## TYREE'S ANTISEPTIC POWDER

WAR DEPARTMENT  
Surgeon-General's Office

Washington, D. C., Jan. 3, 1910.  
This is to certify that the exact antiseptic strength of Tyree's Fulv. Antiseptic Comp. is one part of the powder to 50 of water (1:50). Test tubes containing peptonized beef broth were charged with the powder (Tyree's Antiseptic Powder). The solution was then inoculated with the Anthrax Bacillus and with the Staphylococci of Pus and the tubes placed in the incubator for 48 hours at a temperature of 37° C. On removing the tubes from the incubator it was found that in the solutions of one in ten to one in fifty there was no development of Bacteria.

Formula on every box. Always insist upon getting original packages. Only the genuine Tyree's Powder reliable. Literature and trial sample free.

W. K. GRAY, M.D., Microscopist,  
Army Medical Museum.

THE smallest actual fact is better than the most magnificent statements of impossibilities. Tyree's Antiseptic Powder promises no more than it really does. It has been found extremely useful when applied to all mucous surfaces, external or internal—Vaginal, Urethral, Rectal, Nasal, Oral, Pharyngeal, Intestinal, etc. Dilutions up to one part in fifty are still germicidal; that gives great value and makes it economic. Its range of utility in the large field of antiseptics is wider than that of any other preparation.

# THE PRINCIPLES OF OBSTETRICS

A Practical Manual for the Student and General Practitioner

By STANLEY PERKINS WARREN, M.D., Portland, Maine

Obstetric Surgeon to the Maine General Hospital—Consulting Physician to the Maine Eye and Ear Infirmary, Etc., Etc.

This work has been written to provide the student with a complete reliable textbook, covering the whole ground as embraced in the curricula of most schools, with all the fulness necessary to clearness, but omitting everything not essential or practical. Theories, unless well demonstrated, are considered as of minor interest to the student. The aim has been to present the essential facts in plain and simple form, that the undergraduate may acquire the science and art more in the shape it will assume when put to practical use. It is the most compact textbook of obstetrics published.

The book will possess the additional advantage of a working hand-book adapted to the requirements of private practice, where the refinements of hospital instrumentation and nursing are conspicuously absent. It teaches that aseptic midwifery is possible under the restrictions of the private home, with the simpler armamentarium of the obstetrical handbag.

The work is superbly illustrated. The cuts, which are very numerous, are all original or redrawn and re-engraved. Many of them are from original photographs by the author, and are very beautiful. No trouble or cost has been spared on the cuts, and the pictures illustrate, as well as please. The volume is handsomely printed, on coated paper.

Octavo, 385 pages, superbly illustrated by 165 engravings. Cloth, \$3.00 net. Leather, \$3.75 net. Send for illustrated circular.

## DISAPPEARING CASTS

The gradual disappearance of the casts, albumen and dropsy and increasing specific gravity, is the eloquent response of Chronic Nephritis to Triosine. It arrests degeneration in renal tissues and is the first successful treatment in chronic forms. It contains no narcotics or sedatives, but is diuretic and purely eliminative. The fact that paracentesis has been required does not prevent recovery. Write for brochure outlining the first and only successful treatment for Chronic Nephritis to

### GLYCO-HEROIN (SMITH)

The value of this preparation in the treatment of Coughs, Bronchitis, Phthisis, Pneumonia and kindred disorders is not a thing that is to be established; it has already been established to the complete satisfaction of the medical profession for whose use it is expressly designed.

As the employment of this preparation becomes more widespread, confidence in it becomes more deeply entrenched. For that reason Glyco-Heroïn (Smith) has not stood, and never will stand in need of spectacular exploitation. The preparation will continue to bear with dignified modesty the encomiums of the medical profession and remain within the sphere to which it belongs.

Gynecologist and Obstetric Physician to Dr. Stevens' Hospital, Dublin; External Examiner in Midwifery, Royal University of Ireland; Examiner in Midwifery, Royal University of Ireland; Examiner in Midwifery, Royal College of Physicians, Ireland; Ex-Assistant Master, Rotunda Hospital; Ex-University Examiner in Midwifery and Gynecology, Dublin University.

In this work the author places before the reader, in a single volume, a comprehensive account of the theory and practice of modern obstetrics.

In doing so he has been assisted by eminent specialists as follows: Dr. T. G. Moorhead on Embryology and Anatomy, and on the Phenomena of Pregnancy and on the Anatomy of Contracted Pelvis; Dr. H. C. Drury on Infectious Diseases and on Organic and Functional Diseases of Pregnancy; Dr. R. J. Rowlette on the Aetiology and Pathology of the Surgical Fevers of the Puerperium, and Dr. W. R. Dawson on the Insanities of Reproduction. Dr. William Neville has written the chapter on the Surgical Fevers of the Puerperium.

A feature of the book is the large number and original character of the illustrations. Especially noteworthy are the drawings of the Mechanism of Labor and of the Obstetrical Operations, all made from photographs taken for the author.

The book is octavo and contains 1,184 pages, illustrated by 467 half-tone and line engravings, mostly original, and by nine full page plates.

**ARE YOU IN PAIN?**

**YOU** will probably ask this question more frequently than any other. To be able to relieve pain, whether it be a slight nervous headache or the most excruciating suffering from a severe neuralgia, brings the height of pleasure to both patient and attendant. The ideal remedy must not only do its work, but it must also do it quickly. Touching this point Prof. Schwarze (*Therapeutische Monatshefte*), writes upon the treatment of the forms of dysmenorrhoea associated with pathological anteversion, retroflexion in the virgin uterus, and the different forms of congenital deformity of the uterus. This class includes tenosis of the external and internal os and all forms of dysmenorrhoea in which no anatomical changes can be demonstrated. He believes the coal-tar analgesics are of use as well as the preparations of iron and sodium salicylate. Other practitioners find that it is necessary, in many cases, to administer codeine in small doses, and antispasmodics and codeine tablets would seem to have been especially prepared in its proportions for just these indications. **The codeine in these tablets is especially prepared, does not induce habit, is non-constipating and is chemically pure.**

## MARKS ARTIFICIAL LIMBS

Designed for all Amputations and Deformities of LEGS and ARMS

THE MOST DIFFICULT problem in adapting artificial legs to amputations is presented in the hip joint disarticulation; Furseaux-Jordan and other methods.

The pelvic socket artificial leg here illustrated is the most recent creation of the A. A. Marks' establishment. The socket is constructed to receive one-third of the pelvis. An artificial leg is attached to this socket so that it will articulate on the same axis as the hip on the opposite side. The leg is constructed with knee-lock, spring mattress rubber foot, and other improvements.

Persons walk acceptably, stand with safety, stoop and sit in a very natural way with one of these legs, although there is no stump to control the leg movements.

For particulars regarding artificial legs and arms adaptable to the most difficult and complex cases, read a

Thigenol is employed chiefly in skin diseases and gynecological affections.

## SYR. HYPOPHOS. CO., FELLOWS

**Contains the Essential Elements of the Animal Organization**—Potash and Lime;

**The Oxidising Agents**—Iron and Manganese;

**The Tonics**—Quinine and Strychnine] (each fluid drachm contains the equivalent of 1-64th grain of pure Strychnine).

**And the Vitalizing Constituent**—Phosphorus; the whole combined in the form of a Syrup with a Slightly Alkaline Reaction.

**It Differs in its Effects from all Analogous Preparations;** and it possesses the important properties of being pleasant to the taste, easily borne by the stomach, and harmless under prolonged use.

**It has Gained a Wide Reputation,** particularly in the treatment of Chronic Bronchitis, and other affections of the respiratory organs. It has also been employed with much success in various nervous and debilitating diseases.

**Its Curative Power** is largely attributable to its stimulant, tonic, and nutritive properties, by means of which the energy of the system is recruited.

**Its Action is Prompt;** it stimulates the appetite and the digestion, it promotes assimilation, and it enters directly into the circulation with the food products.

The prescribed dose produces a feeling of buoyancy, and removes depression and melancholy; hence the preparation is of great value in the treatment of mental and nervous affections. From the fact, also, that it exerts a tonic influence, and induces a healthy flow of the secretions, its use is indicated in a wide range of diseases.

### NOTICE—CAUTION.

The success of Fellows' Syrup of Hypophosphites has tempted certain persons to offer imitations of it for sale. Mr. Fellows, who has examined samples of several of these, finds that no two of them are identical, and that all of them differ from the original in composition, in freedom from acid reaction, in susceptibility to the effects of oxygen when exposed to light or heat, in the property of retaining the strychnine in solution, and in the medicinal effects.

As these cheap and inefficient substitutes are frequently dispensed instead of the genuine preparation, physicians are earnestly requested, when prescribing the Syrup, to write "Syr. Hypophos. Fellows."

As a further precaution, it is advisable that the Syrup should be ordered in the original bottles; the distinguishing marks which the bottles (and the wrappers surrounding them) bear, can then be examined, and the genuineness—or otherwise—of the contents thereby proved.

This preparation can be procured at all chemists and druggists, everywhere.

## Surgical Diagnosis

*A Manual for Practitioners of Medicine  
and Surgery*

By OTTO G. T. KILIANI, M.D.

Surgeon to the German Hospital, Member of the New York Surgical Society,  
of the Surgical Society of Berlin (Germany), etc.

Kiliani's Surgical Diagnosis is an essentially practical work, written from the standpoint of the general practitioner, since it is the general practitioner who must diagnose surgical affections, must determine as early as possible whether operative interference is indicated, and must be in a position promptly and wisely to advise his patients on this point.

The introductory chapter deals with various methods of examinations and the means of properly carrying them out. The book then proceeds to take up the subject in anatomical order, beginning at the Head. The salient points are emphasized by the use of heavy-faced type, while marginal notes give ready reference to the various topics. A large number of tables for rapid differential diagnosis are introduced in various parts of the book, and at the end are presented tables of identical symptoms found in various diseases. These will be found particularly useful.

Dr. Kiliani's book is illustrated principally by an unique series of X-Ray photographs of cases typical of the various forms of injury and disorder requiring surgical treatment.

### PRESS NOTICES

"It is a most excellent and valuable work, and will enable the practitioner to decide definitely and correctly many questions decidedly difficult as to whether an operation is advisable or not. The operations which may become necessary, and the selection of the particular operation, as well as the prognosis, have been mentioned only when important for the practitioner to know them when proposing operation to the patient."—*Southern Practitioner*.

"The book is essentially designed for the general practitioner, and is likely to serve an extremely useful purpose in calling his attention to conditions remedial in their early stages, but often past surgical help when they are referred for operative intervention. The book terminates with a series of ingenious and serviceable tables giving the identical symptoms found in various diseases."—*Therapeutic Gazette*.

## Wholesome Nourishment

the assimilation of which is never burdensome, is obtained by prescribing Pabst Extract. It is one of the wholly satisfactory nutrients that ably assists the physician who has patients worn down to low vitality. Sometimes it is also hard to establish a satisfactory convalescence after the main symptoms of a disease have abated. Light diet is essential and proper nourishment must be had.

## Pabst Extract

exactly fills the requirements without the slightest tax on the patient's strength. It is easily absorbed by the alimentary mucous membrane, acceptable to the stomach, and of high nutritive and metabolic value.

### TYREE'S ANTISEPTIC POWDER

WAR DEPARTMENT  
Surgeon-General's Office

Washington, D. C., Jan. 3, 1900.  
This is to certify that the exact antiseptic strength of Tyree's Fely. Antiseptic Comp. is one part of the powder to 50 of water (1:50). Test tubes containing peptonized beef broth were changed with the powder (Tyree's Antiseptic Powder). The solution was then inoculated with the Antiseptic Bacillus and with the Staphylococci of Pus and the tubes placed in the incubator for 48 hours at a temperature of 37° C. On removing the tubes from the incubator it was found that in the solutions of one to ten to one in fifty there was no development of Bacteria.

Formula on every box. Always insist upon getting original packages. Only the genuine Tyree's Powder reliable. Literature and trial sample free.

W. M. GRAY, M.D., Microscopist,  
Army Medical Museum.

THE smallest actual fact is better than the most magnificent statements of impossibilities. Tyree's Antiseptic Powder promises no more than it really does. It has been found extremely useful when applied to all mucous surfaces, external or internal—Vaginal, Urethral, Rectal, Nasal, Oral, Pharyngeal, Intestinal, etc. Dilutions up to one part in fifty are still germicidal; that gives great value and makes it economic. Its range of utility in the large field of antiseptics is wider than that of any other preparation.

## THE INFLUENCE OF GROWTH ON CONGENITAL AND ACQUIRED DEFORMITIES

By ADONIRAM BROWN JUDSON, A.M., M.D.

Orthopedic Surgeon to the Out-Patient Department of the New York Hospital, 1878-1903; Statistical Secretary and formerly Chairman of the Orthopedic Section of the New York Academy of Medicine; formerly President of the American Orthopedic Association; Member of the American Medical Association; Fellow of the American Academy of Medicine; formerly Surgeon U. S. Navy.

As the author says in his Introduction, the object of this work is not to add another to the list of several excellent systems and text-books, but to emphasize the point that prevention and cure are to be found in so managing a case and equipping a patient that natural growth will be the chief factor in recovery. This view, of course, does not by any means include all there is in orthopedic practice, but the thought thus expressed should be constantly borne in mind, as it is of the greatest practical value. The author's ripe experience adds to the work a stamp of authority that must carry great weight.

The titles of the chapters, which follow, give a good idea of the scope of the book.  
CHAPTER I. Congenital Club-foot; II. Deformities Caused by Infantile Paralysis; III. Tuberculous Joint Disease; IV. White Swelling of the Knee; V. Treatment of Hip Disease; VI. Abscesses of Hip Disease; VII. Diagnosis, Prognosis and Appreciation of Results of Hip Disease; VIII. Causes and Prevention of the Deformity of Hip Disease; IX. Pott's Disease of the Spine; X. ## THE "WIDER" CLINICAL SYRINGE

(OPEN)

It stands  
alone

### AN IMPROVED FOUNTAIN SYRINGE

THE WIDER SYRINGE possesses many points of superiority over the ordinary fountain syringe. It is open at the top the full size of the bag giving access to the contents for use of thermometer or mixing of solution, and making it easy to clean and sterilize. It has a broad, flat base and stands alone when filled, and the nozzle and tubing can be coiled neatly through the loop when not in use. When empty it can be folded flat. The graduation marks show accurately the quantity of contents, and by removing the hose from the outlet and substituting the small rubber cap it can be converted to a variety of sick-room uses; a pitcher, a basin, a measure, a male urinal. The flexible chain serving as a handle. A strong, durable, useful article of real worth. Made in 2 qt. and 4 qt. sizes only.
