad automatic self-cleaning filters, as well as bag and cartridge filters.

Company Description

Écotech Inc. is located in Rivière-du-Loup, in Quebec's largest zone of developed peatlands. Significant quantities of sphagnum peat moss are used as a raw material in the company's various manufactured products. Since it began operations in 1994, Écotech has been involved in production, marketing, and research and development in the field of composting and compost.

Écotech's commercial connections with North American leaders in the field of professional ornamental horticulture place the company front and center as a manufacturer of composts and other specialized products. Over the last three years, the firm has also carried out a number of research and development projects in various fields related to composting.

Water • Sludge (municipal, industrial and agricultural) - treatment systems and material • Wastewater - treatment systems and material	• The Electro-Dehydrator: an ecological technology for dewatering wastewater treatment biosolids without adding any chemicals

Description of the business

Established in February 2001 and currently employing a staff of some 10 employees, Elcotech specializes in the design, development and sale of innovative products for wastewater treatment and sludge disposal.

Elcotech's equipment is designed to make it possible to meet the customer's profitability objectives by reducing sludge treatment and management costs as well as meeting environmental obligations. It takes into account the physical constraints of storage capacity, spreading and burying.

Advantages: up to 30% dryness, volume reduction of 50% or more, sludge sterilization and treatment product recycling (coagulant, polymers).

Description of the business

In business since 2004, Electrigaz specializes exclusively in the research and development of biogas solutions for farms and food industry applications. We provide our clients with up-to-date market information and state of the art biogas technologies. Electrigaz focuses its expertise on two primary industries: agriculture and food processors. We help our clients perceive their organic material as a resource not as a waste.

Electrigaz possesses an extensive network of biogas experts and equipment vendors throughout Europe and North America. Our knowledge base also covers: manure treatment technologies, biological treatment of waste effluent, greenhouse gas carbon credits, natural gas and electric energy markets.

Company Description

Stimulated by a portfolio of international projects and partnerships, as well as by the environmental drive that emerged from the Rio and Kyoto summits, Enerkem Technologies aims at becoming a global producer of green energy & green commodities. Today's ongoing move toward sustainable waste management and the ensuing progress in the emerging waste-to-energy sector require Enerkem to develop and maintain a competitive edge in the world marketplace. Enerkem's continuous R&D of novel technologies offers an economically viable approach, not only to the world's waste management problems, but also for the clean energy market.

Enerkem, a Kemestrie subsidiary founded in 1998, currently has a portfolio of four processes covered by eight patents. The company's technology platform is anchored in an international R&D network with focal points at Université de Sherbrooke (Canada) and Kemestrie Inc., Enerkem's parent company specializing in process scale-up. Enerkem is also extending its R&D efforts to the development of a new generation of technologies combining the gasification of waste and biomass with the production of electricity via fuel cells.

Agro-environment	• BIOFERTILE® solution : comprehensive hog manure treatment.
Waste	• FEOS : Industrial, municipal and agricultural sludge drying and biodrying process.
Air	• FLAIR : Waste treatment sites' odors treatment process.

Description of business

Envirogain is a technological company which develops and commercializes solutions and technologies for organic material treatment and reuse such as:

- Hog, bovine and poultry manure
- Municipal and residential sludge
- Agri-food and pulp & paper industries sludge

Envirogain patented technologies allow treatment plants owners and operators to reduce their operation costs and to increase their income. Why? Because of their energy and odor control high-performance, and because produced fertilizer is pasteurized, nutrients-rich, and that it meets with quality standard of a lot of counties. Our technologies are also accredited for GHG abatement, and therefore allow obtaining of carbon credits.

• Wind power - Conversion of mechanical energy into electrical power	• Direct drive generators and power electronics converters for wind turbine manufacturers • High-torque, low-speed alternator with Nd-Fe-B permanent magnets in a transverse flux topology • Alternators based on a topology that can be fabricated according to your specifications

Description of the business

Founded in July 2000, Éocycle's mission is to provide wind turbine manufacturers with a reliable and efficient solution to handle wind-to-grid energy conversion, by eliminating one of the weakest links in traditional wind turbine design: the gearbox.

Éocycle's direct drive generator is based on its own innovative and patented magnetic configuration, known as transverse flux topology. It consists of a synchronous alternator with multiple pole permanent magnets (neodymium-iron-boron) using innovative soft magnetic composite (SMC) components, capable of producing high torque at low speeds. The main competitive advantages of our technology are: small diameter, significantly reduced weight, efficiency, low maintenance, endurance and variable speed.

Description of the business

Foramec, an environmental consulting firm, offers its expertise to public and private organizations carrying out natural resource development projects where biodiversity must be preserved. Foramec has almost 500 projects to its credit since its foundation in 1985. Its team of professionals boasts over twenty years of experience in carrying out environmental studies. Foramec places a premium on the quality of the products and services it provides and has developed and uses an ISO 9001(2000) and BNQ compliant quality assurance system that it applies to all its areas of operation.

Foramec's expertise is in such complementary fields as biology, botany and wetlands, geography, forestry, cartography and geomatics. It is particularly known for its work in botany and plant ecology, animal ecology and wildlife habitats, rare species studies, forest ecology and land reclamation, impact studies and environmental assessments, monitoring and environmental audits, as well as geomatics and cartography.

Water • Sludge (municipal, industrial and agricultural) - treatment systems and material • .Septage sludge	• "Rotary press" dewatering equipment • Polymer preparation system • Conveyor • Silo • Tank • Hopper

Description of the business

Established in 1959, Fournier Industries Inc. has grown into more than a metal processing firm as a result of its skilled staff and its quality products and services. Industries Fournier is proud of the trust it inspires in its customers and its success on domestic and international markets. The company is also at the forefront of new technology. There are 145 employees working at the main factory located in Thetford Mines (Québec).

In addition to its original markets in the mining and metallurgy sectors and the handling equipment industry, Industries Fournier has, over time, developed new markets, in areas such as robotized and automated systems. Most important is the environmental sector, notably due to the introduction of the rotary press, used to dewater municipal and industrial sludge.

Description of the business

Geophysics GPR International Inc., founded in 1974, has a division in Toronto and many partnership agreements in Africa and South America. GPR's mission is to offer practical and efficient solutions for fast and affordable soil and subsoil studies that considerably reduce the need for expensive and uncertain drilling.

Geophysique GPR International Inc. relies on non-intrusive geophysical methods, which provide much more complete information. GPR has 20 employees in Canada and 30 employees throughout the world, all experts in their area of environmental geophysics. GPR's R&D has produced the "Microsis" system, an NDT instrument, the "Tisar" seismic resonance system and the "Helimager" heli-borne gradiometer system, all nondestructive surveying methods to serve the fields of civil, mining and oil engineering.

Water	• Liquid / solid separation equipment • Density separation equipment

Description of the business

Founded in 1975, GL&V is a world leader in liquid/solid separation technologies used in a large number of industrial, municipal and environmental processes. Its Process Group (Dorr-Oliver Eimco) offers a broad range of products and services for metal and ore processing, as well as industrial and environmental processes used in various other sectors such as chemicals, petrochemicals, food, pulp and paper, and energy.

The Water Treatment Group is focused on the development and worldwide marketing of process equipment used in the treatment of drinking water and wastewater. Through its Pulp and Paper Group, GL&V also specializes in the design and marketing of equipment for various stages of pulp and paper production. Finally, the Manufacturing Group specializes in the production of large custom-made parts for the company's other units and an external customer base involved mainly in the pulp and paper and energy sectors. GL&V employs some 1400 people and is present in 40 countries on six continents.

Description of the business

The company, founded in 1982, offers multidisciplinary consulting services in earth sciences, hydraulics, the environment, solid waste treatment, and building inspection. It includes specialized departments in applied geotechnics, environmental characterization and remediation, and hydraulics. The company also acts as a contractor in piling and deep boring constructions. Groupe Solroc is involved in international development in Africa, the Maghreb, and Eastern Europe. This work is in line with sustainable development philosophy and practices. The company is committed to providing quality service and offering practicable solutions at affordable prices, based on an integrated and multisectoral approach

The professional engineers and environmentalists of Groupe Solroc offer environmental project design and site management. Groupe Solroc also contributes to large feasibility studies at the international level. Knowledge of innovative products and keen discernment allow it to offer intelligent solutions in line with the geographical, topographical and cultural background of the populations affected.

Water • Sludge (municipal, industrial and agricultural) - treatment systems and material • Wastewater - treatment systems and material	• Bacta-Pur® system, including micro-organisms, growth accelerators, bioreactors, fermenters and technical expertise

Company Description

IET-Aquaresearch Ltd. was founded in 1984 by Dr. Marie-Claude Cantin and Dr. Karl F. Ehrlich. IET-Aquaresearch Ltd. is committed to quality and excellence and has a policy of continuous improvement. It is dedicated to providing ecologically sound and cost-effective systems, based on environmental probiotics, ecological engineering and biological solutions, to optimize wastewater treatment and to contribute to protecting and restoring the quality of the planet's precious water supply. IET-Aquaresearch Ltd. sets quality standards; it optimizes wastewater treatment processes while reducing operating costs; it increases profitability of aquacultural production and reduces causes of greenhouse warming.

IET-Aquaresearch Ltd.'s multidisciplinary team includes specialists in biology, microbiology, and engineering. They developed the Bacta-Pur® System wastewater treatment equipment and ECOPROBIOTICS™ products that improve water quality, biodegrade organic pollutants, eliminate pathogens, improve aquacultural and agricultural productivity, and reduces causes of greenhouse warming.

Water Environmental assessment and management Waste Soil and groundwater	• Surface water and drinking water management • Water treatment plants • Pumping stations • Waste management • Site characterization • Environmental assessment • Impact study • Resource management • Territory management • Urban development

Description of the business

Founded in early 1990, IMS Experts-Conseils is one of the largest consulting engineering firms in the province of Québec. The firm is active in a number of sectors and present in many provinces of Canada and many countries. Its most important mission is to provide superior quality professional services adapted to the needs of its clients, favouring innovation and the development of added value.

Although the firm is known mostly for its know-how in the metallurgy sectors, it is also active in the environment sector, particularly in water treatment processes. Currently, IMS Experts-Conseils is part of a research and development program related to water treatment membrane processes. Following several bench tests carried out for different cities and municipalities, the firm set up the first membrane-based drinking water and wastewater treatment system in the province of Québec for one of its clients.

Description of the business

Since 1939, IPL Inc. has been designing and manufacturing innovative, high-quality products. These products and the care taken in manufacturing them have earned the company international recognition. Moreover, IPL was the first North American enterprise in its field to obtain ISO 9001 certification, the international symbol of quality.

IPL manufactures more than 400 products at its main plant in Saint-Damien-de-Buckland and at its subsidiaries, especially packaging and handling containers for the agri-food, chemical, forestry, petrochemical, telecommunications, construction, and integrated waste management industries. It also designs and manufactures custom-molded products for the automobile, transportation, defence, maple syrup and consumer electronics industries.

Water Environmental assessment and management • Laboratory services	• LuminoTox – Portable early warning system for toxicity detection in water and wastewater. • Luminos – ultra versatile apparatus allowing simplified analysis for ATP and coliform detection

Description of the business

Founded in 1999, Lab_Bell's mission is to be the leader in designing and marketing fast detection methods for toxic molecules in water, food and physiological liquids. Thanks to its impressive scientific team, Lab_Bell succeeded in introducing two very innovative products on the market, fruits of its internal research: Luminos and LuminoTox. Other products based on the same technology platforms should reach the commercial stage in the near future.

The heart of Lab_Bell's mission is the development and operation of technology platforms aimed at producing and marketing innovative and exclusive products. To date, the work carried out by Lab_Bell has been focused on two distinct products, which arose from the convergence of biotechnology through the use of photosynthetic enzymatic complexes and photonics, including bio-photonics.

Sectors	Products and services
Solid Waste	• Equipment for the solid waste industry • Automated side-loading refuse collection vehicles • Front loading refuse collection vehicles • Rear loading refuse collection vehicles • Recycling collection vehicles • Solid/Liquid separating vehicles for septic tanks • Automated lifting arms & tippers and lifters
Description of the business The Labrie Environmental Group is one of the top three manufacturers of equipment for the solid waste industry in North America whose brands include Labrie side-loaders, Leach rear-loaders, and Wittke front loaders. The Group also manufactures the Juggler brand of solid/liquid separating units and Industrial Lifters brand of tippers and lifters. Labrie Environmental Group distributes and supports its products via a 50-strong distributor network that spans the United States and Canada, and owns and operates a U.S. Parts and Customer Support Center under the brand of LabriePlus, in Oshkosh, WI. The Group differentiates itself from other companies by being the only manufacturer to develop standard-setting technology through design, and by investing heavily in research and development to offer greener, more efficient, smarter, and safer equipment. Labrie's clientele ranges from small to large, private entrepreneurs in the waste hauling sector to national waste management contractors, and small towns and counties as well as, major municipalities and cities. In 1999, The Group was the first manufacturer of-its-kind to obtain ISO 9001-2000 certification.

Water Wastewater – treatment systems and material	- Equipment for trenchless rehabilitation of sewer pipes and low-gravity pipelines - Test & seal mainline & lateral injection packers - Sewer plugs with or without flow-through (Logiball & Logiplug) - Reamer-cutters - Sleeve installers for soft liners & cured-in-place point repair liners & mechanical locking sleeves - Fire hydrant flow diffuser

Description of the business

For more than 20 years, Logiball Inc. has been designing and manufacturing equipment for the trenchless rehabilitation of collection systems and gravity lines. Logiball believes in providing fast, accurate service and the best equipment possible, not only for its customers, but also for end users. Its sense of innovation has led it to design and build equipment prized by trade associations.

Logiball manufactures equipment such as multi-size inflatable pipe plugs, line acceptance test plugs, flow-through sleeve installers for spot repairs and its line of world renowned test & seal packers. Logiball also manufactures and carries an extensive line of auxiliary equipment such as winches, manhole pulleys and fire hydrant flow diffusers.

Sectors	Products and services
Climate change • Energy efficiency • Renewable energy	• Hydroelectric turbines • Studies • Recovery of carbon credits • Biofuel technology

Description of the business

LTCC provides renewable energy sources for remote or off-grid users. The energy from these sources is renewable and ecological, and its price is unbeatable. The technologies developed make it possible to use an ideal energy source: streams with moderate flow and head. In most cases, the microturbines only use a fraction of the regular flow of a stream, by channelling it through a penstock. This makes it possible to produce reliable and renewable energy without creating reservoirs or flooding low-lying areas.

For sites with substantial energy needs, where it is impossible to use traditional technology to obtain renewable energy, the company offers biofuel technology.

Water Soil and groundwater	• Wastewater treatment equipment • Biological treatment • Grit chambers, mechanical rakes, and screens • Filter presses and belt filters • Filtration systems • Drinking water treatment • Sludge dryers • Bark dryers • Final sedimentation tanks • Sludge treatment

Description of the business

Mabarex is a private, Canadian-owned company devoted to the design and execution of water and sludge treatment processes. Founded in 1983, the company has carried out a number of projects involving the treatment of industrial and municipal water, process water, groundwater, wastewater and sludge. The company's team of experienced professionals consists of 32 technicians and engineers, with expertise in chemistry, microbiology, biology, the environment, agriculture, mechanics, and control systems.

Mabarex is constantly investing in research and development in order to remain at the forefront of technology and offer its clients economical, innovative solutions. The company has designed several products, notably circular clarifiers, self-cleaning screens, and grit chambers. In the industrial sector, Mabarex offers internal recycling processes and the treatment of process water and wastewater.

Description of the business

Mac Donald & Sons Inc. specializes in potable water treatment for all applications. Established in 1966, this family-owned business has grown to become one of Canada's leading names in water treatment. From its headquarters in Montréal, and additional facilities in Québec City, and Kingston, Ontario, Mac Donald & Sons serves its customers all over Canada. Since its beginnings, its philosophy has been to provide its customers with the highest quality products and services. New technology and materials are constantly changing the shape of the water treatment marketplace. Mac Donald & Sons has the best team of water treatment professionals, with many years of experience, to guarantee these features at all times.

MacDonald & Sons Inc. is the manufacturer of Mac Softeners and filters of all kinds for potable water and makes units for residential, farm, commercial, industrial or institutional use. There are over 40 models available depending on the application.

Description of the business

Machinex Industries Inc. is a pioneer in the engineering, design, fabrication and installation of material recovery facilities (MRFs). The company has acquired enviable expertise over the years. As a result, it can provide integrated, appropriate solutions to sorting and handling problems, mainly in recycling centres, for the recovery of paper, cardboard, glass, plastic and metal.

Staff know-how and quality products underpin the company's marketing strategy. Machinex is more than a manufacturer. Its staff can offer advice and define complete plans that fully meet customers' needs, both with respect to the volume and variety of materials to be processed and to the objectives that have been set.

Available with diesel, gasoline, propane, or electric motors - LX300: hi-capacity vacuum litter collector - CN200: street & sidewalk sweeper

Description of the business

Madvac Inc. designs and produces vacuum litter-collection vehicles. In fact, it is a world leader in this sector. The business, founded in 1986, has 200 employees and exports its products to more than 30 countries, especially the United States.

The engineers and other members of Madvac's personnel design, manufacture and deliver vehicles of exceptional quality. Its vacuum litter collectors are designed to pick up glass, bottles, paper, cans and other types of small litter on sidewalks, in parks or on the street. The rubbish is picked up through a large hose, normally controlled by the operator, and then collected in a throw-away or reusable bag.

Description of the business

Founded in 1965, Magnor has been a renowned specialist in water conditioning ever since. Magnor provides integrated solutions through a complete range of equipment dedicated to industrial and potable water applications. Its modern manufacturing plant features water analysis laboratories and an engineering department where equipment is designed using the latest CAD technology. Its trained and experienced staff of more than 20 people will provide clients with cost effective solutions to meet their water conditioning requirements and ensure optimal performance of their mechanical equipment. Designed especially for the international marketplace, Magnor's factory-assembled and transportable treatment systems are tailored to clients' local water conditioning needs. The Industrial and Municipal product line includes ion exchangers (softeners – dealkalizers, demineralizers), pressure filters (sand, anthracite, activated carbon, green sand), chemical feed systems (chlorination, process), effluent neutralization systems, and pure water systems (reverse osmosis).

Description of the business

Founded in 1993, NI Plastique inc. is an environmental consulting firm specializing in solid waste management for businesses, institutions and municipalities. At first oriented toward recycling-container distribution, the company rapidly diversified its services, under the banner NI Environment, to include recycling-container design, consulting in waste management, and management of projects related to waste management. The company edits and publishes waste management guides under the Éditions Ruffec banner.

Its products include the EZ-Sorter™ mini wastebasket (over a million units sold in North America and France), metal recycling containers and recycling signs. NI also offers services in waste management, such as waste audits; monitoring studies; waste management plan development; consulting and support; design of recycling containers; awareness, training, signage; and waste management project related studies.

Description of the business

Omega Recycling Technologies is a Canadian manufacturer dedicated to researching and developing products geared to make industry production cleaner. In other words, Omega's equipment enables industry to remain profitable while applying "the three Rs": Reduce, Reuse and Recycle.

As its main area of expertise, Omega has developed a line of equipment capable of recycling all types and quantities of solvents and oils. In addition, Omega has developed various recycling systems, both fixed and mobile, for industries ranging from printing to power generating stations. Omega Recycling Technologies also offers a wide range of products such as air purification systems, wastewater treatment systems, and waste solvent recycling and treatment systems.

Description of the business

Founded in 1996, OmniChem's mission is to develop superior quality products and services that meet the evolving needs of its customers. It strives to exceed customer and industry expectations for superior services, quality, and food and beverage safety. As it pursues this mission, it is guided by the following values: customer service, quality, partnership, efficiency and integrity.

OmniChem manufactures conventional cleaning products, as well as biochemical enzymes and phosphate-free environmental products. It also manufactures products used for disinfection and for odour control and sludge treatment.

Soil and groundwater • Purification and treatment of soil - hydrocarbons • Purification and treatment of soil - others	• Thermal treatment of contaminated soils with hydrocarbons and/or organochlorides

Description of the business

The Récupère Sol thermal treatment facility is a wholly owned subsidiary of Bennett Environmental Inc. The facility features leading-edge technology and is built around a fourth generation thermal oxidizer, designed and manufactured by Bennett Environmental Inc.

The thermal treatment plant remediates soil contaminated with hydrocarbons and a wide range of chlorinated material, including PCBs, DDT, dioxins and furans. Through Récupère Sol's innovative thermal treatment process, contaminated soils are combusted at extremely high temperatures to separate, remove and destroy the contaminants, leaving the soil completely safe for reuse.

Water Soil and groundwater	• Precision monitoring instruments • Complete integration services • Instrument installation • Startup of acquisition systems • Personnel training • Long-term maintenance if necessary

Description of the business

Roctest is a publicly traded company that has been in business since 1967. It is part of the Roctest Group (RTT) and employs 70 people. In 1991, Roctest joined forces with French company Telemac and, in 1994, acquired FISO Technologies. Its products are sold in more than 75 countries by direct sales and through an international distributor network. Its mission is to design, manufacture and market high-precision instruments to improve the products and services of its clients and partners.

Roctest designs and manufactures instruments but also offers complete integration services. The integration team installs the instruments, starts-up the acquisition systems, trains personnel and, if necessary, ensures long-term maintenance of the equipment. The main goal of instrumentation is to understand structural behaviour and to provide durability, as well as finding any abnormality that could have a direct or indirect impact on the surroundings and the environment.

Description of the business

Founded in 1964, Rodrigue Métal Ltd.'s objective is to specialize in wrought metals and general welding. Today, it has three plants in the Québec area. The company includes the Rodair division, which designs and manufactures several industrial air filtration products: dust collectors, cyclonic ventilators, industrial ducting, conveyors, etc. The Rodair division has 95 employees.

Rodrigue Métal provides a complete range of products that adapt to various sectors and meet specific industry needs for systems in the following areas: dust collection, pneumatic conveyors, mechanical conveyors, storage and crushing. All of these products are designed and manufactured to the highest industry standards and comply with design and environmental standards. They allow the optimal use of raw materials by increasing the economic value of waste and by maximizing energy use.

Description of the business

Sanexen was founded in 1985. The company employs 100 engineers, scientists and technicians and offers its services to public and private sector enterprises and organisations. Sanexen has annual revenue of more than 25 million dollars. Since its beginnings, Sanexen has grown through the development and operation of its own technologies. These technologies are:

Aqua-Pipe™ : a structural lining process to rehabilitate damaged and leaking water mains;
 Ultrasorption™ : a mobile system for treating water contaminated by organics compounds
 TerraSys™ : a software program for toxicological and ecotoxicological risk assessment;
 Decontaksolv™ : a process used to decontaminate and recycle metal from PCB impacted electrical equipment.

Climate change Waste	SmartSoil System™ • Turnkey biogas solutions adaptable to existing and new landfills • Gas exploration campaign • Conditioning and drying of biomass, transformation into solid fuel

Description of the business

SmartSoil-Energy Inc. aims to be a major contributor to the international effort toward greenhouse gas emission reduction and a market leader as a provider of technology for clean energy and climate protection. SmartSoil does so by providing innovative solutions for converting “problem biomass” into clean gaseous fuel, primarily through landfill-gas-to-energy initiatives. The technology is patented (with verified proof of concept), providing unprecedented monitoring and control capabilities.

SmartSoil is actively marketing the BioFuelCell, a highly efficient technology known for stabilizing waste in 5 years, while producing more gas, of better quality, at a constant rate. This technology can help increase the lifespan of a landfill, gain valuable pore space, generate high quality fuel for clean energy production, and obtain green tags or CO₂ credits. The return on investment is fast and high.

Description of the business

SCN-Lavalin Environment Inc. (SLEI) is one of Canada's most efficient consulting engineering firms in the realms of environmental sciences, environmental engineering and geotechnics. SLEI is a member of SNC-Lavalin Group, Canada's leading engineering firm and a world leader. It has annual sales of more than \$3 billion and has hundreds of projects in progress in Canada and around the world. Services provided in Québec include: ground water; environmental impact studies; environmental audits; training and technical assistance; geological and geotechnical studies; contaminated site characterization and restoration; professional services related to solid and hazardous waste; mining sites; control of construction and quality of materials; air and acoustics; fisheries and aquatic environments.

International presence	Fields of application

Description of the business

Sodexen, established in 1975, has experienced marked and sustained growth and now ranks among the leading service firms devoted entirely to environmental protection. The company employs more than 80 professionals working on multidisciplinary teams in all of the environmental disciplines, including chemistry, biology, public health and hygiene, engineering, geology and urban planning. Sodexen operates its own analytical and research laboratories outfitted with ultramodern equipment.

Description of the business

Sofame Technologies Inc. is a world leader in direct contact heating technology, a process by which water is sprayed directly on a gas burner flame. Sofame holds the exclusive production and distribution rights to patented systems specially designed for the institutional, industrial and commercial markets as well as for space heating. These systems have been developed in cooperation with partners such as the Natural Gas Technologies Centre, Gaz Métropolitain, Gaz de France and Keyspan Energy, of New York. Sofame products offer an economical source of heat or hot water, as well as a major reduction of greenhouse gas emissions. Sofame is listed on the TSX Venture Exchange under the symbol SDW.

Description of the business

Solinov Inc. is a consulting team that includes professional and technical resources from the fields of engineering and agronomy, specializing in the environment and more specifically in organic waste management, treatment and beneficial use in agriculture, horticulture, forestry, landscaping and land reclamation. The members of its team have extensive experience in the field and are recognized as experts in their speciality. They keep up with the latest international scientific and technical developments in the field.

Solinov's mission is carried out with the objective of implementing efficient and sustainable solutions to waste management. Services are adapted to the various constraints and specific needs of its clients while protecting the environment and promoting principles of resource conservation. Its clients are municipalities, government agencies, industry and agri-food businesses (production, transformation, distribution).

Description of the business

Since 1981, Solmax International Inc. has offered its clients a complete range of high-quality products and services related to geosynthetic containment systems for domestic, hazardous and industrial waste burial sites, retention ponds, and mining waste lixiviation lagoons, ranging from in-plant manufacturing to on-site installation.

Containment systems rely on geomembrane technology and depend on proper design and construction as well as product quality. Since 1989, Solmax International has also developed its own dielectric heat sealing system for in-plant preassembly of flexible polyvinyl chloride (PVC) geomembrane sheets used in ponds, tanks, and reservoirs.

Description of the business

Solmers Inc. is a Canadian company specializing in environmental engineering. Its specialists have been working every day, locally and internationally, for nearly 20 years, on specific projects relating to fields such as impermeable containment, environmental geotechnical engineering, waste management and environmental analysis, assessments and audits.

Sustainable development, meeting the client's requirements, maximizing process efficiency and reducing costs, and maintaining high quality standards are commitments Solmers makes in carrying out all its projects, through its quality policy.

Description of the business

Sonitec Inc. was founded in 1986 to manufacture and market innovative products and technology aimed at improving the quality of the water used in cooling and heating processes so as to improve process energy efficiency and environmental performance.

Sonitec's technical team provides customers with complete solutions including the pre and post treatment required to ensure that all standards are met. Company expertise in manufacturing quality products meets the toughest requirements. Whether customers want to install a new water treatment system or upgrade an existing one, Sonitec offers the most viable and cost effective solution for their specific needs. The company's objective is to fully meet client requirements.

Description of the business

Technisol Environnement has carried out more than 15,000 projects in the fields of site assessment, site remediation, environmental management and industrial hygiene. The services are provided as consultants, project managers or contractors. The company relies on more than 50 engineers, technologists and technicians, specializing in geology, hydrogeology, microbiology or chemistry, and provides its services to major petroleum companies, many federal and provincial government agencies as well as commercial, industrial and financial companies.

Principal equipment built by Technisol Environnement:

- Aeration basins, oil separator, activated carbon filters, cyclonal dehumidifier
- Mobile water treatment unit (light hydrocarbons)
- Treatment unit for cement plant wastewater
- Soil and groundwater treatment unit using multi-phase, dual-phase and vapour extraction
- Treatment unit for metal impacted groundwater (mechanical filtration and cationic resin)

Water • Drinking water – treatment and supply systems, and material • Consulting services – wastewater Climate change • Energy efficiency	• Supply of pre-insulated pipe for protection and for district heating and cooling • Heat tracing systems, including Urecon's constant watt Thermocables® and thermostats • System design assistance

Description of the business

Urecon has been factory-insulating pipe with polyurethane foam using the patented U.I.P.® process since 1973, in St-Lazare, Québec, and 1981, in the Calmar, Alberta facility. Today, millions of metres of Urecon insulated pipe are in service throughout Canada, the United States, Mexico and the Caribbean. Currently, the company employs 70 people, with up to 110 during the summer season.

Urecon U.I.P.® processed pipe insulated with rigid polyurethane foam is the best insulation commercially available today. Urethane is an insulation material that becomes a permanent installation, as it has excellent heat, moisture and chemical resistance. Urecon's insulation process ensures a homogeneous, void-free layer of rigid polyurethane foam insulation bonded directly to the entire pipe surface. The foam is then protected by a black polyethylene or metal outer jacket.

Waste	• Dynamic weighing systems (legal for trade) for refuse trucks • Management software for refuse pay-as-you-throw (PAYT) programs • Telecommunications systems for data transfer from the refuse truck to management software

Description of the business

In business since 1995, Xactec Technologies' mission is to offer municipalities and private businesses in the refuse sector complete and automated solutions to reduce the quantity of waste material generated and encourage recycling by the optimization of customer accounts. Xactec has systems in operation in all of eastern Canada and the northeastern United States.

Xactec™ is a leading value-added supplier of measuring and computerized management systems for the environment industry. Its products and services, designed for waste management operations, integrate dynamic weighing technology with advanced business processes that help municipalities and waste collection companies meet their profitability and efficiency objectives.
