2013 REPORT

Looking back, can you recall the news items that ushered in the last New Year? What were the media happenings of 2013 that caught your attention?

Each year, our report offers readers the opportunity to refresh memories and to highlight certain points, besides serving as a teaching aid in many classrooms. It is a way of freezing in time that which is most ephemeral: news. By ten o'clock, a daily is already going stale, while twenty-four hours later, 85% of its news has vanished. With social media, it takes only 20 minutes for most keywords to be forgotten. More than ever, we are living in an era of disposable information: like fast food, we have fast news as well. How about an order of fries with that paper?

For the last nine years, we at Influence Communication have been putting our modest resources, a lot of work and boundless enthusiasm into publishing our Review of News Annual Report©. We believe in the importance of understanding media processes and their impact on society, but also – and especially – in the individual responsibility that we all have to make better use of the media's various products, viewing them critically, and thereby becoming better citizens.

On behalf of all of us at Influence Communication – analysts, advisors, researchers and artisans – enjoy!

Jean-Francois Dumas

Conclusion

2013 OVERVIEW

DID YOU KNOW?

The Rob Ford story received six times more coverage than Chris Hadfield's mission in space.

Rob Ford accumulated the equivalent of \$1.1 billion worth of advertising in the month of November alone.

2013

IN THE NEWS

In 2013, Canadian news output totalled over 10.7 million news items. Taken together, the three main themes of sports, politics and the economy accounted for nearly 45% of all news.

However, the one news item that received the most coverage in 2013 was an international news story – the bombings at the Boston Marathon in April – which did not fall within any of the above three themes. It soared to first place with an MPS of 14.70% of all news between April 16 and 22.

Sadly, another tragedy was responsible for the number two news item of the year: the derailment and explosion of a train in the heart of Lac-Mégantic. Besides ranking as Quebec's top story of the year, it was also widely covered from sea to sea, with an MPS of 8.96% between July 9 and 15. The Lac-Mégantic tragedy even found itself among the top three most covered

news stories worldwide for three consecutive days – a first in Canadian news.

Turning to sports, we can see that hockey still dominates our media, with 23.17% of all sports news being related to hockey. In Ontario, this proportion hits 44%. The ratification of an NHL agreement to end the lockout in January 2013 was the biggest sports story of the year, ranking third among all news stories. Fourth place in our top news ranking was taken by the election of Pope Francis. Meanwhile, the ongoing saga of Rob Ford's woes ranked tenth in Canada's top news stories in 2013. He was Canada's top media figure of 2013, even outranking Prime Minister Stephen Harper. The mishaps of Toronto's mayor were talked about in over 60 countries worldwide.

Year in, year out, federal politics have always been a pet topic of the Canadian media. This year, the Wright-Duffy-Brazeau scandal gave them plenty of material. Even though the story only ranked 20th in news items of the year, it was unique in that it remained within the top 10 for several weeks – no mean feat, considering that 85% of news has a life expectancy of 24 hours or less.

In June, flooding in Calgary also dominated the news for several weeks, making this natural disaster the eighth top news item of the year.

Starting point of news stories

Which type of media is the first to break news each day? Clearly, social media, the web and tablets are playing a growing role in the Canadian media ecosystem. For example, in 2011, only 1% of stories appeared first in social media in the morning, and 13% made their first appearance there during the rest of the day. In 2013, these figures had grown to 9% and 16%, respectively. We have seen a decline in this respect for radio almost every year.

TYPE OF MEDIA	Morning	Rest of the day
Television	7%	41%
Web and tablets	18%	23%
Social media	9%	16%
Radio	9%	14%
Weeklies	1%	5%
Dailies	56%	1%

THE ROB FORD STORM

Get ready – here comes Rob Ford

If, in 2012, you had asked Canadians outside of Ontario whether they knew who Rob Ford was, some might have known the mayor of Toronto. At that time, Rob Ford was already in the news for having used official letterhead to raise money for his football foundation, and his name was mentioned over 7,500 times in Canadian newspapers that year.

With his various setbacks and mishaps, Rob Ford ranked 14th in our annual list of the top 50 individuals who got the most media coverage.

But 2012 was just the beginning...

Red alert: the “Rob Ford Show”, live

The first instalment of the “Rob Ford Show” came on May 23 when two journalists from the Toronto Star revealed that they had seen a video of the Toronto mayor consuming crack cocaine. Following those statements, the video in question (along with its owner) disappeared. After months of speculations, the police finally found the video and Rob Ford was forced to admit that he had smoked crack. He defended himself by claiming that the crack-smoking episode had occurred during a “drunken stupor”. On top of this drug scandal, Rob Ford also had to: 1) deny having had sex with a prostitute in his office; 2) deny having an alcohol problem; 3) apologize for a sexual reference about his wife; and 4) apologize to a journalist for implying he was a pedophile.

The aftermath

As a result, no story in the 21st century has given Canada more exposure. Rob Ford received four years worth of airtime and enough was written about him to fill six years of a daily newspaper. He accounted for 19% of all foreign coverage devoted to Canada in November. The story appeared in 75 different international media and was the third most-covered story in the world on November 6. His story received 1.4 times more coverage than the Lac-Mégantic tragedy. Rob Ford went on to dubious fame on numerous US late-night shows which found an abundance of comic material in his looks, personality and disastrous political escapades.

Put all this together and you find the Rob Ford story well in the lead of our top 10 political news ranking, and in 10th position on our top 50 news stories list. He was also number one on our top 10 political news ranking and, once we broke down the different segments of the story, Rob Ford was responsible for 25% of the top 20 political news stories in Canada and received a certain percentage of coverage in every week of 2013. It may be of minor consolation to the beleaguered mayor – who once announced his intention to become prime minister – that he now heads our list of top public figures, even edging out the prime minister who traditionally holds the first position.

Season 2 of the Senate crisis:

The price is Wright

The second season of the Senate scandal had everything to keep the suspense going all throughout 2013. Rumours, fraud, betrayal – the second instalment of this all-Canadian saga had it all.

Like a carefully-plotted thriller, the unfolding of events surrounding the Senate crisis kept audiences on the edge of their seats. From Mike Duffy's disturbing revelations to internal emails and cheques signed behind closed doors, this crisis reminded us that at times, truth is indeed stranger than fiction.

As can be seen in our timeline of the year's biggest stories at the beginning of this review, this was the story that wouldn't go away, as it clung to the charts week after week without ever really dominating. In fact, there were really only two "episodes" that made it up to our top 50 of Canadian news in 2013. The first was the initial Duffy-Wright affair in late May, with an MPS of 2.68%; followed by the expected sanctions against senators Duffy, Brazeau and Wallin, a story which took up two weeks in late October with an MPS of 2.36% and 2.66% respectively. It should also be noted that the story regularly made our weekly top 15 of Canadian news on other weeks.

One of the reasons that these "episodes" attracted so much attention was that the actors involved were actually already TV "stars", as all of them were in our Top 100 of Canadian public figures: Mike Duffy ranked 4th, Patrick Brazeau 13th, Pamela Wallin 66th and Nigel Wright 85th.

The popularity of the ongoing drama further spread throughout the Twittersphere. In Canada alone, nearly 278,465 tweets were sent containing the word "senate" or "sénat", thus exceeding the number of messages about Stephen Harper, who generated 256,443 tweets last year. It also accounted for as many tweets as all the mentions of Justin Trudeau, John Baird, James Moore, Thomas Mulcair, Vic Toews, Jim Flaherty and Peter Mackay taken together. As well, several words related to "senate" found themselves a place on Twitter, especially "cdnpoli", "duffy", "scandal" and "expenses".

All in all, the many twists and turns of season two led to its resounding success in the media. Now that the story has culminated with the suspension of its three protagonists, audiences anxiously await the next instalment of this ongoing Canadian cliffhanger. No spoiler alerts needed, we all want to know!

O Canada or HOCKEYnada?

Hockey is more than just our national sport – in some areas, it draws a quasi-religious following of dedicated fans. From sea to sea, election promises to build, renovate or enlarge arenas, to secure or bring back an NHL franchise regularly make the headlines.

How is our national sport shown in the media?
How does it measure up against other sports? Is
Canada really a one-sport country?

In 2011, sport in general was the number two theme in Canadian media, right after national politics. The next year, the London 2012 Olympics helped edge sports news up to the top of the list. It remained there in 2013, due in part to the end of the hockey lockout and news of a mega-contract between the NHL and Rogers.

Among the 35 sports seen in the media in 2013, in the run-up to the Sochi Winter Olympics, hockey took up more than 23% of Canada's media space.

TOP 35 SPORTS

IN CANADIAN NEWSPAPERS IN 2013

SPORT	MPS
Hockey	23.17%
Football	13.24%
Golf	11.54%
Baseball	10.14%
Soccer	8.46%
Basketball	6.97%
Curling	3.90%
Tennis	3.79%
Skiing	2.41%
Volleyball	1.84%
Cycling	1.80%
Boxing	1.31%

Hiking	1.16%
Track & field	1.09%

Canoeing	0.15%
Biathlon	0.14%
Synchronized swimming	0.13%
Kickboxing	0.10%
Bobsleigh	0.08%
Waterpolo	0.00%

Hockey takes up about twice as much media space as its nearest contender, football. Perhaps hockey's supremacy could be toppled if baseball and football joined forces in a new sport – contact baseball, anyone?

If all the names of NHL players, coaches and teams are removed from the over 140,000 mentions of hockey in 2013, the sport's MPS would plummet down to under 2%. What this means is that professional hockey takes up 98% of all Canadian media coverage of the sport.

Top teams in the media

A comparison of the top teams of the two sports most covered by Canada's media shows that the seven hockey teams top the list. The only "intruder" is the winner of the Grey Cup – the Saskatchewan Roughriders – who managed to squeeze in ahead of the Winnipeg Jets in the ranking.

TEAM	MPS
Toronto Maple Leafs	13.82%
Ottawa Senators	12.14%
Montreal Canadiens	10.87%
Vancouver Canucks	10.06%
Edmonton Oilers	8.60%
Calgary Flames	7.06%
Saskatchewan Roughriders	5.11%
Winnipeg Jets	4.99%
Montreal Alouettes	4.26%
Calgary Stampeders	4.18%
BC Lions	3.94%
Hamilton Tiger-Cats	3.93%
Toronto Argonauts	3.85%
Edmonton Eskimos	3.54%
Winnipeg Blue Bombers	2.97%
Ottawa RedBlacks	0.68%

DID YOU KNOW?

AMATEUR VS. PROFESSIONAL:

Of all the sporting news coverage in 2013, "professional sports" was mentioned 99,9982% of the time, leaving "amateur sports" with only 0,0018% of coverage.

CANADA AND THE WORLD:

In Canada, sports news was number one in 2012, second in 2011 and in top place in 2010 as well. Worldwide however, sport news ranked fourth in the same years.

A year of media confessions

2013 was the year of confessions from our politicians, as they took turns admitting to having used certain drugs. It all started in mid-summer, when the leader of the Liberal Party of Canada stirred up the debate on the decriminalization of pot. A few weeks later, Justin Trudeau admitted to having used marijuana about five or six times back when he was just an MP. This story monopolized the attention of the media in the week from August 20 to 26.

Journalists had a field day with his admission, even attempting to drag other politicians into the confession booth. Some refused to answer while others took advantage of the informal, jocular tone of the discussion to join in the banter. The overall outcome seemed to encourage other politicians to make similar confessions to the press, including Ontario premier Kathleen Wynne and P.E.I. premier Robert Ghiz, who also admitted to having used marijuana.

Even Mayor Ford of Toronto, while denying allegations of him using crack, admitted rather offhandedly to having smoked “a lot” of cannabis.

Marijuana in the media – a timeline

Our data compiled from the Canadian written press over the year 2000 shows a little over 10,000 mentions of cannabis, marijuana or pot. A slight progression is shown from 2001 to 2011, peaking in 2005, when Health Canada published a study showing that young people can access marijuana more easily than cigarettes. Overall, the media's interest in the topic has followed a gradual but steady increase over the last 14 years, only to take off dramatically last year, when we counted over 22,000 mentions in the first 50 weeks of 2013. Thus, our politicians have been responsible for giving marijuana the most PR in 2013. Love it or hate it, it's a topic that's here to stay!

Pot, cannabis, marijuana
Mentions in the Canadian press

(*) until December 19th

Trudeaumania... Take II?

In the late sixties, millions of Canadian voters fell under the spell of a young politician with all the charisma of a pop singer or a movie star. The press soon found a name to describe the shrieks, applause and crowds clamouring for autographs and photos that followed this young lawyer-in-training wherever he went: Trudeaumania was born.

More than seven years after the death of Pierre Elliott, Justin Trudeau is now following in his father's footsteps and entering politics. Comparisons are inevitable, as journalists and pundits comment on the similarities between the two men: their youth, verve and good looks.

Justin was elected MP for Papineau, a Montreal riding. After surviving Quebec's Orange Wave during the 2011 federal elections, Justin launched his bid for the leadership of the Liberal Party of Canada in October 2012. At this point, the LPC was the second opposition party in Ottawa.

By January 2013, the dust had visibly settled, as the LPC leadership race was no longer making the Canadian news top 10 in our weekly reports. This trend continued over the rest of the winter. By spring however, the leadership race rose to second place in the list of top news between April 9 and 15. However, Justin Trudeau's resounding victory as party leader on April 14 last year only made it to second place behind the Boston Marathon attacks. Due to the massive coverage of the events in Boston, reactions to Justin's victory took up less than 1% of the media's attention over the following week.

In mid-June, when Trudeau offered to reimburse all speaking fees that he had received from various organizations, he rose to third place in top news, under the reports on Alberta floods.

Last July, Justin Trudeau reignited the debate on the decriminalization of marijuana. As the parliamentary press tittered over the young party leader's choice of priorities, the news item reached an MPS of 0.31% and rose to 16th place in the ranking of top news stories between July 23 and 29. It must be noted that at this time, the media was largely focused on the birth of the royal baby.

Accordingly, Trudeau would have to wait until the week of August 20 to 26 to rise to the top again when he made a stunning statement: the former teacher admitted to having smoked marijuana. This news hit the top of the Canadian news ranking for the week and continued to make waves the following week, when it dipped down only to second place.

Despite an attack by Peter Mackay, Trudeau's statement did not escalate into a PR disaster for the Liberal Party, as the media seemed to be more forgiving of voluntary confessions than of scandals. Reports even showed citizens hugging Trudeau, congratulating him for the stand he had taken on the issue.

Amidst the Senate scandal and the LPC's results at the last by-elections in the weeks to follow, he did not return to the top of the media scene, although his statements still kept him within the top 10.

In the end, Justin would finish second overall in the ranking of the top 20 federal politicians for 2013. Compared to his seventh place in 2012, this is a dramatic ascent for an MP who was not even on the list in 2011.

Where will we see Justin Trudeau in 2014?

Health problems in the news – media sicknesses?

There is a general expectation that the importance of an event is in direct proportion with the amount of media coverage devoted to it. We at Influence Communication took a look at how frequently various health issues appear in the media, and whether their coverage is actually in proportion with the number of people suffering from the ailment in question.

According to the data which we collected, depression, diabetes and concussions were the health problems that got the most coverage in Canada's media in 2013. Would this imply that they are also the most common or the most dangerous?

Figures from the Canadian Cancer Society show that cancer and heart disease were Canada's top killers in 2009, with 30% of deaths attributed to cancer and 20% to heart disease. Thus, the coverage of a disease is not directly linked to the number of cases or to mortality rates.

To find why the media focuses on certain issues more than others, we have to look to other factors:

- A health problem can be inadvertently connected with another major media issue. For example, Canadians' nearly pathological obsession with hockey probably explains the frequency with which concussions are mentioned in the media. Similarly, persons suffering from depression or Alzheimer's are frequently involved in various mishaps and accidents that make the news.
- As well, the quality of PR – fundraising, high-profile spokespersons, studies, telethons and other events – for the disease can have a big impact on the degree of media coverage.

Case study: Angelina Jolie

Angelina Jolie seemingly had it all: *People* declared her most beautiful woman in 2006, *Maxim* the sexiest in 2008, while *Forbes* listed her as best-paid actress in 2013. Yet, on May 14th of last year, she published an open letter in the *New York Times* explaining her decision to undergo a preventative double mastectomy.

The media went wild. Her choice, however personal, was scrutinized in detail. Some weighed the pros and cons, others lauded her courage. Concerns were raised that her draconian approach would lead to a wave of panic among other women suffering from the same disease, while cynics went so far as to suspect that a sponsor was involved.

To put it all into perspective, consider that of the 23,800 Canadian women who will be diagnosed with breast cancer this year, only 1,190 will be found to suffer of the same type of cancer as Ms. Jolie.

The name of this cancer gene, BRCA1, became one of top words searched on the internet, while the MPS for the BRCA1 gene was nearly four times higher between May 14th and 30th than for the rest of 2013.

Of all the mentions of the defective gene, 77.43% were generated in connection with Angelina.

All of which leaves us to wonder – is this a case of the victim promoting the disease or of the disease promoting the victim?

DID YOU KNOW?

If we look at its share of coverage in the Canadian media, health ranks 13th – far below national news, local news, sports, economy, cooking and technology.

Rank	Ailment or disease	MPS	% of Canadians affected*
1	Depression	11.09%	10.00%
2	Diabetes	9.32%	6.88%
3	Concussion	7.23%	0.11%
4	Alzheimer's	6.60%	2.14%
5	Breast cancer	5.71%	0.07%
6	Heart disease	5.33%	3.73%
7	Flu	5.09%	22.94%
8	Autism	3.28%	0.57%
9	AIDS	3.21%	0.01%
10	Arthritis	2.75%	11.47%
11	Leukemia	2.44%	0.02%
12	High blood pressure	2.18%	15.51%
13	Multiple sclerosis	2.05%	0.22%

**We analyzed the health-related content of 38 major Canadian daily newspapers, English and French. The percentage represents the contribution of each to the total health-related content. We did not consider the length of the articles nor their location. Nearly 200 English and French key words were used in our research. These relate primarily to health financing and administration, H1N1 flu, food, drugs, alcohol and cigarettes, diseases, women's, seniors', men's, children's and teenagers' health, workers, health ministers, etc.*

METHODOLOGY

DID YOU KNOW?

According to a study by Google
4.8 billion people have access to a smartphone,
4.2 billion people have access to a toothbrush.

Research methodology

Media prominence over one year

The media prominence score is a quantitative indicator that measures the space devoted to an individual news item in a given context. It does not take into account the value of the argument presented in the media or the tone of the coverage.

In order to evaluate the media prominence score of news items over a period of one year, Influence Communication collects every mention of the item in all dailies, most weeklies, on main information websites, on news and public interest programs on television, as well as on some radio and television variety shows. Influence Communication also takes into account magazines with general news, economic or scientific content, but does not use data from radio music shows, advertising, soap operas, game shows, classified listings, obituaries or internet content.

The importance of news items is weighted according to the volume of coverage and the media treatment received. The media prominence score of each news item is determined according to the mean volume of all the news elements during 2013. As all news items are quantified according to the same method, it is possible to compare the space that each has occupied during the year based on a percentage.

Media prominence scores for public figures

Influence Communication also compares the media prominence of different public figures by sector (political and non-political). The number of mentions was calculated from January 1st to the beginning of December 2013. The media prominence score for public figures was calculated by comparing the public figures with one another according to a 100% value. The prominence of public figures in news is weighted based on the volume of coverage and the media treatment they receive.

Media prominence scores for themes

Most news items can be grouped within the main news themes: world news, economy and business, politics, sports, arts and entertainment, etc. Each theme is given a percentage which represents the proportion taken up by the theme within all news.

About Influence Communication

Influence Communication, established in November 2001, is Canada's premier news broker and information aggregator. We serve hundreds of clients, including some of Canada's largest corporations, as well as many major public relations firms.

The Influence Communication supplier network is made up of about 100 partner organizations providing access to newspapers, magazines, radio, television and internet coverage in 160 countries. Our information brokerage network allows us to assemble information every day from five continents. Influence Communication also uses its own delivery platform to provide customers with internet media monitoring. Our Interactive Communication Environment (ICE) allows quick information delivery to our clients as it dissects entire internet sites such as theglobeandmail.com in as little as 16 milliseconds. On an hourly basis, the ICE system monitors more than 600 websites in Canada, and more than 7,000 around the world.

In order to understand the news and carry out our quantitative analyses, we aggregate, sort and analyze hundreds of thousands of news items on a daily basis from newspapers, radio, television and the internet. Thanks to our technology, we have created a measurement of quantitative information analysis – the Media Prominence Score (MPS) – which enables our clients to evaluate the media penetration rate of their own news stories relative to coverage of other stories.
